This is an advertisement in the Graton & Knight campaign on Standardized Leather Belting. It appeared in the Saturday Evening Post, January 31, 1920.

Graton & Knight

Standardized Series Leather Belting

Tanned by us for belting use

A Forty-Seven-Year Belt

This twenty-four-inch Graton & Knight Belt has transmitted power on one drive for forty-three years. It withstood four years of neglect. Its efficiency today is unimpaired.

In 1872 the belt was placed on a water-wheel drive in a woolen mill at Central Falls, R.I. For thirty-three years it did its work well. The plant was shut down in 1903 and was not reopened until 1907, when the Central Falls Mazda Lamp Division bought the property.

Upon inspection the wheel-pit and part of the belt were found covered with rubbish. The belt was a sorry sight, and the first decision was to junk the mess. Cleaning operations, however, showed that the belt was practically uninjured. The power was turned on, the belt picked up its load, and has been carrying it ever since, driving a sixty-eight-inch pulley from a ninety-six-inch wheel.

That this veteran of forty-seven years is doing a youngster's work today is proof positive of the quality of Graton & Knight Tannage of Leather. In 1872, as now, Graton & Knight were making the right belts for the job to be done.

Graton & Knight have classified the requirements of every kind of power transmission, and make a standardized belt to meet every demand. Write for their book, "Standardized Leather Belting," which gives valuable information on belting power transmission.

Aloxite Saw Gumming Wheels

They Hold Their Shape

ALOXITE Saw Gumming Wheels stand right up to their work.

They hold their shape, insuring accurately ground teeth, uniform gullets.

They wear evenly because they are of just the right degree of hardness—just the right grade.

And at the time they are cutting fast, clean and cool.

Corbet Automatic Towing Machines FOR TUGS AND BARGES

Made in Five Sizes

Made in five sizes to accommodate flexible steel hawsers from $\frac{3}{4}$ in. up to 2 in. diameter. This is the most up-to-date and modernly efficient machine on the market to-day. It saves its cost in three seasons.

Corbet Automatic Towing Machines are the best that can be produced for Towing and Wrecking, and we guarantee them to give perfect satisfaction.

Write for full information to our nearest Agents.

RE-DRYING VENEERS

Proctor Automatic Veneer Dryer

Furniture and piano manufacturers and other users of veneers, who do not make the veneers themselves, experience considerable annoyance and trouble due to the moisture either left in the veneer by the manufacturer, or absorbed en route from the manufacturer to the user. Such imperfectly dried stock is the cause of a great deal of waste, not only in veneers, but also in time and labor.

It is found advantageous and profitable to use a Proctor Dryer through which all veneers are put before gluing. In this way, perfectly dried stock is always assured, and as a consequence perfectly glued-up work.

Oldest and Best

HOE

Chisel Tooth Saws

Choice of Lumbermen Everywhere

The even temper of these saws and the fine quality of steel from which they are made have proved Hoe saws reliable for nearly one hundred years.

More than one hundred thousand "Hoes" are to-day successfully sawing lumber in all parts of the globe. The Hoe Chisel Tooth Saw, invented 40 years ago, is still the best for cutting hardwood.

America's Oldest Saw Manufacturers

Rubber Goods FOR LUMBERMEN

Belting Our long experience in the making of Rubber Belts enables us to specialize on this line. "P.M.S.," "Special Drive" and "Lion" are our leading brands for power transmission.

Packings "Redstone" High Pressure Sheet Packing has proved by test that it will outlast any other similar packing on the market. We make Spiral and Ring Packings, etc., that are equally reliable.

Hose for Steam, Water, etc., in various grades, made especially to give satisfactory and economical service under different conditions.

Fire Hose One or more of our twenty brands of Fire Hose will be found, not only in the best equipped Factories, Mills, etc., but in almost every Fire Department in the Dominion.

Portable Saw Mills

THERE is one standing timber problem that has been considered more than ordinarily difficult to deal with, and that is the small or isolated tract, containing from half a million to several million feet. A more or less inaccessible location adds further difficulty to the problem.

It is out of the question to cut this timber and haul it to a mill at some central point, but it can be handled quite readily by adopting the other alternative, that of taking a mill to the timber, and the profit on such an operation will depend largely on the selection of the right type of mill, and the efficiency with which it is run.

For such an undertaking we have developed a portable mill which for capacity of output, strength of materials, and simplicity of design and operation we believe has no equal. The many expressions of satisfaction which we receive from customers strengthens this view. May we send you our catalogue?

The E. Long Manufacturing Co., Limited
Orillia Canada

Some Waterous Bandmill Advantages

1—It is built in 8, 9, and 10 ft. sizes—one for every kind of work.

2—The spring-cushioned, all knife-edged tension device is the most sensitive in use.

3—Upper and lower guides swing about the exact centre of the saw blade.

4—The upper guide is raised and lowered by steam, an accurate, easy and swift adjustment unequalled by any other.

5—Wheel raising device and tilting device are roller bearing.

6—All operating mechanism is enclosed within the columns—sawdust and slivers cannot reach it.

7—Massive design of bed and columns precludes vibration during cutting. This mill is absolutely steady doing the heaviest work.

8—Mandrel bearings, both upper and lower, are easily adjustable and align rapidly and accurately.

9—Every part of the mill is designed to make millwrighting easy and adjustments and inspections can be made without difficulty.

10—Waterous band mills are designed and built in a plant that has specialized in the manufacture of Canadian sawmill machinery for more than seventy years.

Every Minute is Money to You

That is why every minute you pay for should show a return in value. Without a printed record of your employees' time, there are always late comers, which means not only lost profit but costly delays. With an

INTERNATIONAL TIME RECORDER

You install "punctuality" and get it in printed form which cannot be disputed. There is an International to fit in exactly with your business. Keep a positive record of every man's time, and thus prevent disputes and protect your profits.

Write for full information.

Review of the Canadian Lumber Trade in 1919

First in Quality

American Woodworking Machinery Co.

Rochester, N.Y.

LONDON AGENTS—THE PROJECTILE CO.

American No. 77A—Model 5

Mr. LUMBERMAN:

Has your Superintendent or Foreman suggested or insisted upon the need of a fast feed matcher in your mill?

If so, have you investigated the qualities of "AMERICAN MACHINES"?

We suggest that you write to any of the following—All users and SATISFIED:—

T. H. Hancock ... Toronto.
Wm. Copping ... Joliette, Que.
Ladder Lake Lumber Co. ... Ladder Lake.
Prince Albert Lumber Co. ... Prince Albert, Sask.
W. C. Edwards Lumber Co. ... Ottawa, Ont.
Finger Lumber Co. ... The Pas, Man.
Can. Puget Sound Lbr. Co. ... Victoria, B.C.
Canadian Western Lumber Co. Fraser Mills, B.C.

Adams River Lumber Co. ... Chase, B.C.
Giscome Lumber Co. ... Giscome, B.C.
Mundy Lumber Co. ... Three Valley, B.C.
Mickle Dymment ... Gravenhurst, Ont.
Mickle Dymment ... Toronto.
Fassett Lumber Co. ... Fassett, Que.
Jas. La Francois Co. ... Quebec, Que.

And then if you still have doubts, talk it over with our Mr. Garlock.

Its superior points will quickly convince you of the advantages of installing an "AMERICAN."

Where Quality Counts

PRIDE in production is a great thing. It is the satisfaction of being able to apply the best facilities, seasoned knowledge, and honest effort to maintaining a standard in what you supply.

We feel that way about the quality of our

Red and White PINE

Like many others in the lumber industry, we have had to contend with difficulties this last month or two, but with the winter loosening up, we are rapidly getting back to old time regularity in deliveries.

Now is a good time for you to let us know what your requirements are in Pine—think it over.

WANTED

Early Cargo Shipments

Mills adapted to ship by water to Boston and Sound Ports are invited to place before us their specifications for Merchantable Spruce. Vessel loads of 150,000 ft. to 350,000 ft. can be placed most advantageously.

The following sizes preferred :-

1" Boards, Rough or Planed
2x3" p l e, 2x4" p l e, 2x5-6-
7-8-9-10 and 12" Rough
3x4" p l e--3x6" - 4x6" and 6x6"

*Lengths 8 to 20 ft.
or over.*

When writing please give full particulars as to average length of your lumber; quantity of different sizes can furnish, and quote price either alongside vessel, naming shipping port, or delivered. We are closing for April-May shipments now, but will consider June offerings.

THE WOODSTOCK LUMBER COMPANY

131 STATE STREET, BOSTON, MASS.

Quick Action

You Can Have It

Try the Canada Lumberman Wanted and For Sale Department. Have you anything you wish to buy or sell in the Lumber Industry? You will find this department inexpensive, and a very effective business getter.

Our Classified Advertisers do not repeat the ad, often. They don't have to. They report immediate results. Use these columns to your own advantage.

True Blue Service

WE are constantly striving to give our customers the greatest possible service—as our big Service Yard at Logansport indicates.

Furthermore, we sell only high quality lumber—for quality products are always best.

This service and quality are very real. They must be, because it is with them that we assure satisfaction. And every single one of our customers must be satisfied.

You will find it to your advantage to buy hardwood backed up by such service and of such quality that satisfaction is a foregone conclusion. And it is—when you buy of us.

The Significance of the Long-Bell Trade Mark

A trade-mark is an asset for a good article but sure death to a poor one. It is either an assurance of something good or a warning. In growing numbers both dealers and consumers are finding out that this trade-mark on lumber is the identification of products well worthy of their confidence—

LONG-BELL

The Mark on Quality Lumber

Lumbermen who are taking advantage of The Long-Bell Lumber Company's advertising by announcing that they carry its trade-marked lumber, timbers and creosoted products in stock are obtaining the fullest effect of this great campaign. To dealers we offer:

FREE ADVERTISING CUTS. (For newspaper advertising).
 FREE METAL SIGNS. (For the yard office).
 FREE LANTERN SLIDES. (For the motion picture screen).
 THE LONG-BELL BULLETIN. (A little monthly service paper containing merchandising ideas for lumbermen).

Write our Advertising Department concerning this service.

The Present Shortage of Dry Lumber

**Red Pine
White Pine
Spruce
Hemlock
Hardwoods**

is creating a difficult situation and shows to what extent lumber has been demanded for the world's urgent re-building requirements. Output has fallen short of demand and stock must be accumulated again in still bigger quantities to get back to a steady and continuous supply of dry lumber. Only those who are best informed as to available stock and are in close touch with sources of supply can fill requirements under existing conditions.

Send us your inquiries as we have a good assorted stock and will be glad to quote you our best prices.

Red Cedar Shingles

Western Crown Lumber Company
ROGERS BUILDING VANCOUVER

Announcement

The Shingle Agency of B. C. announces to the Trade the adoption of the "Square" as the packing and sales unit for Red Cedar Shingles manufactured by its members.

The date on which the new rule will go into effect has been fixed for April 1, 1920. After that date (as far as possible with regard to stocks on hand), shipments from the mills will conform with the new standard.

¶ Under the "Square" unit, shingles will be packed so that each unit contains sufficient shingles to cover 25 square feet of surface on a basis of a fixed standard of weather exposure. Four bundles will cover the popularly accepted decimal standard of 100 square feet.

¶ 16 in. Shingles will be packed 22-22 to the bundle and provide the surfacing unit of 25 square feet on the basis of 4½ in. exposure to the weather.

¶ 18 in. Shingles will be packed 18-18 to the bundle and provide the surfacing unit of 25 square feet on the basis of 5½ in. exposure to the weather.

¶ In adopting the "Square" unit rule, the Shingle Agency believes it is taking an advance step. It provides for the computation of surfacing on a basis which is easily understood by the consumer and conforms with the standard of measurement of the "square" which is generally accepted as the standard of measurement in all building and contracting operations.

Any special enquiries from dealers with reference to the new standard will be given prompt attention.

Many Eastern Canadian Firms have never used either WESTERN SOFT PINE or WESTERN YELLOW LARCH.

The extremely heavy demands for lumber in 1920 may force them to use these woods. We hope so, and also that some of our product may be available, for we know we will then have made many life long friends.

The MacLean Friction Feed Works

The Machine, which is mounted on two bearings, left and center, is a shaft on which is rigidly keyed a casting carrying the interchangeable center friction blocks. Loosely mounted on the shaft and on either side of center friction are two belt-driven frictions driven in opposite direction.

These frictions have 16 in. bearings, and are oiled through center of shaft.

The forward and reverse directions of carriage are obtained by engaging center friction with either of belt-driven frictions, which transmits the power through shaft and gear to drum.

The end-thrust is taken care of by bearings between end of side friction sleeve and main bearings. Any wear on blocks is followed up by adjusting main bearings in that direction. Frictions are engaged by shift lever at the right. Each friction has 188 square inches of contact surface engaged, thus insuring long life of blocks.

The feed is governed by the tension the sawyer puts on the lever. In many instances and conditions this machine has stood out and proven itself adaptable to all conditions.

GOOD YEAR MADE IN CANADA INDUSTRIAL HOSE

Tires Lowered the Cost of Hose

The policy which built the Goodyear tire business—and made Goodyears the largest selling tires in the world—has made possible lower costs for hose in industrial plants.

Hose built to fit the *needs* of many different industries.

Fabrics specially selected for hose. Rubber compounds brought to an exact, scientific standard. Construction governed only by the work the hose is to do.

Is it any wonder that Goodyear Industrial Hose is giving longer service; reducing hose costs; preventing delays due to repairing and replacing hose?

In foundry, paper mill, mine, railway, steel plant, and every other industry, Goodyear is setting new standards for hose.

Goodyear Industrial Hose will open up to you new possibilities of economy, increased production and hose satisfaction.

A man trained by Goodyear in hose problems will gladly call upon you without obligation:

Just 'phone, wire or write the nearest branch.

Nature Gave the Flavor You Enjoy in Klim

Immediately you taste Klim your palate notifies you that "it has exactly the same flavor as fresh separated milk." You wonder "how they produce this taste." The truth is we don't—Nature does. The unmistakable fresh separated milk taste is in Klim because it was in the new clean milk that came to one of our five plants from a nearby farm. The "Spray" process which we use to remove the water from this separated milk does nothing else. It simply puts it in condition to travel long distances and to keep indefinitely without refrigeration. It does not alter the flavor or lessen the food value. So when you whip Klim into water you merely restore the milk solids to their original liquid state.

Klim tastes genuine because it is genuine.

It is the only form in which you can get this natural flavored separated milk for your camp. Klim is a dry powder that will not spoil and will not freeze in coldest weather. It occupies only a fraction of the space of any other form of milk, is cheaper, more convenient to use, and permits your having a whole season's supply brought into camp in one shipment.

Use Klim regularly in the cook house. It improves the flavor and food value of cooked and baked foods, tea, coffee and cocoa, and may be used as a drink. Your men will enjoy Klim, and you'll be money in pocket.

10 lb. tins for camp use — 6 tins to a case

1 lb. tins for home use — 24 tins to a case

At all wholesale and retail grocers.

Try a tin in your home. You will quickly recognize its value for your camps.

Original "Dunbar" Machines

We are the original and the only makers of "Dunbar" Shingle Machines, Lath Machines, Clapboard Machines, Steam and Gasoline Logging Engines. Each is the best for its particular work. Are you using the best?

Lath Machine

From our many years of experience we evolved this "Dunbar" Original Lath Machine. Every improvement that could be suggested, every time-tested idea for the betterment of product and for greater speed, has been incorporated in this machine. We believe it has no equal, and there are a great number of mill men throughout Canada who share this belief with us. Carefully constructed of high grade materials and designed to work steadily under the hardest conditions.

Steam and Gasoline Logging Engines

Conditions in Canada necessitate an engine that will stand any amount of strain and hard work in the lumber industry. With this idea in mind we have brought out the "Dunbar" engines perhaps a little stronger than is really needed. They do their work easily and willingly, and stand a great amount of hard usage. Built entirely in Canada for the Canadian lumber trade.

Clapboard Machine

You will need no excuse for the quality of your product if you use the original "Dunbar" Clapboard Machine. Expert in every detail. This machine will give you the very best service under most trying conditions. It will turn out work without delays. It will need practically no repairs and will increase your output. We cannot recommend it too highly because it is giving this very service to lumbermen in all parts of this country.

Send for catalogues of any or all of these machines.

DUPLEX TRUCKS

BUILT FOR BUSINESS

The Duplex Limited

BUILT to handle a normal load of 3000 pounds or a maximum of 5000 pounds, including body, at a speed limited only by legal restrictions—or from 5 to 30 miles on high.

Such speed in the Duplex Limited does not depend upon ratio but upon engine power—greater power in fact than is usually specified in trucks of equal capacity.

The Duplex Limited was constructed in response to the insistent demands of Duplex owners and dealers for a general purpose two-wheel drive, medium capacity Duplex Truck designed and built to the high mechanical and proven service standards of the famous heavy duty 4-Wheel Drive Duplex.

And the Duplex Limited is worthy of the Duplex name—for it is a Duplex, every inch of it, from tail light to radiator cap.

4-Cylinder, enclosed type motor—water cooled—cast en bloc Bore 4", Stroke 5 1/4", 3 Point Suspension, Pneumatic Cord tires. 145" wheel base. Equipped with Windshield, Electric lighting and starting; Ammeter; Boyce Motometer; Speedometer; Electric Horn; Tools; Jack; Rim Wrench; Front fenders; Alemite Grease Gun. Driver's seat without extra charge. (Power Tire pump at extra charge.)

DUPLEX
BUILT
FOR BUSINESS

The Outstanding Success of the

Duplex 4-Wheel Drive Truck

is an Admitted Fact in the Lumber and Logging Industry Today

THE conditions under which trucks in the Lumber and Logging business must operate; the character of the loads; the roads; the fact that here trucks need to run steadily and surely without tinkering and fussing—these things call for stamina and endurance in the trucks.

You know that no ordinary so-called commercial truck can work in the Lumber and Logging fields successfully over any satisfactory period of time.

That is why for years after the development of the motor truck many lumbermen still used horses and mules and did it because the average truck couldn't meet their requirements.

It is the consensus of opinion among lumbermen who have had experience with trucks that the Duplex 4-Wheel Drive is a very safe truck to buy.

The Duplex 4-Wheel Drive has pull and power in all four wheels. This overcomes the tendency of the rear wheels to swerve; stop skidding and keeps the truck going steadily so long as any one wheel can find traction.

It has 14 inches clearance—enabling the Duplex 4-Wheel

Drive to haul over roads with ruts so deep as to be impossible for any truck with average 9 inches clearance.

Another feature of great practical benefit is the fact that the Duplex Gear Housings are on top of the axles—no danger of damage while the truck is passing over roads with deep ruts or stones or stumps.

Roads or no roads—the Duplex 4-Wheel Drive Truck keeps moving.

Talk to the Duplex dealer near you. He knows what the Duplex can do and *is doing* in your line of business. And he has the facts and records to show you.

Buy your truck on actual knowledge. Make other lumbermen's experience yours to profit by. Buy a Duplex 4-Wheel Drive. You'll get a truck that you can use.

Single copies 15 cents.

"The Canada Lumberman and Woodworker" is published in the interest of, and reaches regularly, persons engaged in the lumber, woodworking and allied industries in every part of Canada. It aims at giving full and timely information on all subjects touching these interests, and invites free discussion by its readers.

Advertisers will receive careful attention and liberal treatment. For manufacturing and supply firms wishing to bring their goods to the attention of owners and operators of saw and planing mills, woodworking factories, pulp mills, etc., "The Canada Lumberman and Woodworker" is undoubtedly the most direct and profitable advertising medium. Special attention is directed to the "Wanted" and "For Sale" advertisements.

Authorized by the Postmaster-General for Canada, for transmission as second-class matter.

Entered as second-class matter July 18th, 1914, at the Postoffice, at Buffalo, N. Y., under the Act of Congress of March 3rd, 1879.

No. 6

The Forward Movement in a Great National Industry

The evolution through which the lumber industry passed during 1919 in the various provinces of Canada, is graphically presented in special articles in this edition—the Annual Statistical Number—of the "Canada Lumberman." From nearly every quarter comes encouraging news, not only of an increasing cut but of values more in sympathy with the augmented cost of production. The outlook is regarded favorably by leading exponents of the trade, and apparently 1920 will be a banner year, not only in the matter of output but in turn-over, distribution and requisitions.

There does not loom up any serious obstacle in the pathway of progress unless labor becomes unduly extortionate in its demands, or there should be a complete subsidence of the building programme in the various cities and towns. This, however, is not likely as the call for houses is insistent and the industrial demands of the various communities must be met. Greater production is the crying need of the hour and this applies with equal force to the manufacture of forest products as well as any other enterprise. The most careful estimates place the augmented output for 1920 at 25 per cent., while the most conservative ones admit that there will be a gain of, at least, 10 per cent. Even when these figures are taken into consideration, the relative cut will be small compared with that of normal times or in the three or four years which preceded the outbreak of European hostilities.

The question, which is being asked on all sides is "Has the peak of prices been reached?" On this opinions differ widely, and the trend of quotations is still determined by supply and demand. It is not probable that the supply will adequately meet existing needs for, at least, two years, and the query once more arises—"Will price levels be maintained, rise or fall?" Authorities, who have given close study to the situation, admit that the tendency is still upwards and, while the manifestations may not be as pronounced as they were a few weeks ago, the predicted "break" has not come. The demand develops and the shortage of dry stock increases.

Probably the price solution, so far as Canada is concerned, will not alone be governed by supply and demand but also by the rate of exchange, the requisitions for export, the availability of tonnage and the general reconstruction programme in Europe. The situation is so complicated and fraught with so many underlying conditions that it is not safe to make any predictions. It is a case of where one man's opinion may be as valuable and helpful as that of another.

It is said that those who are "lookers-on" see most of the game; that they get a fuller and larger comprehension of the intricacies and superior points of the play than do those who are actually engaged on the field. While this may be true in an athletic sense, neither the "looker-on," the "butter-in" nor the "getter-out" can venture an authentic statement regarding the oft-repeated interrogation—"Will prices descend?" "have they reached the peak?" or "has the peak been passed already?"

The speculative is always interesting—That, which is likely to happen, arouses more concern than that which has passed or is with us at the present time. At this juncture, speculation is, in the language of one Western operator, neither advisable nor desirable. It is freighted with many pitfalls, and he, who seeks to explore the course for others and steer them clear of the snags, may himself be the first to fall a victim.

In the meantime, a feeling of optimism prevails, and in the words of the retiring president of the Canadian Lumbermen's Association, the manufacturers of wood products can point with pride to their record during the war. It should be their mission to carry on the great industry they have inherited, working together in harmony and close brotherhood, with their faces turned toward the light and full appreciation of their responsibilities in the great process of national reconstruction.

The attention of Canadian lumbermen is now being directed toward greater production during 1920. They are anxious to do their part in relieving the present pronounced shortage in forest products. With each succeeding year new problems crop up for adjustment and solution. Twelve months ago the duty that lay nearest at hand seemed to be selling what lumber was on stick and arranging facilities for its export. To-day there has been a complete reversal of conditions, and the chief topic of the moment is to meet the abnormal call coming from domestic centres and across the border. The lumberman can be depended upon to play his part faithfully, earnestly and patriotically.

Greater Production in Georgian Bay Area

The Pendulum in Lumber, Lath and Shingles Swings Slightly in the Way of an Increase—What Returns From Various Districts Show

After several years of an annually decreasing cut in lumber, lath and shingles, the returns gathered from the Northern Ontario and Georgian Bay districts indicate that the pendulum of production in the wood products line is beginning to swing the other way. True, the increases, as revealed by the figures sent in from the different sections are not large, but the fact that there are gains—small though they are—reveals that there is a "forward movement" in the manufacture of lumber, and with the excellent logging conditions which have prevailed this winter it is believed that the cut during 1920 will average from 15 to 25 per cent. more than during 1919.

The decrease in recent years has been owing to the abnormal conditions created by the war, the shortage of labor, the ascending cost of production (but not in prices), absence of export, frequent embargoes upon the railways, etc. These deterrent factors have now largely been removed, the demand is great and values increasing. These causes are naturally favorable to augmented production, and it is expected that 1920 will witness the biggest year in lumber, lath and shingles since the outbreak of the war.

According to statistics gathered by the "Canada Lumberman" from the Georgian Bay and Northern Ontario districts, the total cut in 1919 amounted to 520,349,483 board feet, as against 514,617,918 in 1918. This is an increase of 5,731,565.

In lath, the output in 1919 was 124,066,403 pieces, as compared with 109,615,481 in 1918, an increase of 14,450,922 pieces. Had many firms foreseen the scarcity of supplies and the sharp advance in quotations for lath, there would doubtless have been many more million pieces produced. A number of plants did not operate their lath departments at all, preferring to sell their mill slabs for firewood. It was not expected that the requisitions would become so insistent and such a top notch figure paid for the thin pieces of white pine and spruce which, for many months, had been practically at a standstill, so far as turnover was concerned.

In shingles there was also a steady demand, and, while the production in Ontario was small, it shows that, in the Georgian Bay and Northern Ontario districts, the number turned out in 1919 was 6,725,000 pieces, as compared with 4,937,000 pieces in 1918, an increase of 1,788,000 pieces.

It is pleasing to record that for the first time in several years the mills around the Georgian Bay and up north are beginning to turn the scale of production the other way. As already stated, the increases in lumber, lath and shingles have been limited. There is no doubt that during the coming season the record will be a much better one, and things are headed in the right direction.

The following are the statistics in detail. They are as accurate and representative as it has been possible to obtain. In cases where no figures have been received, an estimate of 1919's production has been made, based upon that of the former year.

Georgian Bay and Northern Ontario Production

	Lumber	
	Feet 1919	Feet 1918
Bear Lake	1,250,000	2,500,000
Bala	2,000,000	2,000,000
Biscotasing	3,000,000
Boakview	1,500,000	1,400,000
Bracebridge	5,840,000	6,045,000
Burks Falls	5,000,000 (est.)	4,900,000
Byng Inlet	22,500,000	22,000,000
Cache Bay	16,000,000	20,000,000
Callender	16,412,113	13,104,062
Chapleau	5,296,794	5,051,986
Chatham	2,600,000
Cutler	32,000,000	41,300,000
Espanola	7,000,000	5,000,000
Fenelon Falls	1,250,000
Field	4,250,000	3,500,000
Foley	3,000,000	3,000,000
Fort Frances	60,593,720	83,207,500
Gravenhurst	7,000,000	7,250,000
Huntsville	8,610,000	6,940,000
Jacksonboro	5,200,000	4,910,000
Kearney	1,800,000
Keewatin	23,612,683	23,928,725
Kitchener	1,300,000	1,000,000
Laforest	5,000,000
Latchford	1,500,000	1,000,000
Little Current	12,000,000 (est.)	13,000,000
Marksville	1,882,418	1,900,000
Marmora	2,320,622	1,850,000

Midland	40,300,000	39,550,000
Milnet	8,000,000	8,000,000
Monteith	4,000,000	4,500,000
New Liskeard	4,000,000 (est.)	3,500,000
Nestorville	18,000,000	16,000,000
North Bay	6,525,919	17,590,899

Total	124,066,403	109,615,481

Shingle Output Shows Increase

In the shingle line the total output from the mills reporting in Northern Ontario and the Georgian Bay District was 6,725,000 pieces, as compared with 4,937,000 pieces in 1918. The increased production is thus 1,788,000 pieces.

Among the districts which turned out the largest number of shingles were the mills in Bracebridge, with an output of 2,500,000, and Owen Sound 1,500,000, while fairly satisfactory reports came from Kearney, Marmora and the North Bay section. The demand for shingles was particularly brisk during the last half of the year, owing to the impossibility, in many cases, of getting shipments from the West, and the fact that severe windstorms unroofed a number of farm buildings in various parts of Ontario, and otherwise played havoc with structures in the line of sheds, houses, etc.

The annual production for all British Columbia mills during 1919 was 2,412,054,000 shingles, valued at \$12,801,564, or an increase over 1918 of 339,286,000 and an increase in value of \$4,764,674 over 1918.

Exports of Wood Products in East

G. C. Woodward, of the American Consular Service, Campbellton, N. B., reports that the value of wood and wood products exported from the Consulate at Campbellton and Agencies in Bathurst, N. B., and Gaspe, Que., for the calendar years 1918 and 1919 were as follows:

	1918	1919
Campbellton, N. B.	\$1,382,290	\$1,767,668
Bathurst, N. B.	3,331,460	2,281,922
Gaspe, Quebec	398,666	688,768

Ottawa Valley Lumber Cut Shows Decrease

Decline During Past Year was over 56,000,000 Feet—Lath also Fell Off but Shingle Production Evidenced Considerable Gain—Outlook is Bright

By Everett Andrew, Ottawa, Ont.

A further drop of over fifty-six and a quarter million feet in lumber as compared with 1918, and which is 130,380,987 feet less than was produced in 1917, is shown in the latest production figures furnished the "Canada Lumberman" for the season of 1919, by the Ottawa Valley mills. On a percentage basis the output of the 1919 season was around twenty-five per cent. below that of 1917, and as compared with preceding season of 1918 was between fourteen and fifteen per cent. lower.

The production of lath decreased by approximately half a million pieces, but shingles came back strong with an increased production of nearly fifteen and a half million pieces, which almost doubled the 1918 production. The exports of lumber products from the Ottawa Consular District to the United States, while showing a decrease in lumber of over sixty thousand feet, on the aggregate picked up in value, to the extent of over a quarter of a million dollars.

Unfavorable in some respects as the above may indicate, there is no valid reason why lumber operators in the Ottawa Valley should get downhearted. The outlook is bright, and profitable to those who hold stocks at the present time. This year's woods programme is not living up to its previous "reputed" reputation, and, while the log output may increase in the Valley in 1920, it cannot (unless some miracle occurs) meet the present demand or attempt to replace the stocks of other years. Never within the last two decades or more have reports indicated such a shortage. At the same time it must be borne in mind that the shortage is created by the law of supply and demand, and without much direct interference by strictly commercial and speculative European export.

One of the reasons given, as partly explaining the present scarcity of stock, is the large purchase made throughout the Valley some time ago by Sir James Ball, the British Timber Controller, and M. L. Meyer, British Timber Buyer. The real and most likely explanation of the shortage (as shown by the subjoined reports), is that there has not been the log production of pre-war years, and that the demand, growing suddenly, has cleaned up surplus war stocks, and left the market more or less dependent on the output in the woods from year to year. During the European hostilities it is well known that formerly large reserves of logs were heavily called upon, and with the post-war demand asserting itself, the old reserves are not there to fall back on to meet it.

Various explanations or reasons as to cause for the shortage could be given indefinitely, but the outstanding fact is that the stock is not at hand, and furthermore, the visible log supply does not warrant any over-production. Happy is he who hath logs near his mill so he can begin sawing in May.

Present Stocks and General Outlook

Taken all around for the Valley the reports clearly indicated that the companies were attempting to get out a bigger log cut. Some firms estimated the expected increase to be between fifteen and twenty per cent. over last year, and one or two intimated the increase aimed at would be thirty per cent.

The volume of trade was greater on the whole than in 1918 and, on a percentage basis with the different mills, ranged all the way from fifteen to thirty per cent. On the question regarding prices the general feeling is that the prevailing quotations for the first six months of 1919 were not as good as those which held sway in 1918, but during the last six months of the past year conditions changed and prices improved. With some companies, however, this change had little or no effect as most of their lumber was sold early in the year when values were down.

Stocks, according to the different companies, were reported all the way from "less" or "being about the same" to fifty per cent. less than the previous year.

The market for shingle and lath was quite similar to that of lumber. During the early part of 1919 the movement was slow, but toward the close business showed a surprising pickup and almost any price could be had for lath, but by that time most of the mills had sold and all the output was practically in the hands of the dealers.

In connection with woods operations, it was generally reported that all firms were anxious to get an increased log output this winter but that, at the commencement of operations, men were not available. Owing to the high wages paid those, who did go to the camps, did not put in as long a time in the bush as usual. Camps were late in

filling and many lost a large proportion of their men at Christmas, who did not return.

One report received from a leading company, while expressing the sales outlook for 1920 as being bright, ventured the opinion that the following price, f.o.b. the mills, would prevail in the Ottawa market this year: Hemlock \$40 per M., spruce \$50, and pine \$60.

Wages paid in the woods were generally reported to have increased from 35 to 40 per cent., and the cost of food from 20 to 30 per cent.

The outlook for the future is promising, indicating increased sales, higher prices, and general all round good business if the stocks can be secured.

Ottawa Valley Lumber Production

Canada's Timber—What She is Doing With It

First Great Essential is Adequate Protection from Fire—How Highest Permanent Production Consistent with Economic Conditions Can be Secured

Clyde Leavitt, of Ottawa, Chief Forester of the Commission of Conservation, at the recent annual gathering of that body held in Montreal, presented an admirable and edifying report in regard to logging, lumbering, forestry and reproductive conditions of the timber wealth of the Dominion, which will be read with much timely interest. The recommendations made by the Chief Forester evidence much research, care and investigation and show that there is an inadequate public appreciation of the vital part which Canada's great forests are playing in after-the-war reconstruction. This contribution to the public welfare is particularly notable in connection with the building up of a great export trade, thus largely ameliorating the serious effects of the adverse balance of trade with the United States, as reflected in the unfavorable exchange situation. According to the Bureau of Statistics, exports credited to the lumber in-

as roads, trails, lookout stations and mechanical equipment for transportation and fire fighting.

Elimination of Waste in Logging

Aside from fire protection, there is still much to be accomplished before our forests can be placed upon the basis of the highest permanent production consistent with existing economic conditions. There should be fuller utilization of the merchantable content of trees and elimination of all unnecessary waste in logging. In the mixed hardwood-softwood forests of eastern Canada, some method should be found for transporting and utilizing the great quantities of hardwoods, particularly birch, which are so greatly retarding the growth of the coniferous reproduction. In the pulp and paper industry, there is still in some quarters a prejudice against the full utilization of balsam in paper-making. That balsam can be used practically indiscriminately in mixture with spruce has been proved beyond question by the experience of many companies, and its full utilization should be enforced by company managements generally, as well as by governmental authority.

The wider use of thoroughly practical men with forestry training is essential, in both governmental and private employ, that adequate attention may be given the vital question of how best to regulate cutting methods, with a view to leaving cut-over lands in the best possible condition to produce another crop. That is the very essence of forestry.

New Brunswick has to-day one of the most progressive forest services in Canada. It has been developed by practical men along practical lines. The benefit to the province in a financial way is indicated by the fact that during the fiscal year 1920, the forest revenue to the provincial treasury will be around \$1,500,000, which is nearly equal to the forest revenue of Quebec and within a few hundred thousand dollars of the forest revenue of Ontario. This is triple the amount received during the fiscal year 1917. Much progress has been made along the lines of forest protection and in the reduction of unnecessary waste of merchantable material in logging. The Commission of Conservation has co-operated with the provincial Government in the soil classification and also in forest research work, of which one feature was an experimental cutting upon the lands of the Bathurst Lumber Company, the co-operation of this company being also involved.

In Nova Scotia, the outstanding need is for the appointment of a Provincial Forester. This matter is now under consideration by the provincial Government.

Splendid work of Protective Association

In Quebec, the four forest protective associations are doing splendid work, though still better results could be secured were more funds available. Outside Association territory, the patrol organization of the provincial Forest Service is being materially expanded and additional equipment provided. The Forest Service is working toward a policy under which cutting methods on Crown lands shall be in accordance with specific plans prepared at least a year in advance of operations, on the basis of studies made on the ground by trained foresters of long practical experience. The idea is to modify the cutting restrictions according to local conditions, as of course is highly desirable where an adequate staff of trained men can be provided. Considerable attention is given by the Forest Service to land classification in advance of settlement. The Laurentide Company and the Riordon Pulp and Paper Company have embarked upon an extensive program of planting up portions of their holdings of privately owned lands. An attempt is being made by the Provincial Government, in consultation with pulp and paper companies, to develop a policy for the reforestation of denuded Crown lands, on a co-operative basis. It is to be hoped that some such plan may be made effective.

The outstanding need of the situation in Ontario is the extension of the responsibilities of the provincial Forestry Branch to cover at least the technical features of administration as applied to all Crown timber lands. In this vital matter, Ontario has thus far lagged behind the other forest provinces, with the exception of Nova Scotia, the forest having in the past been regarded primarily as a source of revenue only, with no particular consideration for its perpetuation. Technical administration of Crown timber lands is absolutely essential, if the forests of the province are to continue to play

Clyde Leavitt, Ottawa,
Chief Forester, Commission of Conservation

dustry for the calendar year 1919 total \$93,000,000. Exports of pulpwood, pulp and paper are now at the rate of over \$100,000,000 annually. In both cases, the great bulk of the exports went to the United States.

In the course of his summary and recommendations Mr. Leavitt says:—

The Dominion and provincial governments have wisely adopted the policy of requiring home manufacture of pulpwood cut from Crown lands. Without this policy, and in view of the rapidly approaching exhaustion of the pulpwood resources of the north-eastern states, virgin supplies accessible to Canadian mills would be in great danger of rapid exhaustion, with most serious later effects upon our industrial fabric.

There is an increasing appreciation that the forest is a crop, which may be reproduced by wise use, as well as by planting. While an increasing development in forest planting is to be anticipated, it is nevertheless inevitable that for an indefinite time to come, the perpetuation of the forest upon the great bulk of our non-agricultural lands must depend upon natural regeneration.

To secure satisfactory results in the perpetuation of our forests by natural regeneration, the first great essential is adequate protection from fire. While great progress has been made in this direction during recent years, much still remains to be accomplished. Appropriations must be increased, and, particularly in the governmental organizations, more attention must be given to the development of a thoroughly competent field personnel through the payment of larger salaries, a larger percentage of year-long employment, the abolition of political patronage in the selection of men, and the development of permanent improvements such

their proper part in contributing revenue to the provincial treasury and in maintaining the great wood-using industries of Ontario. Any efforts of the provincial Government in this direction should meet with the fullest degree of public support.

The question of reforestation is also under consideration in Ontario, involving as one feature, possible co-operation between the municipalities and the province in the acquisition and planting of non-agricultural lands, particularly areas liable to damage by drifting sand, in the older-settled portions of the province. This is to be commended, and is also a moderate beginning in the reforestation of denuded Crown lands. So far, however, as a general forestry program is concerned, it must be recognized that the problem of infinitely greatest importance is the stopping of the process of devastation, which results in the unnecessary annual destruction by fire of hundreds of millions of young trees, established by nature upon cut-over lands. So long as it is a question of funds, adequate fire protection must be the first consideration.

The Father of Scientific Forestry

A tribute is due Dr. B. E. Fernow, who has retired from active service as Dean of the Faculty of Forestry at the University of Toronto. Dr. Fernow has from the organization of the Commission of Conservation been one of the most active and useful members of the Committee on Forests. It is not too much to say that he is the father of scientific forestry in both Canada and the United States.

As to Dominion lands, it is to be hoped that action may now be taken by the Dominion Government, to add to the permanent forest reserves the very considerable areas in the northern portions of the prairie provinces and in the Railway Belt of British Columbia, which have been found upon careful examination to be chiefly valuable for permanent timber production.

Alberta is now the only forest province which does not have legislation providing for the permit system of regulating settlers' clearing fires. The results of this system have been uniformly excellent wherever it has been made effective. It is to be hoped that some basis may be found whereby it may be made applicable also to northern Alberta, so far as this may be essential to the protection of present and proposed forest reserves. The provincial Government is to be congratulated upon the enactment of legislation, last winter, providing for fire protection by provincially chartered railway companies, along their lines. The Commission of Conservation and the Canadian Forestry Association were active in advocating this legislation.

The Worth of Forest Laboratories

The Dominion Forest Products Laboratories, maintained at Montreal, under the Dominion Forestry Branch, in co-operation with McGill University, have rendered most valuable public services in both war and peace. Through an inadequate salary scale, these laboratories are now greatly disorganized by loss of personnel. It is greatly to be hoped that the reclassification of the Dominion Civil Service now under way, may render it possible for these laboratories to be reorganized on an adequate basis. The branch laboratory at Vancouver, maintained in co-operation with the University of British Columbia, has also done valuable work and should be continued.

The British Columbia Forest Branch has undergone a complete reorganization which, with the increased salary scale made effective places it in an admirable position to render increasingly valuable services to the people of the province. Material progress is being made in the disposal of logging slash, particularly in the Coast district. The outstanding need at present is for the establishment of a full-fledged Department of Forestry in the University of Vancouver. The present large provincial forest revenue of more than \$2,700,000 amply justifies the appropriation of the comparatively small sum required for this purpose.

Survey of Ontario's Timber Resources

The survey of the forest resources of Ontario, by the Commission, is under way, in co-operation with the provincial Government. Timber owners are co-operating splendidly in furnishing specific information with respect to their holdings. Only totals of estimates by large drainage areas will be published, so that detailed information furnished confidentially will not be divulged. The project is under the immediate direction of R. D. Craig, assisted by G. H. Edgecombe and A. V. Gilbert. It has been endorsed by both the Canadian Lumbermen's Association and the Woodlands Section of the Canadian Pulp and Paper Association.

The forest research program of the Commission has been continued and extended, under the immediate direction of Dr. C. D. Howe, assisted, as party chiefs, by C. R. Mills, G. A. Mulloy and W. M. Robertson. This project has received the endorsement of the Canadian Lumbermen's Association and of the Woodlands Section of the Canadian Pulp and Paper Association. Co-operation was continued with the Laurentide and Riordon Companies in Quebec, and established with the Abitibi Company, in Ontario. In New Bruns-

wick, Dr. Howe supervised the work of a research party maintained by the provincial Forest Service, and arranged also for joint co-operation between the Commission, the Forest Service and the Bathurst Lumber Company, in an experimental cutting on the limits of the latter. Cutting on about 300 acres has been completed, to different diameter limits, in addition to clear-cutting. Logging slash has been lopped, burned, and left on the ground untouched, on different plots. The results will be carefully observed through a period of years. Another experimental cutting, also involving slash disposal, was made in the upper St. Maurice limits of the Laurentide Company, involving co-operation between the company, the Commission and the Quebec Forest Service.

These several individual projects include all or part of such lines of investigation as growth studies, regeneration studies and permanent sample plots. They have for their object not only the determination of the rate of growth of the different coniferous species under given conditions, but also the extent to which the various species are being reproduced naturally and the conditions which are favorable to the reproduction of the more valuable species, particularly spruce. This knowledge is at present largely lacking, but the need for it is obvious if our forests are to be intelligently regulated with an eye to the greatest possible permanent production. Its prospective value is indicated by the fact that the Commission has more offers of financial co-operation from pulp and lumber companies along these lines than the limitations of its appropriation will permit it to accept.

The Piling and Burning of Slash

A number of experiments in the disposal of logging slash, principally by piling and burning, have been conducted recently in eastern Canada, either by pulp or lumber companies independently or in co-operation with some other forestry or forest-protective agency. Most of these experiments were on a comparatively small scale. The results thus far have proved rather discouraging, on account of the high costs in most cases. However, with wages for woods labour somewhere near normal, the costs would obviously be more reasonable. There are many difficulties to be overcome, such as the possible lack of co-operative spirit on the part of local employees, the lack of experience in this line of work, and incomplete knowledge of the best methods of organization. Further experiments should obviously be made and on a larger scale. The Dominion Forestry Branch requires slash disposal on its timber sales operations in the west, as does, for the most part, the United States Forest Service on the National Forests. Until at least partial action along these lines can be developed in eastern Canada, it will obviously be wise for the provincial governments to move slowly and cautiously in the direction of reducing diameter limit restrictions, on account of the greatly increased amount of logging slash that results from each step in the direction of clean cutting, with consequent great increase in the fire hazard and damage to young growth.

Possibilities of Aerial Patrol

The use of aircraft in forest fire patrols and forest mapping constitutes a field of large possibilities. It is to be hoped that the Air Board may be able to carry out its tentative program of experiments during the coming summer, in various parts of Canada. It is of the greatest importance that both the possibilities and the limitations be fully determined, as also the costs. While it is not believed that air patrol can displace existing ground organizations, except in part and then only under favorable conditions, it should be able to reduce the necessity of further large extensions of ground organizations, and to greatly increase the effectiveness of forest fire protection,—all provided that the cost does not prove prohibitive, as it is believed will not be the case. It is significant that the United States Air Service is requesting authority for a large program of air patrol over the forests of the western States. To the St. Maurice Forest Protective Association is due the credit for the first experiments along these lines in eastern Canada. The possibilities of aircraft in forest mapping appear decidedly encouraging.

Due to the ravages of the spruce bud worm, probably 25 per cent of the balsam in Quebec has been destroyed and 75 per cent of the balsam in the southern half of New Brunswick. The Entomological Branch should be granted adequate funds for the study of this pest, that future infestations may be minimized so far as practicable.

The preliminary study of the balsam butt-rot, conducted for the Commission by Dr. W. H. Rankin, shows that great damage is being caused by this parasitic fungus. The indications are, however, that on cut-over lands, where the growth of the young trees is not so retarded by overhead shade as in the virgin forest, liability to this disease will be materially reduced. To that extent, the outlook for the future is encouraging. It is greatly in the public interest that the Department of Agriculture should make a sympathetic study of forest tree diseases, comparable to the splendid work of the Entomological Branch in forest insects. The former line of work has scarcely been touched as yet, in Canada.

Big Year in Lumber Exports from Montreal

Feature was Heavy Purchase by British Government—Local Market was Active and American Demand Keen—Coming Season will be Brisk One

For review purposes last year's Montreal lumber trade may be divided into two sections—first a dull period and then a brisk period. But whether quiet or busy, prices held very firm, and toward the end of the year reached a point which some lumbermen described as preposterous.

Taking everything into consideration, the year might be described as satisfactory,—of course, the supply of lumber was restricted, owing to the shortage in the cut, the scarcity of men, and their comparatively slow production; while the high wages and enormous increase in the cost of camp provisions made for dear lumber. The local market improved, American orders were good, the export trade brisk, the B. C. section fair, pulpwood firm at the end of the year, and the pulp and paper markets strong. The market was affected in the early part of the year by a poor demand for structural purposes, while the factors which influenced business in the latter months were more activity in general business, a semi-boom in building locally and in the United States, and the growing shortage in lumber, with a higher range in values.

The Great Scarcity of Lath

One feature was the pronounced revival in lath. In 1918 lath was dull and weak,—in fact, wholesalers found it very difficult to get rid of stocks at almost any price. The result was that manufacturers failed to make lath in the usual quantities, and when a strong demand set in, owing to a revival in building, stocks were short, and prices advanced to an unprecedented extent.

B. C. lumber rose sharply under the stimulus of the demand for American account on the Coast. The exchange situation by which the mills secured a premium on goods sold across the border naturally made American business attractive. Stocks were none too plentiful, and the market position varied to such an extent as to make it very difficult to gauge events.

The American section was on the whole, satisfactory. For a time trade was slack, but with a revival in building in the Eastern states, orders became very plentiful.

Hardwoods were scarce and dear, with a good demand generally.

Orders for the woodworking industries were more plentiful than in the previous year. Box-makers were fairly busy, although for a time handicapped by an abortive strike. Business for the sash and door and interior trim manufacturers also picked up, and in the closing months the factories were exceptionally busy.

Local Trade Good in Spots

For the first five months, local trade was quiet, despite the fact that the building permits showed increases. Then, however, work became much more plentiful, and the lumber trade naturally felt the benefit. The increases in the permits were more pronounced, until at the end of the year the total was \$10,033,901, a gain of \$5,150,228. The public evidently came to the conclusion that the long expected era of lower prices was a very long way off, and consequently many building projects which were postponed were put into force. For a time construction was interrupted by labor strikes, but a settlement was effected by compromise. Further advances in wages are to be given this year. Montreal contracting firms were very successful in securing out of town jobs. The forthcoming season holds out promise of great activity. Architects have a considerable amount of work in hand, and contractors are bidding on some very substantial jobs. There is no suggestion of lower prices, certainly not in the lumber department.

A Splendid Year for Exports

We have to go back to 1906 to find a better record in exports than that of last year. The total was 144,375,182 ft. b.m., as against 58,939,019 in 1918; in 1906 the shipments were 146,765,423 ft. b.m. The season was unusually busy, the exports being shipped as fast as tonnage could be secured. The feature was the enormous purchases in Canada for the British Government by Sir James Ball, the Timber Controller, and Mr. Montague L. Meyer, the Timber Buyer. Both these gentlemen visited this country in April, and conferred with lumbermen and with the exporters. They made preliminary arrangements for the shipment of the lumber, the details being left in the hands of Messrs. Denman and Fisher in Montreal and Mr. MacMillan in Vancouver. These represented the Timber Buyer, who

secured offices and staffs in both cities. Naturally, the greater part of the lumber was for Government account, the Ministry of Shipping being responsible for finding the necessary boats. A considerable amount of lumber shipped from the port during the season was sent by tramps. The lumber,—mostly pine from Montreal,—was purchased through the ordinary exporting houses, and shipped to the order of the Government. The high rates of freight—\$72 to \$80 according to port of destination—were against a profitable business being done in the usual way of export. Another adverse influence was that the Government sold the goods at comparatively low rates, and this factor, combined with the high freight charges, made it almost impossible for ordinary shipments to be made. This did not apply to hardwoods, for which there was a strong demand.

The outlook for the present year is uncertain. The exchange situation is against free shipments by exporters, and a considerable amount of Government lumber, from the Maritime Provinces, has yet to be shipped. Freight rates, too, must come down, if a good business is to be done. On the other hand, the United Kingdom and France will require a very large amount of lumber, the great difficulty heretofore being the congestion of British ports and the impossibility of removing the immense stocks piled at the docks.

Pulpwood a Variable Market

During the first part of the year the demand for pulpwood was very poor. Owing to the dullness in this department during the previous year, the supplies were not large, while the mills had good stocks on hand. The consequence of this condition was an accumulation of ground wood. About June, however, quite a change came about. The mills received large orders, with the result that the ground wood supplies became exhausted, and a demand set in for pulpwood. Prices naturally advanced under this stimulus, and reached very high figures. The exports of pulpwood declined during the year, the demand being more for the manufactured product.

The pulp and paper industries experienced a year of prosperity, and again expanded until they now stand third on the list of Canadian exporting industries. No other single section of our commerce can show such a phenomenal rise. The home demand for pulp and paper was excellent, while other countries were free buyers. The industries are intimately allied with lumbering, for lumber is the basic material, and many of the companies cut lumber for the home and foreign market in addition to supplying their own needs in the way of pulpwood.

8 0

Remarkable Activity in News Print

Although there was not much in the way of building new plants, The International Paper Company of New York are erecting a large sulphite mill at Three Rivers, and there was considerable additions to the machinery of existing mills. The Kipawa Company also put into operation a very large mill at Kipawa, and the Great Lakes Pulp and Paper Company contemplate putting up a sulphite and newsprint plant near Port Arthur, Ontario. Both the mechanical and sulphite markets were dull during the early months of the year, while the newsprint section was very active, the demands coming from all parts of the world, and the supply not keeping pace with requirements. The two first named departments improved during the second half of 1919, the exports of groundwood to Europe materially helping the market. The accumulated stocks of pulp were soon disposed of, and the year closed with a strong demand, and practically no stocks on hand. As in former years the United States were the best customers for newsprint and for pulp.

In connection with the pulp industry, the Woodlands section of the Canadian Pulp and Paper Association was very active, and received the co-operation of the Quebec Government. A particularly valuable report on logging methods was drawn up, while attention was given to the cutting regulations, conferences on the subject, in conjunction with the Quebec Limit Holders Association, having been held with the Quebec Government. A sub-committee was appointed to deal with the matter and to put the proposals into a concrete form. In the words of Mr. R. Kernan, the president of the section during the war, "there are many and varied views as to what cutting regulations will bring about the quickest and best forest reproduction, but the most general opinion seems to be that it will be impossible to adopt regulations suitable for the Province, and that the different sections should be studied and special regulations laid down for each.

Stocks Lower, Prices Good, Bigger Output

What Representative Lumbermen Have to Say on Operations of Past Year and Prospects for Coming One—Features of Production and Demand

It is always interesting to review the past and scan the future. In past periods, when trade was normal, and no problems of reconstruction and realignment had to be faced; when labor was not so insistent and restlessness so rife, fairly accurate predictions could be made with respect to conditions in the lumber arena during each prospective season. It did not then require a prophet or the son of a prophet to foretell, with a reasonable amount of assurance and confidence, what was likely to happen in the way of production, prices, demand, sales, distribution and other problems during the coming months.

Now it is not possible to gauge the future, except in a speculative sense. There does not, however, appear to be any prospect of prices decreasing or of the supply of forest products overtaking the insistent demand for many moons. No doubt as soon as the mills begin operations in May and the new cut comes on the scene, supplies will, in many quarters, be replenished, but, from present indications, there will be a market ready and willing to absorb all the augmented production and at the higher values which are prevailing.

As long as the cost of living keeps up, wages will naturally remain at the present level or ascend. This economic fact being admitted, there can be little hope of the cost of production and maintenance coming down, in the near future. Then again, as long as the supply is short of the demand, there is bound to be an upward trend in values.

In the production of lumber one of the greatest elements that has to be computed is the cost and efficiency of labor. At the beginning of 1919 it was not thought that such an insistent domestic and foreign call would be set in for lumber as came from all quarters and early in the summer the aviation of quotations was witnessed, owing to the causes already outlined and the process has been going on since.

On the whole, the past operating season was a good one, but the log supply in the winter of 1918-19 was a decreased one in all parts of Eastern Canada for various reasons. One was the shortage of men, the outbreak of the flu, which epidemic demoralized numerous camps at the outset, the absence of snow and unfavorable working conditions at other points and the uncertainty respecting the future requirements—for no one foresaw the strength of the market. Contributory to all this was the fact that the lumbermen had gradually been decreasing their output from year to year, due to the uncertainties created by the war, and the general feeling that conservatism and care should mark the management and methods of industrial activities.

How the demand for lumber suddenly developed, the causes which aided the reversal, the foreign requisitions, the revival in building operations, the pronounced scarcity of dwellings, the large orders received by various industries and the general expansion of business—have all been referred to frequently in the "Canada Lumberman." There would be little force or effect in reiterating the stories so well known to all. It is better that some of the leading representatives of the industry should have an opportunity to give expression to their opinions. A general discussion is always interesting and the thoughts of the other fellow are often original, and present a fresh aspect or a new viewpoint.

In connection with this Statistical Number which the "Canada Lumberman" has issued for years, it has always been the aim to present a review and summary of conditions during the past year, and to cast a horoscope over the future.

Bigger Output and Firm Prices

In a cumulative sense all firms look for a good year in 1920 with a larger output than during 1919 and the present if not higher, levels of prices prevailing. They also anticipate a demand that will be active throughout the whole season. How long it will require for production to overtake demand is a matter of conjecture, but it is not thought that this will be accomplished in 1920.

The volume of trade was greater during 1919 than in 1918. From the returns received by the "Canada Lumberman" from various sections of Ontario the opinion is ventured three to one that the trade was greater; 48 report an increased volume, 16 less, and 14 about the same.

In response to the query—how do profits compare with those of 1918, 29 report them greater, 37 the same or about the same, and 6 less. There is an almost unanimous verdict that prices were better in 1919 than in the previous 12 months, and 66 record their verdict

to this effect. Only one says that quotations were less, while 5 assert that the returns were about the same. There is also a marked universality of opinion in regard to stocks being low, 42 reporting that the stocks are considerably less than last year at this particular time; 18 say they are about the same and only 3 declare they have more lumber on hand at this juncture than they had twelve months ago.

The trend of opinion is also in the direction of a larger log output this winter than there was last; 42 proclaim that it will be greater in connection with their operations, 23 that it will be about the same and only 4 or 5 venture the assertion that their cut will not be up to what it was 12 months ago.

Summed up then, so far as the "Canada Lumberman" is able to learn, an analysis of the situation in Northern Ontario and the Georgian Bay proves that trade was much greater during 1919. Profits were, on the whole, about the same, considering the extra cost of operation, logging, driving, towing and sawing. Prices were stronger, particularly during the last few months of 1919, and stocks show a decided decrease compared with those of 1918. The log output, in most centres, will be from 10 per cent. to 50 per cent. over that of last winter, owing to better labor conditions, good weather, increased demand and the promising outlook for the coming year.

To the query: "What is your opinion of the trade outlook for 1920?" no less than 77 lumbermen report that it is good, or excellent, a few characterize it as fair and one as doubtful, but there was not a single pessimistic utterance.

How Various Firms Size up Situation

Here are excerpts from reports from a number of Ontario concerns in the lumber line, which afford some conception of the present and future of the industry.

One company in Northern Ontario say they have no stock left in hardwood and that the demand was greater in 1920 than the year previous. They expect a larger output this year than ever and add "that business should be extra good for 1920, especially in the export line provided space can be obtained, from steamship companies."

"It is a wise man that will make a guess regarding the future," declares a Georgian Bay organization. "Profits were about the same as the previous year, but prices were somewhat higher and stocks less. Lath and shingles were particularly strong and the demand for forest products from the United States was good. The log output for the coming year will be larger than twelve months ago."

Another man in the northern section, who did not operate in 1918 but sawed several million feet in 1919, says that lath are in very strong demand, and that his log output will about treble that of a year ago. Higher prices and better trade outlook is the way he pictures the future.

In the Nipissing district one concern, which sawed sixteen million feet of lumber all soft woods, about four million pieces of lath and nearly seven hundred thousand pickets, report that the volume of trade in 1919 was greater than in 1918, but that profits were about the same.

Prices were higher but stocks were about fifty per cent. under those of twelve months previous. Shingles and lath were very brisk and trade, outside of the local demand, was active. The prospects for 1920 are very promising.

In the Algoma district one company which sawed thirty-two million feet last year and forty-one million feet in 1918, say that the volume of trade was less and profits less than in the preceding twelve months, but that prices covering the whole year were somewhat higher than in the twelve months of 1918. They did not manufacture any lath this year. Their log output this winter will be greater than last and the outlook for 1920 is good.

Sold Coming Cut at Good Figures

"We have sold our cut for 1920 at an increase of over twenty-five per cent. over 1919, and the output on the Sturgeon river will be about double that of a year ago," reported another firm. The volume of trade was greater in 1919 than in 1918 and profits compared favorably with those of the last named year. There was a decidedly keen demand for lath during the closing months of 1919, and the log output will be fifty per cent. more this winter than last, while operating conditions in the bush have been ideal.

A firm in the Muskoka district say: "We look for a brisk demand in 1920 with higher prices," while another lumberman in Grey

county, who specializes in hardwoods, adds that the situation relating to overseas business in forest products is good. They buy about fifty per cent of their output from other dealers, and observe that the log production for this season in their section is going to be doubtful on account of the deep snow in the bush, the very stormy weather which has prevailed and the bad roads.

In the Huntsville district reports are to the effect that lumber of all grades is scarce as compared with a year ago, while the prices of shingles was much advanced and in greater demand. All report the volume of trade in hardwoods in 1919 as greater than in the preceding year, and that the log output this winter will be about the same as last winter. Another firm say that they expect to get five to ten dollars more per M. for spruce than in 1919 and they look for a brisk trade during 1920.

Abnormal Prices for Lath

"Lath became very scarce with prices abnormal, while the American demand for all lines was good in the lumber business," writes a Northern Ontario company. "Stocks are very much lower than a year ago and the output in logging will be about the same this winter as it was last."

"Nearly all our hardwood went to the United States and the present demand is considerably greater than any we have ever experienced," remarks a sawmill man in the Parry Sound district.

There is less stock in sight than a year ago and the peculiar conditions which have characterized the trade with the United States is the high rate of exchange and the runaway market. Better prices are the outlook for 1920. There was less volume of trade with us in 1919 than in 1918, but values were more. There is less stock in sight than a year ago, but hope for a larger output of logs this winter than last."

"Shingles are higher in price and lath have reached famine figures. Out cut of logs will be about the same as last winter. Prices have been higher than a year ago and stocks are lower. About one-third of our output was hardwoods and the volume of trade in 1918 was greater than it was in 1918," is the opinion of a northern man.

"The outlook for 1920 is excellent but we do not think that forest products will rise in proportion to other lines. Our log output will be about the same as last year. Our profits were higher in 1919 than in the year previous and prices went up on the average about twenty per cent," is the information conveyed by another representative lumberman in the Muskoka district.

"All indications point to a large demand for lumber during the coming year and if building permits keep on increasing the difficulty will be to supply sufficient stock to meet the demand. In lath and shingles the demand was extraordinary. Profits were about the same in 1919 as in 1918, and we have only about one-third the stock on hand at our docks that we had at this period a year ago. Comparing prices of 1919 with those of 1918 in softwoods, we would say that they were slightly higher up to July 1st last, and since then they have been climbing steadily. The demand from the United States has been exceptionally good," writes a well-known woods products man in the Parry Sound district.

Say Log Output Will Be Doubled

An Algoma operator is of the opinion that profits were slightly better than a year ago and the volume of trade in 1919 greater than in 1918. He continues: "Our stock in the yard is about the same as last year at this time, but all sold. There was a fine market for lath with strong prices owing to the scarcity. The United States market was also good, but it was difficult at times to get cars. Our log output for the coming year will be double to what it was last season and, in our opinion, trade will be fair during the coming twelve months. We have had good logging weather. Wages are higher than ever with provisions holding the same or slightly higher. We have labor enough at the present time but it is not as efficient as before the war. We will look forward with greater interest to the views of other companies in the industry and see how they coincide with our own. We know that costs are going up all the while in the manufacturing line, but presume that all others are in the same boat as ourselves."

"We averaged about five dollars more per M. for our hardwoods than a year ago, and stocks are away low in this vicinity. Our profits were about the same in 1919 as in 1918," declares another operator in the Georgian Bay district. "There was a lively call for shingles and we expect to get out over two million feet of logs over and above what we did last winter. The prospects for the coming year look very good but conditions as yet are somewhat unsettled," he concludes.

A Northwestern Ontario company says: "We sawed about the same number of feet last year as in 1918 and we found the volume of trade greater by thirty-five per cent. than in the previous twelve months. Prices, on the whole, were about ten per cent. more and 1918. The demand for lath was good but we got out only about thirty stocks are twenty per cent. less than in the corresponding period in per cent. of what we did in 1918. Our log output this year will be

about twenty per cent. less than last winter. The trade outlook for 1920 is good."

"We look for higher prices," says a Northern firm, "and our log output will be about the same this season as last. We have had the same shortage of help to contend with, but the flu was not so prevalent. Our volume of trade was greater than a year ago and prices show some advance. Profits are only about the same when the question of increased and constantly increasing costs of production are taken into consideration."

Lumber Prices Long Way to Go

"Eighty-five per cent. of our output was hardwoods and our log production this winter will be slightly better than a year ago," writes another firm in the Georgian Bay district. "The trade outlook is good but prices, we think, will continue to rise as the cost of manufacturing rises and lumber has a long way to go before it catches up with other products."

A Hastings county organization thus sums up matters: Excellent prospects for 1920—best ever in all lines; log output this winter about the same as last; stocks much lower and prices in 1919 showed an advance of twenty to thirty per cent. over those of 1918. Very brisk demand for shingles and lath and good market from the United States.

From the Bruce Peninsula comes a report that prices have got so high that lumber cannot be bought on grades at all and rarely on any basis except No. 3 common and better, which is a "pure gamble." Sawmill men have been stampeded by rumors of very high prices for hardwoods and think their logs are suitable to produce the stock which maple and other woods are commanding in certain quarters, which afford the very best run.

An Eastern Ontario lumber company, whose output is about twenty-five per cent. of hard woods present an illuminating report, and go into matters fully when they say their output in 1919 was greater than in 1918, but profits were about the same, while prices were considerably higher for the finished product. Stocks are much lower and well sold up. In lumber and lath there was a large demand with great scarcity in both toward the end of the season. "We hope," they add, "to have a larger cut in the bush than last winter, and the trade outlook is good excepting for the general world chaos. Owing to labor and other conditions we have been unable since 1916 to produce more than one-quarter our usual cut of lumber and no shingles at all. In order to hold our trade and to help out on taxes and other increasing expenses we have bought and sold more or less lumber during the past three years, otherwise we could not do business at all under present labor conditions. We are hoping for an improvement in this respect during the coming year. Our total cut of cedar shingle and other materials is still in the water, we may say, since 1915, waiting for a time when we can get expert or suitable shingle makers to work this cut up. We have had extra good demand and sales for all the lumber we can get hold of during the past three months, but profits with us are not large in this business."

Other Views From Various Centres

From the Wiarton district comes another report that the volume of trade in hardwoods was greater than in 1918, but that profits were about the same in 1919 as they were in the year previous. Log output will be about what it was a year ago and stocks are equal to what they were in 1918. Prospects are for a good trade in the lumber arena during the next few months.

"Profits and volume of trade were about the same in 1919 that they were in 1918," remarks a lumber company in the Thessalon district. "Prices were higher and our log output will be about the same as last year. The outlook for the present year is good."

A Frontenac county operator states that his volume of trade was greater than in 1918; that profits during the past year were about the same as those of the year before and prices advanced 15 per cent. The outlook for 1920 is considered good.

"Excellent," is the word used by a Northwestern Ontario firm in gauging the business outlook for the coming year. Lath were very active and there are no stocks in hand, while the lumber on stick is much less than a year ago. Profits were about the same as those of 1918, the volume of trade was greater and prices advanced about 10 per cent.

A Western Ontario concern gives the following tabloid view of the situation: Trade outlook good, larger log output; heavier demand during past season from the U. S.; prices higher, profits a little better; volume of trade greater.

A North Shore lumberman states that stocks are less; that profits in 1919 were not up to those in 1918; the log output this winter will be considerably ahead of last winter and trade prospects for 1920 are regarded as good.

Some Glimpses from the West

In commenting on western conditions in the lumber line during 1920 a representative Pacific Coast firm, in writing the "Canada Lum-

berman," state that the volume of trade in 1920 was greater than the year previous, that prices were higher and stocks much lower. The lath and shingle market were very active, the demand from the United States being heavy for all classes of building materials. In regard to the foreign market the demand was good, but tonnage scarce. The stock of logs on hand all the year round was less than in 1918 and the horizon for 1920 is bright, with labor and supplies still advancing.

Another western firm reports that the volume of trade in 1919 was greater than in 1918, but that, on the whole, profits were less per M. feet. Prices were lower the first half of the year than in the previous half, but during the past six months quotations were very much higher. The demand from across the border was good and the log output in the Crow's Nest Pass Section showed an increase of nearly one hundred per cent. over last winter. The outlook for business during 1920 is spoken of as promising.

Here is the report of another organization which cut three million feet more during last year than in 1918. The volume of trade is summed up as twenty per cent. greater, with profits, on the whole, thirty per cent. less and prices, in the aggregate, when the entire year is taken into consideration, as about ten per cent. more. There was a heavy demand from the United States and about fifty per cent. more demand in overseas business. The log output was about the same as during 1918, but the prospects for 1920 from a trade standpoint are characterized as very strong.

Optimistic Reports from the East

A large Eastern Quebec concern, which sawed about eighteen million feet in 1919 or an increase of a million over the year pre-

vious, report that the volume of trade and the profits during the past year were about the same as those in the previous twelve months, while prices were, on the whole, a shade higher. There was a heavy demand for lath and the log output this winter will be about the same as a year ago. The outlook for 1920 should be a splendid one, in spite of rising costs.

A Nova Scotia operator states that the percentage of hardwoods which he sawed were some fifteen per cent. more than in 1918, but that the volume of trade and profits were about the same in 1919 as they were in 1918. Prices, on the whole, were considerably higher while there was a stiff requisition for lath and shingles. Most all the output was sold in the British market, and there are good prospects now for overseas business, but for the lack of tonnage. The log output is greater this winter than last winter and the future in the lumber industry should be bright, judging by the number of inquiries coming in from all sections.

Another company in Nova Scotia assert that profits on the year's operations, in 1919, were about the same as in 1918, and that prices were higher by about thirty per cent. Business in lath and shingles was dull up to October, but since then has been very active. Stocks are low and for the most part sold out early. The log output of the company will be ten per cent. greater than a year ago and the prospects for 1920 are attractive.

An Eastern Quebec firm make the statement that prices were better and stock less than a year ago. The bulk of their trade is domestic and, while the immediate future in the lumber industry may be in some doubt if the heavy log output anticipated comes out, everything should turn out all right for the lumbermen.

Lumber Cut in New Brunswick will be Large Highest Prices Ever Known in the Province Paid for Logs—All Plants Making Preparations for Unusually Busy Season—Scarcity of Lath

Notwithstanding a severe winter the log cut in New Brunswick this season will be much larger than anticipated last fall. Along the north shore operations have been twenty-five per cent. greater than at first estimated. This is true in other parts of the province, and from all reports coming into St. John from the various camps, the cut should be a record one. The highest prices ever known for logs in the province are being paid, quotations now reaching \$30.

Early in the winter there was very little snow, and this greatly handicapped operators. In addition to this they were held back by a shortage of supplies, nevertheless an immense amount of work has been done. During February fifty-one inches of snow fell, and this should assure operators of splendid driving conditions, although just at present it is retarding hauling. This is due to the fact that, after heavy snow falls, sleet fell and formed hard crusts on the ice, after which more snow would come. The horses found the going very hard and many had their legs badly lacerated by breaking through the crusts.

In various parts of the woods there is at this date—March 4—an average of six feet of snow and, in some parts, drifts are piled up fifteen feet high. This means additional work breaking through, but the operators are thankful for the "beautiful" and are willing to cope with the now trying conditions.

There is an exceptionally strong demand for laths in New Brunswick at the present time and many portable mills are working overtime in order to fill orders. Other mills are being opened and have already started making laths. These small concerns are being badly handicapped, due to the fact that there is little water obtainable. The frost penetrated the ground so deeply during December and the first two weeks in January that all of the wells are frozen up. As a result they have to resort to melting snow and hauling water from a considerable distance.

Getting Ready for Sawing Season

With March here preparations are being made to open the saw mills at St. John and along the St. John river and tributaries. Machinery is being overhauled and repaired and everything possible being done to get away to an early start. Some of the mills have a supply of logs on hand and will be able to resume operations before the opening of navigation, but others must await for the sun, high winds, rain and freshet to break up the ice and afford them a chance to get logs out from up river.

James Holly & Sons are getting ready to tow and survey logs. They have been operating the large boom at South Bay for nearly two score years and, as soon as the ice moves out, they will be ready

to make a dash up river and secure logs for the mills. The St. John Log Driving Company are also preparing for their season's operations and are having their tugs, etc. overhauled and repaired. Altogether it looks as if the season of 1920 will be a banner one for the New Brunswick mill owners and operators.

Steamers Load Up With Lumber

There is an old saying that "it is an ill wind that blows nobody good." This has proven true as regards local lumber shippers. For weeks the railways have been blockaded by the exceedingly heavy snow falls and, as a result, freights have been tied up and embargoes placed on import and export freights of all kinds. While the steamers remained in port anxiously awaiting freight they received orders to load up with lumber and proceed to their destinations. As a result many of the large liners that carry from 25,000 to 50,000 feet overseas have been taking upwards of 500,000 ft. This means a great boom for local dealers and they seem to be the only people who are blessing the doings of the weather man. The more lumber they can get rid of now, the more room they will have for the anticipated record cut in 1920.

Some Big Shipments By Eastern Firms

George McKean & Company, of St. John, shipped 41,684,531 feet of lumber to European markets during 1919. This is one of the most prosperous seasons for this firm in years, with the exception of 1917, when they shipped over 50,000,000 ft. During the present season they are getting away to a record start.

They are confident that the year 1920 will be a banner one in the lumber industry and expect to exceed their remarkably good showing of 1919. The lumber shipped by George McKean & Co. during 1919 was as follows:

	Spruce	Hardwood
January	1,146,573
February
March	1,083,861
April	1,778,456
May	1,616,568
June	2,080,851
July	375,659
August	13,065,262
September	5,150,545
October	4,330,475	457,760
November	2,723,144
December	7,875,377
Total, 41,684,531 sup. ft. from St. John, N.B.	41,226,771	457,760

The lumber shipped by W. Malcolm MacKay, Ltd., of St. John, during 1919, was as follows:

	Spruce	Hardwood
January	2,153,880
February	4,862,440
March	870,757
April	1,807,030	302,700
May	1,556,895
June	303,713
July	6,071,886
August	2,635,293
September	2,657,013
October	3,660,119	120,025
November	2,130,802	48,909
December	242,922	77,088
	28,952,750	547,722

Alexander Watson, of St. John, shipped the following:

	Spruce
April	47,000
July	545,000
August	218,000
December	1,730,000
	2,540,000

Shipments to U. S. Covering Past Two Months

The lumber shipments from St. John to the United States from January 1st, 1920, to March 1st, 1920, are:

	Value
Laths	\$ 2,569.39
Lumber	312,101.87
Pine Boards	12,271.43
Pulp Wood	1,429.15
Shingles	2,666.00
Wood Pulp	239,797.56

Lumber Shipments to U. S. through St. John for Year 1919

		1st Q.	2nd Q.	3rd Q.	4th Q.	Total
Laths	pcs. 31,708½	\$ 7,604.90	\$ 35,472.81	\$ 96,624.34	\$ 125,264.92	\$264,967.97

Greatest Lumber Year Ever on Pacific Coast

No Likelihood of Decrease in Prices for Some Time—Scarcity of Logs May Soon be Overtaken—Canadian Market Will Not be Neglected

The year 1919 was the best year that the lumber industry of British Columbia experienced since lumber was started to be cut in the Coast province. But 1920 bids fair to surpass it in the quantity cut and the amount sold, not to mention the price at which the lumber will be disposed of. It was not until the beginning of 1919 that there were any signs of a fluttering in the lumber dovecots in B. C. Those signs pointed to something approaching a boom and, as a matter of fact there was a boom. The demand for lumber was greater than even the most optimistic lumberman ever dreamt of.

America opened up her markets for the reception of the products of the B. C. sawmills due to the fact that the mills down south could not cope with the demand and certain economic factors, that entered into the production of lumber which were beyond the control of the industry particularly in the states of Washington and Oregon. Canada suffered as a result of this demand and is to-day suffering from a scarcity of lumber at a time when the reconstruction period is upon us. The demand from the United States is still on the increase, though here it might be said that the embargo recently placed on the movement of railway cars from here to southern points may have a substantial effect on the export trade.

The amount of lumber produced in B. C. is, as stated, on the increase. But in 1919, while there was an unprecedented demand there was, strange to say, a falling-off in the amount cut in the local mills. The shipments were greater and the stocks became depleted to an extent that did not look good to the prospective purchaser either in the Dominion or in the United States. The price started its upward move early in the summer of 1919 and, since then it has continued on that course until, to-day lumber is at a figure that no one ever conceived it would reach.

For the past six or eight months, British Columbia's principal market has been the United States, with eastern Canada and the Canadian prairies coming next. The east has probably a shade on the middle west in this connection, though there are indications that the prairies will move much more quickly this year than last year. The consumer there as well as in the east realizes that if he is to secure a supply of lumber he must order quickly, despite the fact of the embargo on cars being in operation. Ways and means will be found by the Americans to get the lumber southward, so that the

Canadian who wants lumber must not place too much importance on this embargo.

During the year the value of grown timber disposed of by the provincial government was around \$700,000 in comparison with \$380,408 in the previous year, and \$483,281 in 1917. The year 1916 was still lower than any of these. At the head of the list were the Vancouver and Island districts with about a quarter of a million dollars. Prince George was around \$150,000 and Prince Rupert was a close third with almost the same as the Prince George district.

What B. C. Turned Out in 1919

No previous year can come up to any of the figures published this year for sales and the quantities involved. There is a notable increase in the upper Fraser River district east of Prince George where over 56,000,000 feet of saw timber, exclusive of a considerable quantity of ties and cordwood was sold as against eleven million in 1918. This remark is also applicable to the district around the upper Thompson river, north of Kamloops, where over 16,000,000 ft. of saw timber and 390,000 ties were sold. These figures are in comparison with 12,000,000 feet and 78,000 ties sold in 1918. The total number of sales in 1919 was 356 as against 133 in 1918, 256 in 1917 and 227 in 1916, while the area cruised for sales had increased from 23,318 acres in 1916 to 61,809 in 1919.

In 1919 over four million feet of piling was sold, a tremendous increase over 1917 when only 378,000 feet of piling was disposed of. There was also a substantial increase in the number of cords of shingle bolts and cordwood. One of the most important phases in the disposal of crown timber stock was the sale by auction of small blocks and fractions adjacent to present operations which would be wasted unless utilized immediately. Small logging units of mature or over-mature timber were also offered for sale with good results while timber on agricultural land was also sold in the open market.

Logging Companies Acquire New Limits

There have been important developments in the lumber industry in British Columbia within the past nine months. New timber limits have been acquired by many of the most prominent logging concerns. This is notable in the case of Messrs. Bloedel, Stewart and Welch, who run one of the largest camps at Myrtle Point, up the coast. They have now acquired a large tract of splendid timber on the east coast of Vancouver Island, comprising from six to eight thousand acres and said to contain some of the finest timber in this province. Here, a large camp is being opened and there is every prospect of this camp rivalling Myrtle Point in point of production.

Other firms have also opened new camps, the reason being the

abnormal demand for lumber. These camps have not yet got into their stride, hence the comparative scarcity of logs and the corresponding shortage in lumber at the present time. It is believed that before many weeks this scarcity will have been overtaken and that the mills have all the logs they can saw. Even though there is this scarcity of logs, it is a noteworthy fact that many mills are working double shifts,—that is twenty out of the twenty-four hours, and if the camps come through with the supply of logs, these shifts will be continued right through the coming summer and fall.

Of all the districts in British Columbia which are coming to the front in the matter of producing lumber, the mountains are entitled to special mention. For some months many of these mills have been closed but they have not opened up and the logging operations that are going on just now are far in excess of anything ever attempted before. Roughly speaking, the camps aim at producing exactly double what they turned out in 1918 and the sawmills in that region are going to do likewise. The majority of the mills have installed more up-to-date machinery to be in a position to meet the demand.

From the Kootenay District

The same applies to the islands on the lower mainland and on Vancouver Island. In 1919 the cut in the mountains was fifty million feet less than in 1918 but, on the other hand there was an increase of 65,000,000 in shipments. This was due to 1918 being a dull time and as a result there was an accumulation of stocks. The Kootenay district came out well in the matter of sawn lumber. For the year it had 240,000,000 to its credit of a value of \$5,448,000, but the shipments were 290,000,000 of a value of \$7,464,000. The amount cut in 1918 in this district was the same as the amount shipped in 1919, but the value of the latter was \$800,000 greater than the former, showing how the prices had increased.

In former years, the Kootenays sent most of their cut to the Canadian prairies and, for the first time in the history of the mills of that locality, the United States became a customer. As compared with 60,000,000 feet sold to the States last year, the prairies and eastern Canada took 45,000,000 feet. One of the greatest developments in the mountain district has been the opening of the Nicola Pine Mills Ltd. at Merritt. The output of this mill will be somewhere in the neighborhood of 200,000 feet daily with a planing mill capable of handling 350,000 feet every day. It is also stated that the mountains will shortly have large pulp and paper mills if the plans which Mr. W. A. Anstie of the Forest Mills of Revelstoke, materialize. Mr. Anstie at the time of writing is in England perfecting these plans and discussing them with his principals.

Cause of the High Prices

The matter of prices is one that will be of particular interest to eastern Canada lumbermen. Opinions on this subject will, not unnaturally, be diverse. These comparatively high prices are due to several causes, and before going further it would be as well to state that there is no likelihood of a decrease for this year. And it doubtful if there will be a reduction for the next two seasons. It is difficult to prophesy but all the signs of the times point in that direction.

At the commencement of 1919, the lumber industry was experiencing a slump. There were orders, it is true and the British order for 70,000,000 feet was looming on the commercial horizon. This order, by the way, has not been completely filled. The conditions were that it must be completed by the end of February. But, at that time, there were from ten to fourteen million feet yet to send overseas and the contract automatically dropped. This leaves the mills a freer hand to go ahead cutting for the home market, but whether this will have any effect on the prices favorable to the purchaser is a moot point.

Some Important Factors in Prices

As to the real causes that led up to the advances made in price. There were several of these. One of them was the higher cost of both skilled and unskilled labor in the camps and the sawmills. It would be hard to state to what extent the wages have been increased. But it may safely be assumed that they have gone up from ten to forty per cent. Then the cost of commodities for the camps has followed suit, with but a slight increase in the cost to the men. Groceries of all kinds have gone up in value, in many instances one hundred per cent., yet the charge to the men in the camps for their meals has not advanced perhaps more than twenty per cent.

The labor situation was a peculiar one in B. C. for a long time. The war played havoc with the ranks of the really experienced lumberjacks and it was necessary to take anything that offered in the shape of labor so that the logs might be turned out for the mills. It might have been thought that less experienced men would not have been paid as high as their predecessors who knew the game from A to Z. But the contrary is the case. They are getting higher wages; they are living under better conditions, they are eating better food

and in every way are better off than were the men who went before them. All these things meant greater cost to the operating companies and the price of logs went up. And so did lumber.

To-day there is really no price list in existence. The premiums and the American exchange have turned everything topsy-turvy. The sawmill men are being offered prices that they never dreamed of a year ago. The loggers have put up their prices which at the beginning of 1918 ran around \$11, \$14 and \$17 to \$17, \$22 and \$27. So far as clear cedar logs are concerned they are away in the clouds, realizing as high as from \$40 to \$45 over the line to-day.

Preference for Canadian Customers

This is the condition, in brief, of the British Columbia lumber industry to-day and it may be its condition a year hence. No one knows just how things will shape, but if the demand is to be taken as a criterion, logs and lumber will be on the upgrade for some time, even though the camps and mills are working full blast to overcome the shortage and even though there is an embargo on cars going over the international boundary. There is one special feature which should be drawn attention to, namely, that shortly before the announcement that there was to be an embargo on cars, several of the most prominent lumber firms in B. C. had intimated that it was their intention to give a preference to the Canadian markets, both on the prairies and in the east.

Instructions were sent to their representatives all over Canada that B. C. lumber was to be sold to Canadians at a price less than that charged to Americans. This, it is believed, is now in force, so that it may be taken for granted that the Canadian market will not be neglected, as has been charged against the B. C. lumber industry in the future. The eastern Canadian trade is developing to an extent never before thought of. Orders from the Atlantic coast have been pouring in and in many cases, representatives of eastern firms have come out to the Pacific coast for the purpose of looking over the ground and placing their orders for quick or slow delivery.

But it is a foregone conclusion that Canada will receive more B. C. lumber than it got in the past year and at a rate that, high though it is in comparison with former years, will be considerably less than the price charged to customers in the United States.

Manitoba Will Cut Fifty Million Feet

Actual timber famine was forecasted in an address before the forestry convention in Winnipeg by George Tunstall, of the Dominion forestry branch, Ottawa. He declared this was inevitable unless cutting operations are revolutionized and reforestation of waste lands undertaken. He said a timber famine would be keenly felt within the next fifty years. Lumber prices, Mr. Tunstall declared, had not reached a point where timber could be "grown" at a profit.

Fire protection for forests was strongly urged by Mr. Tunstall, which caused annually millions of dollars of loss.

Manitoba's lumber cut for this year will be 50,000,000 feet, which is well up to the average, according to information secured from an authoritative source.

Value of Nova Scotia Forest Products

The estimated value of the forest products of Nova Scotia during the year 1919 compiled from the best sources of information available is as follows:—

Lumber	\$ 8,755,000
Cordwood	5,250,000
Staves, fish, apple and potato barrels and boxes	2,000,000
Pulp	360,000
Christmas Trees	50,000
Hop Poles	50,000
Pit Props and Booms	600,000
Telegraph & Telephone Poles	50,000
Railroad Ties	500,000
Poles, Rails, Stakes and Posts and Boards for fences	500,000
Ship Timber & Knees, etc.	1,000,000
Laths	150,000
Wharf Timber & Piling	500,000
Shingles	100,000
Miscellaneous as Weir Stakes, Clothes Pins, Tan Bark, Maple Sugar, etc.	100,000
	<hr/>
	\$19,965,000

Some Features of Eastern Lumber Demand

New Brunswick Operators Had Encouraging Year with Large Export Shipments— Along St. John River Production Will be Increased Several Millions

By "Operator"

Trade in all forest products during the year 1919 in the province of New Brunswick was the most lucrative one to the manufacturers of any year in the history of the business. To sum up the cause of this condition one might say that it was simply a tremendous demand with a very limited supply of material for the market.

At the beginning of 1919 as far as St. John manufacturers are concerned they did not all see alike in as far as they thought wise to make large cuts of logs in the woods during the winter and some were, therefore, over careful and did not get out full supplies for their mills. This left a gap in their sawing season. Wages and supplies were also very high, all through the winter of 1918-1919 and this caused a shortage in the cut of logs all over the Province. Many jobbers felt that they would not take contracts and pay wages and supply bills being asked and so unless an operator had every confidence in the future, he did nothing. This was a common occurrence all over the province and was one of the causes of the undersupply of wood goods later in the season of 1919.

This condition of affairs not only occurred in New Brunswick, but our American neighbors in the state of Maine, which is one of the largest spruce producing states in the east, were more conservative than their New Brunswick friends and only made very limited cuts of logs, claiming all through the winter that there would be no spruce market during 1919, and preaching blue ruin when the war stopped.

Sudden Awakening to the Shortage

One of the factors in starting the upward price of lumber in Boston during the early season of 1919 was thus brought about. The brokers in Boston soon found out that there were practically no spruce supplies in Maine to cover their needs and they began to hustle over into New Brunswick where they bumped into the British Government contract which had practically cleaned up all available supplies. The contracts had been made in the early winter for all the mill cuts possible to be sawn through the season of 1919, and at fair, profitable prices and fairly easy specifications as they were taking large quantities of 2 by 3—as much 2 by 4 as they could get; they were also contracting for large quantities of 3 by 4-5-6, besides the usual quantities of deals 7 by 3, but the government seemed to want as much small sizes of scantlings as possible. All the British brokers in St. John had gone out and contracted with portable mills where they could prevail upon them to saw all the stocks possible at prices about \$28 per M. f.o.b. cars, shipping points, taking the rate of 5 to 7 c. per 100 lbs. export to St. John. This was the means of producing a lot of small stock which is usually unsalable on account of an average length of between 12 and 12½, badly sawn and largely second growth logs cut from farmers lots where the mills are set up. In many cases these mills sawed two inch along with three inch out of the centre of the log, but as the logs were small, in numerous instances 50 pcs. to the thousand, the turnout was nearly all under 6 inches wide, but later on these small stocks served their purpose and saved the day for the house builders at home.

The British Government contract for deals, scantling etc., covering the season of 1919 was made at about \$37 at the mills at tide-water payable in many cases in English currency with exchange at the going rate at the time of shipment. This worked against some operators very seriously during the summer of 1919, but other operators made the Government guarantee the full pound Sterling. In this case they were, of course, for city cut deals and were well manufactured and properly graded. The portable or rotary cuts were sold around \$35 to \$36 free along side ship about \$3 to \$5 per M. less than city cut.

Americans Paid Big Figure for Stocks

During the spring of 1919 the American market began to turn upwards and from a base of \$45 it went suddenly to \$50, with random 2 by 3-2 by 4-2 by 6 selling at about same price. The demand was intense so that American buyers flocked into the province and begged for stocks, paying at about \$37 to \$40 on cars for scantlings; also paying in American funds which, at this time, were, at about 5% to 7% premium, but it was not a question of price, for unless the manufacturer had filled his Government contract he could not supply anything. The American market took a further advance in July and August of \$5 per M and for a time the yardmen stopped buying, but finally made up their minds to pay the price and they

kept picking up stocks where possible, many little mills starting up late in the season where they could get handy lots and haul to the railways. During the month of September prices still further advanced, and have continued steady at prices, which with the rate of exchange at 15% the premium netted \$40 to \$43 on cars for mill cuts for winter and early spring 1920 delivery. This is the highest price at which spruce narrow stocks have ever been sold at St. John and vicinity and many operators made plans to go in very heavily during this winter. The cut over this section of the country will be greater than in 1918-1919, but, on account of the terrible sleet storms of late many operators nearby have come out of the woods unable to do any more cutting and yarding of logs as the woods are in the worst shape known for years. This will have a tendency to shorten the cut to some extent, but to what extent is unknown at present. Further in the interior of New Brunswick and Maine, the storms were not as heavy and the large operators had all their logs properly yarded and are pulling off to streams in good shape. These storms have tied up transportation on the railways and very little stock is now moving to the States.

The Government did not move any stocks through the summer from St. John and this caused a worried feeling among the English brokers in the city, many of whom sold out their new purchases to the American market, but, during the last two months, large quantities of lumber are going overseas, and another month should see all old and new Government contract stock moved from St. John. Steamer space has been more plentiful, caused to some extent by the storms tying up the railways and not getting general cargoes up to the ships. In many cases they have taken deals to fill up where otherwise it would have been general cargo.

Britain Buying up New Cuts of Deals

British buyers are now bidding for new cuts of 1920 deals at prices around \$45 per M for usual specifications and some considerable contracts have been made for short average deals, largely from the north shore of the Province with a limited amount from St. John mills.

The shipments of deals to British market up to December 31st, 1919, from St. John, N. B., were:

Geo. McKean & Co.	41,684,531 feet
W. Malcolm MacKay	29,500,000 feet
Others (estimated)	5,000,000 feet
Total	76,000,000 feet

Summing up the trade in long lumber for 1919 it has been a satisfactory year both to brokers and to manufacturers. Many things came up at different periods to worry the manufacturers, but the tide of prices was always upward with a good demand, and he, who took the chance of having a good cut of logs during the winter of 1918-1919 won the reward of his labors. Certainly one feature showed up all through the year and that was the cost of operating and overhead expenses were far in excess of anything that the operators had figured and unless these prices had have come, he would have had a lean year.

The short lumber situation was more extreme in advance than the long lumber. Laths, which during spring of 1919 were unsalable at \$3, began in August to advance until in December they were selling at \$15 per M on cars at St. John and vicinity. This the strangest situation ever experienced in the lath trade, and many causes effected this condition. For many years operators have been abandoning making laths preferring to make side boards on resaws out of the slab. Other mills were selling their slabs to the pulp mills for more money while other mills did not make them at all as the price of \$3 at which they have been selling did not pay the bills. This combination caused a very low production of laths, and as the steel industry was tied up no steel laths have been made to supply the demand. When a demand came there were practically no lath to supply it hence trouble at once and the end does not seem yet.

The Steady Advance in Shingle Prices

Shingles began selling, Extras \$6.50, Clears \$5.75, 2nd Clears \$5.50, Ex. No. 1 \$3.25 and there has also been a very heavy demand for shingles all through the season with only a small production. As very few mills have any cedar limits from which to cut logs, this

condition will not change by the end of 1919. Shingles had advanced to Extras \$8.50, Clears \$7.25, 2nd Clears \$6.50, Ex. No. 1 \$4.50.

The box trade has also been good through 1919—better than ever and prices have kept pace, with long lumber and laths, stocks of all grades and kinds of long lumber, lath and shingles at St. John are the lowest in years and if the car situation should clear up at once, a month would see bare mill yards in St. John. What little stock is left is sold for delivery as fast as possible.

Regarding the future, many conditions may enter into the trade to upset one's calculation but, if there is a lively requisition at home and abroad and present prices are established and not forced skyward, to spoil the demand, we certainly shall have all the business we can take care of, for if we look to the west the demand is good. Prices are higher than ours and with the long rail haul they cannot undersell and will not as they are well taken care of for months to come. The south is working under the same conditions and all old dry stocks of Pine are cleared up.

We are not producing near as much lumber as in years gone by as the log is very much smaller and there are fewer mills in the

aggregate. England, France, South America and South Africa are crying out for stocks. What can stop trade, unless wild speculation enters in to spoil it. It is now a matter of being careful to hold what has been gained and produce in as large quantities as the markets will take care of. Avoid careless manufacturing of the log after it is cut. Avoid careless logging and leaving any material in the forest which it will pay to transport, and stick to careful business methods through the year to come, for it will take a steady hand to keep our business in its present condition.

Prices will probably remain as firm as at present, for all other quarters of the globe are having high costs of operating which will, no doubt, continue as long as living is at its present pitch. Laths will no doubt come down in price to some extent but not for several months and then, no doubt, the price will leave the operation around \$10 per M this mill. The cut of logs on the St. John river last year was in the vicinity of 35 million feet for St. John. This year will probably be about 5 or 6 millions greater, but there will not be any more mills operating at St. John than a year ago viz., seven mills with one or two smaller portables. The same number of smaller mills will be in operation but no more.

Ideal Winter Weather for Log Production

Crown Timber Agents of Ontario Present Favorable Reports on Activities in Bush—Output in Many Districts will be Far Greater than Last Season

The cut of timber in various parts of Ontario will be considerably larger than last season taken in the aggregate. Owing to certain unfavorable local conditions there may be a falling off at some points but, on the whole, the prospects are bright for augmented production, especially in the northern and northwestern districts.

A leading lumberman who recently visited the majority of camps says that so far as he can judge, there will be an increased cut of white pine of about thirty-five per cent. over that of a year ago, twenty per cent. in hemlock, with spruce and Norway pine running about the same, a little more in some areas and greater in others owing to labor conditions, the weather, roads, etc.

It is interesting to obtain first hand information from the Crown Timber Agents of Ontario who are closely in touch with conditions and their views will shed considerable light on the outlook, present and prospective.

W. M. Jones, Crown Timber Agent of Fort Frances, says: During the past month logging operations in this district have been favorable so far as roads, hauling, etc., are concerned. Although we have had heavy falls of snow it has been a most favorable winter for logging as all the camps got an early start owing to the early winter conditions. I would estimate that, in this district, there will be about 35 million feet of pine timber taken out as well as probably 400 thousand ties and also several thousand poles and posts.

A. M. Huckson, Crown Timber Agent of Sault Ste. Marie, sends the following:—We have had a very steady cold winter and the depth of snow was deeper than usual, but it was very loose and an ideal winter for logging operations. Most of the haul will be through by the middle of the month; labor conditions are fair, and everything is in fairly good condition. The output in this district will be larger than last season. For 1920 operations everything indicates that we shall have an increase in the production. I shall be pleased to send the figures of the output of all classes of timber taken out in this district at a later date when I receive them in.

George A. Bremner, Crown Timber Agent of Cochrane, writes:—The weather for the past few weeks has been ideal for the lumbermen and pulp companies. The output will depend on the spring. If our snow lasts until April there will be a fairly good output. I would judge that there will be 200,000 cords of pulpwood cut on Crown lands this season—that is cubic cords of 115 ft., and about four million ft., B.M. of lumber and 75,000 railway ties. About 50,000 cords of pulp will be cut on private lands along with a fair production of lumber in the small mills. December and January was extremely cold weather which made hauling difficult where ice roads was not used.

J. T. McDougall, Crown Timber Agent of North Bay, reports:—The quantity of timber being cut in this district will be about the same as last season unless we have a long and cold spring and the quantity may increase about ten per cent. The season has been a particularly good one for operating and the work is well advanced; there having been very little sickness in the camps. I expect the cost of operating this season will be high owing to high cost of

supplies. It is somewhat early to say as to how the driving will go. Although there is considerable snow we have had no soft weather and it will disappear very fast. The drives will then have to depend on spring rains to help them out. Quite a few firms have their logs all hauled and others are well in hand.

Best Operating Season Ever

Speaking of the progress of logging operations in the Webbwood district, S. J. Hawkins, Crown Timber Agent, declares:—During my forty-two years in this country, I have never seen any better season for hauling saw logs than this. For the last 85 days the weather has been steady, comparatively clear and cold, without a drop of rain. The ice is good everywhere and just enough snow. I believe there is about 65 per cent. of the entire cut on the banks and in the water, and the next few days will see the biggest housing of the season. The sun is getting stronger, the sleighs run easier, and from now on mostly every load to the dump is a peaker. The labor situation is somewhat improved. The men are steadying down, and not so much jumping. The output here will be about 40 per cent. greater than last year. Our operations in this division are principally saw logs. We may get 50,000 railroad ties, a little pulp wood that the farmers take out, and a few thousand telegraph poles. It is a little too early yet to make any comments on the driving possibilities, but one thing is in our favor. The swamps filled up with water in the fall and they are frozen to the bottom to-day. This alone will be a gradual water supply during April and part of May. Hay, flour, sugar and butter have all gone higher, but, nevertheless, the lumbermen are putting in supplies, in many places, for next season.

J. A. Oliver, Crown Timber Agent of Port Arthur, asserts:—Conditions are very much the same as when I wrote you last. The winter, while during January very low in the morning in temperature, has been splendid for logging and providing the present state of affairs continues until the middle of next month, no operator can have any kick coming on that point. During the winter, and particularly since the first of January, there has been a lot of trouble in many of the camps with labor and especially with men being members of O.B.U. In fact, agitators have at times taken almost every man out of the camps leaving them disorganized for a couple of weeks. On the other hand, many of these laborers are just moving from camp to camp. As a result with these labor conditions, the output will not be as large as what was expected. The logs in this agency will in all probability be about the same as last year. The ties I do not think will be quite as heavy and the pulpwood on Crown lands will be slightly less than last year while the pulpwood cut on private lands will be slightly more. Very few poles are being taken out in this district and no piling has been taken out so far. I might add that, during the past two years, there has been quite a lot of sickness among the men in the camps from influenza. The attack, however, was mild and no deaths have occurred, but undoubtedly the output has been affected by the prevailing illness.

P. J. Whelan, Crown Timber Agent of Arnprior, writes:—As far

as I have any knowledge at present the logging conditions are fairly good, with not quite enough snow in some sections, especially where the country is rough. Moreover, the water tanks making ice roads overcame this to a great extent, and if the weather keeps cold and frosty, there will not be much stuff cut that will not be hauled out. Regarding an estimate of the output in this agency, it will be considerable of an increase over that of last season, and counting what will come off limits, or Crown lands under license, timber permits, and stuff from settlers' lots, (this latter being quite an amount) it will figure up altogether around 100,000,000 ft. M.M., 120,000 cords of pulpwood, and 500,000 railway ties. There will also be considerable of a quantity of telephone poles, fence posts, tan bark, etc. Hauling is pretty well advanced in most places, and the ice is good. Cutting is about finished in a great many places, although in a few camps it is still going on, as on account of the snow being not too deep, and very loose, it affords an opportunity to cut and skid where the timber is not too scattered.

Arthur Stevenson, Crown Timber Agent, Peterboro, remarks:—The total cut on licensed land in this district is so small that an increase or decrease of 10 per cent. or 20 per cent. is a negligible amount unless the same factors were applicable to more productive sections. However, the winter has been most favorable and as far as I can ascertain each lumberman will cut till the last minute to take advantage of the favorable prices. The result will be an excess of say 15 per cent. over estimates. Until we go through the country getting returns in the spring we will know nothing of quantities of ties and poles coming out as these all come off private lots in this district.

Forty Percent. Increase in Algoma

H. McDonald, of Thessalon, who is the Crown Timber Agent in that portion of the province, observes:—This has been an ideal winter for operations in the woods with about two and one-half feet of snow and cold weather and every opportunity for making ice roads. The log hauling is well advanced. Some camps will be wound up soon. Should the weather continue as at present there will be no logs in the woods after the 15th of this month. There will be an increase in the output in this district of 40 per cent. as compared with last year. Wages and camp supplies are very high which makes the cost of production more than last year, but the ideal winter, which we have had for hauling, has been a boon to the lumbermen in that respect. There is not a great deal of pulpwood or ties got out this year. The order of the day among settlers and small operators is boxwood. There is a large box factory under construction at Thessalon, which will consume all the small timber that was not of much value heretofore. There is also a box factory at Blind River, manufacturing boxes and lath and carrying on quite extensive woods operations.

W. P. Christie, Crown Timber Agent of Parry Sound, says:—The weather has been very favorable this season for lumbering particularly during the last month; in fact, it has been an ideal winter for operations. Loggers are about through with hauling and this month will see the finish. Some lumber firms are expecting to do some hot logging if the "flu" does not affect them. There is quite a lot of sickness in some camps and the men are uneasy about staying for the hot logging. The output for this season in pine and hemlock will be,—pine from 45,000,000 to 50,000,000 ft.; hemlock 8,000,000 to 10,000,000 ft. and hardwoods from 4,000,000 to 5,000,000 ft. The figures may vary somewhat as it will depend to a certain extent on what is put out in the spring cut. There will be quite an increase in the production of ties this season. Here a new company has an option on part of Parry Sound property and intends putting in machinery to manufacturing and dressing on an extensive scale.

Why C. P. R. Cars Do Not Cross the Border

In regard to the complaints of the lumber manufacturers of British Columbia that shipments of all kinds of forest products are being held up owing to the recent action of the Canadian Pacific Railway in decreeing that no more of their cars can be used for carrying lumber across the border, F. W. Peters, of Vancouver, general superintendent of the C. P. R., in a recent interview, said: "There are now 19,000 box cars in the United States which should now be in the service of Canadian shippers and if those cars had been returned, as they should have been, the complaints of the Lumber Manufacturers' Association of its inability to ship lumber across the border would not have occurred.

"These cars were sent to the United States loaded and would be returned to Canada either empty or with merchandise in some form or another, but owing to the decreasing amount of goods now being imported into Canada from across the border the receipts of full cars from the United States had dwindled down to a negligible quantity.

"In the ordinary course of business of a railway, even if there

was not enough merchandise to load the cars they would have been returned empty to the place from which they had been dispatched," continued Mr. Peters, "and I can give no reason why this has not been done—except that the railways in the United States were owned, up to March 1st, by the Government. The falling off in the shipment of loaded cars into Canada may account for the failure to go to the expense of returning empty cars."

Mr. Peters said that the shipment to the United States of merchandise of all kinds by C. P. R. cars had now been suspended, and that any freight which left the country was conveyed in the empty cars belonging to the United States, which would have to be sent back in any case—empty or full.

"During the past year the Canadian Pacific Railway Company has been building cars and saying nothing about it," continued Mr. Peters. "Three thousand, 60-ton capacity box cars are now being built, and provided we can get the necessary material, these cars will be ready within a very short time. In addition to these, the company is also building 500 new refrigerator cars, as well as 500 cars for carrying automobiles. I expect that all these cars will be ready this season, if we can get the material, an order having been already placed for 2,500 cars with the Canada Car Company."

Mr. Peters said that the 3,000 cars would be built with hopper bottoms so that they would be capable of carrying grain as well as general merchandise. The effect of the action taken by the railways of Canada in refusing to accept any but foreign cars for United States destination is expected to have a serious effect on the exchange.

The foreign cars coming in are few and the shippers on the coast are the only ones throughout Canada who can get their commodities by water to points across the International boundary line.

India Wants Canadian Lumber Literature

"There are now special opportunities for developing the forest resources of India. Both the Government of India and Provincial Governments have already taken measures to inaugurate new commercial undertakings that have already been or are rapidly being established. Delays are inevitable in communicating with industries and a special staff is being organized to deal with the manufacturers of plant and equipment and it is proposed to open a library of catalogue and price lists in the Economic Branch of the Forest Research Institute, Dehra Dun, India. The Forest Economist will be pleased to receive and circulate to enquirers catalogues etc. dealing with every branch of equipment used in forest industries. It is hoped that firms will help in establishing and maintaining this library by contributions in duplicate of catalogues, pamphlets etc. as they issue."

Economic Value of Britain's Forest Areas

Addressing the members of the Edinburgh Architectural Association at a meeting, presided over by Mr. J. R. M'Kay, in the Association Rooms, 117, George Street, Dr. Borthwick discussed Britain's position as a timber-producing country. Wood, the lecturer thought, was probably more extensively used for the manufacture of a greater variety of articles than any building material. It differed from stone and iron in that it was an organic and not a homogeneous substance. The properties of wood varied with its species, and marked differences occurred according to the conditions in which it grew. Soil, climate, and silviculture had each a marked effect upon the chemical and physical properties of wood. After dealing with the weight, strength, durability, evenness of grain, resonance, fissibility, absorptive capacity for various preservative antiseptics of different kinds of wood, Dr. Borthwick went on to deal with the requirements for timber growth, and showed how the nature of the year rings and quality of the grain depended not only on the soil and climate, but also on the amount of skill and attention bestowed upon the growing crop by the forester. The forest areas of this country possessed distinct advantages, and, given proper selection and treatment, these areas had an economic value which entitled Britain to be recognized as one of the foremost timber-producing countries of Europe, if not in quantity, at least in quality.

Construction of Demountable Ship

"I expect that within a few days the actual construction of a demountable ship will be commenced in Seattle" said John Arbuthnot, when questioned concerning his lumber transporting plan which has been discussed both in British Columbia and in England. The first ship, according to Mr. Arbuthnot, will go to England, propelled by sails and oil engines.

The demountable craft is in reality a cargo of lumber put together in the form of a ship which can be taken to pieces on reaching its destination.

Growing Lumber Production of Nova Scotia

Total Cut Last Year was About Three Hundred Million Feet—One Half Area of Province More Adapted to Timber Than Any Other Crop—Bright Outlook

By Hon. O. T. Daniels, Attorney-General for Nova Scotia

Hon. O. T. Daniels, Halifax

Nova Scotia has, for a generation, been known as a large producer of coal and fish and fruit. It is only recently, however, that the Province has come to the fore-front as a producer of lumber also. This is not the result of an increased lumber production, but rather a recognition of the actual value to the Province of the lumber industry in its different branches. Formerly a rough guess of the value of the crude lumber cut was made and this estimate published as the sum total of what the industry represented to Nova Scotia. The unfairness of this method will be apprehended instantly by applying a like method of calculating values to the agricultural industry.

If, in ascertaining the value of the agricultural production for

the year, the value of the field crops alone were considered the total would be only a fraction of present estimates. The agricultural authorities, however, rightfully add to the value of the field crops other values representing dairy products, poultry products, wool and live stock sold. As a matter of fact, however, all live stock and live stock products are only the crude field crops in manufactured form.

It may not be generally known that fully one-half of the area of Nova Scotia is more adapted to timber than any other crop. 7,750,000 acres are now under forest owned or leased by lumber or pulp companies and held by farmers. The Province also possesses over two million acres of young forest.

Over half of the total production comes from the western counties of Annapolis, Digby, Yarmouth, Queens, Shelburne and Lunenburg. Indeed the forest has been, next to the fisheries, the main source of living on the south-western coast of Nova Scotia since the early settlement.

The principal trees are spruce, fir, hemlock, pine, birch, oak and maple. The spruce is by far the most valued wood, hemlock coming next in importance. Nova Scotia spruce is largely used for building purposes, making excellent floor and joisting timber and also furnishes spars for sailing vessels, as it is both light and strong. The spruce is also the favorite wood of pulp makers. The Nova Scotia spruce, after twenty-five years of growth, can be used for deals. The hemlock is found mixed with other woods. Strong and durable when not exposed to the weather, it is used for much rough work, such as sheathing roof boards for shingling or—holding nails better than almost any other wood—joists studding and stable flooring.

Of the hardwoods, birch is the most valuable. The counties of Pictou, Antigonish, Guysboro and the island of Cape Breton possess large areas of hardwood still untouched. There are many favorable sites in these districts for furniture factories catering to the export trade.

Good Market for Hemlock and Spruce

The principal wood shipped from Nova Scotia to the United States is hemlock, although there is also considerable spruce and pine shipped. Most of the hemlock is shipped to New York and vicinity. Nova Scotia hemlock has to compete there with American lumber, which comes chiefly from Pennsylvania, New Hampshire and New York States. The spruce is chiefly shipped to the British market. At the present time there is no difficulty in securing a market for any and all Nova Scotia lumber. The great obstacle is scarcity of tonnage. Freight rates are extremely high and shippers are confronted with an unusual situation. Despite the rates, however, which range from 250 shillings per standard, substantial profits are being made.

The winter of 1919 was unfavorable for cutting and hauling. Nevertheless production was stimulated by the large Government orders that were placed early in the season. The total lumber cut

for the year was about three hundred million feet. Of this amount one hundred million feet was cut to fill Government orders. A large portion of this Government supply was held over until this present winter. Since the first of the year the congestion has been broken and most of the Government owned lumber shipped across the Atlantic.

The cost of production during 1919 was higher than during any previous year and present indications point to even higher cost for 1920. The labor situation, however, has improved materially, and a good supply of woodsmen is now available. It is expected that the production during 1920 will be fully up to 1919. During the dull lumber years of the war the industry was stimulated to a considerable extent by the recrudescence of the shipbuilding industry. This reached its acme in 1918. During 1919 fewer ships were built, but the number constructed was of material stimulus to the lumber trade. If these wooden ships could be constructed at moderate cost the outlook for wooden shipbuilding would be bright. Unfortunately, however, all material used in the construction of vessels is more expensive than ever and much of it difficult to get. Moreover labor is higher and these adverse factors are accompanied by a declining tendency in ocean freights.

Nova Scotia is fortunate in the fact that owing to the climate and soil of this Province our forest reproduces itself naturally without trouble or expense. Seedlings start from seed sown by the trees themselves. A field that has been abandoned is soon covered with bushes started naturally from seed blown by the wind, or dropped by birds or animals. Fire is the dread enemy to be guarded against. There are few timber tracts in the Province that have not suffered more or less severely from fire injury. In too many cases this has been the result of carelessness. It is very apparent from statistics compiled by the Department of Crown Lands that the two great sources of fire last year were fires set by locomotives and by sportsmen. It is believed that many of the fires that are described as of unknown origin have been caused by fishing parties. Is it too much to ask that those who go to the woods for the purpose of hunting or fishing exercise care in the setting of fires and extinguish such fires before leaving the camping ground?

Regarding railway fires, recent railway legislation at Ottawa will place all railways in Nova Scotia that are under Federal charter under the direction of the Railway Board at Ottawa. Our statistics disclose that our most serious railway fires have been caused by the Canadian National Railways. It is hoped that hereafter this important matter will be under proper control so that a great annual waste may be saved.

Development of Water Powers of Province

Fuller development of the water powers of the Province will mean a corresponding development in the lumber industry. Water power will be utilized not only in lumbering operations but also in the manufacture of wood products. For a great many years the saw mills of Nova Scotia were operated by water power, and at the present time the pulp industry of this Province, which is of considerable magnitude, and is now occupying a great deal of attention with a view to its further extension, is based entirely on water power.

Seven pulp companies operated at different points throughout the Province during the past year. These companies utilized or exported 84,000 cords of pulpwood. The price of the wood averaged \$7 per cord, f.o.b. cars. During the present year the price ranges from \$9 to \$10 per cord. The pulp produced is valued at \$360,000, in addition to the pulpwood exported.

With the formation of the Nova Scotia Power Commission and their initial development at the head of St. Margaret's Bay, near Halifax, it seems as though the first steps have been taken in securing to Nova Scotia an adequate supply of electrical energy. In the future, with our water powers harnessed and transmission lines radiating throughout the Province, a new era will open for the lumbering industry.

Portable mills may then be set down at the most advantageous points and moved about as the occasion demands at the minimum expense. A supply of power at a low price will also be available for the numerous pulp mills, saw-mills and furniture factories, a great many of which, under present conditions, suffer from serious diminution of their power supply throughout the summer months of low

water. There will be the further advantage of lower fire risk with the electric motive power and, it is thought, a considerable speeding up and increased output.

With the building of storage dams and head dams in connection with the proposed water power developments, it is thought that stream driving will be greatly facilitated. Long stretches of rapid water and numerous runs and shallows which today cause the stream driver so much trouble will be under flowage and a properly regulated supply of water will render streams available for driving at any time of the year, whereas heretofore many of them without specially constructed dams have been serviceable at freshet times only. That has been the general experience on streams upon which large power developments have taken place. With properly constructed log sluices at the various dams, no delays will be caused at these points.

Perhaps none of the industries of Nova Scotia is of more real and substantial benefit to the great majority of the people than the lumber trade. It means the distribution yearly of nearly twenty millions of dollars and this money is earned when many other industries are slack or at a standstill. Our forests are a great national asset of increasing economic value. Easy accessibility and underground shipping facilities render the position of Nova Scotia as a lumber exporting country unique. It remains for Nova Scotia timber owners to develop and cultivate their holdings. On account of the excellent natural reproduction, which generally follows lumbering operations and fires in the Province the necessity for artificial planting has not made itself strongly felt in Nova Scotia. Nevertheless the time has now come when timber areas require the same condition and care as any other crop.

Future of Quebec in the Lumber Industry

Province Has 45,000,000 Acres of Timber Lands Under License—Complete Forest Survey Urgent—Development of Great Natural Resources

By Hon. Honore Mercier, Minister of Lands and Forests for Quebec

Hon. Honore Mercier, Quebec, P.Q.

The province of Quebec has before it to-day a vast colonization programme. We must have more good land for settlement, for the greater production of food, and for attracting the surplus population of the towns, and the younger men who are leaving the older farms to carve out new homes for themselves. With a determination to understand one another's needs there is no reason why the lumbermen and the settlers should not get on perfectly well together. The lumbermen need the settlers for work in the shanties, and, when the settlers are not too far distant from lumbering operations, the lumbermen have less distance to haul their forage. The lumbermen of the St. Maurice district have much to thank the settlers of Abitibi for. Were it not for the rapid increase

of that settlement, the lumbermen would not have the regular train service which is now so great a boon to them. With mutual forbearance and consideration, I feel that there will not be much difficulty in deciding where the forests are to remain and, where land may be taken by settlers.

When the law was passed requiring settlers to take permits before burning to clear their lands, we had fewer protests from them than we would have had if the proposal had been to raise stumpage dues. The settlers thought the matter out, consulted their priests and the officers of the Lands & Forests Department, and complied with the law, and now we have a system of fire protection which is the envy of all the other provinces.

The province has now to look to the development of its unsettled lands. This development becomes in the first place a question of connections. The Abitibi district affords a good illustration of this fact. It is, thanks to the railway and to the richness of the soil, that colonization in that district has proved the success which it has. In other portions of the province industries must be added in order to facilitate settlement.

There is no doubt that in many of our north lands, timber and pulp and paper mills will form the nucleus of new parishes. For the purpose of operating these new industries, we have a considerable amount of horse power, six millions of which are already developed. The establishment of the new industries will not only increase the opening up of our natural resources in those sections of the country, but they will build new towns and establish new railways which will connect these new regions with old Quebec.

Lumber has always meant much to the province of Quebec and the forests still remain one of our chief assets. Our resources are great. We have 45,000,000 acres of timber lands under license and approximately 75,000,000 of virgin timber lands.

We do not, however, know the value of these forests, and we should like, in order to build up a definite forest policy, to make a complete survey of all forest lands. For this we shall need the as-

sistance of limit holders so far as the survey of their limits is concerned; and the task of the Government in surveying the remaining territory will still be a vast one.

In a word, the time has come for us to require the preparation of working plans in lumbering operations. It is in the public interest and in the interest of lumbermen as well to plan your operations ahead, so as to leave the forest—after cutting it—in the best possible condition for future growth. The objection which may have one time existed to such a policy has disappeared. With our well organized fire protection system, due largely to the co-operation of the lumbermen the danger of fire has been greatly reduced and, therefore, lumbermen cannot afford to cut the forest too close in order that it may be in a position to be cut over again in a reasonable time. For the same reason private owners of waste lands may safely commence their reforestation.

The Government of Quebec intends to deal with lumber limits in a generous manner, but also expects the limit holders to do their share. The lumber industry, in the past, has done wonderful things to increase the efficiency of mill operations, and to reduce waste in the utilization of wood products. There is still more to be done in this respect, notably in the use of hardwoods which have been practically untouched by present operations. I believe that we may rely upon the lumbermen to devise proper and adequate methods of transporting these logs from the forest to the mill.

The future of the lumber industry, as well as that of pulp, is certainly brilliant. For many years to come there will be a large demand in Europe for material with which to rebuild the regions devastated by war, and also to replace the supply of timber formerly furnished by the forests which have been destroyed during the last five years in every section of Europe.

The gradual exhaustion of the wood supply in the United States will also increase our opportunities of becoming furnishers of paper products to our neighbors as well as to Europe. Our province is in every way well situated to take advantage of these opportunities. We have the necessary natural elements in our waterfalls and in our forests, and, in addition, we have one of the greatest factors of prosperity in a population which is recognized as one of the best in the world, as well as having a class of lumbermen who are appreciated wherever known for their progressiveness and generosity.

The Canadian Robert Dollar Co. has purchased the extensive timber holdings of J. A. Smith at Coquitlam, B. C., and the price paid was \$500,000 cash. The limit consists of 9000 acres of timber lands, six miles of railway and camps operating on three sides, with a daily output of 150,000 feet. The property has a reputation of being one of the most up-to-date and finest logging operations in the province.

The purchase was made by Mr. Melville Dollar on behalf of his company. Mr. D. McIntosh is taking over the management of the logging operations. The logs will be sawn by the Dollar mill at Dollarton on the north arm of the inlet.

Mr. Smith, the former owner of the limit, is a resident of Vancouver and one of the best-known loggers of British Columbia. The timber consists of fir and cedar of good quality. Booming grounds for the limits have been maintained at Port Moody. The limits are stretched along the Coquitlam River and the logs are easily got out.

Some Reconstruction Problems in Ontario

Necessity of True Forest Inventory of Province—Protection from Fire and Waste and Greater Utilization of What We Now Possess is Urgent

By W. F. V. Atkinson, Consulting Forest Engineer, Sault Ste. Marie, Ont.

A real interest in our natural resources is now becoming more and more manifested, hardly a day passes without some suggestion appearing in the press. This is a healthy sign of awakening industry; it is reconstruction, the return of human energy, lately employed in a war of self defence, to the necessities of self support and the restoration of the Canadian dollar to its par value.

At conventions, clubs and elsewhere one hears of plans and recommendations to subsidize our low grade iron ore, to develop our water powers, to colonize our lands and make good roads, and last, but by no means least, to produce more timber from our forests, and to protect them from waste. Our forests and our lumbermen have saved our financial "bacon" before. They can do it once again, but after what will the situation be? They need our attention, our intelligent help, and consideration.

There is a real desire that all these things be taken up seriously, and progressive steps must begin immediately. As it is the habit of this country and of this province to get what it has set its mind upon, these things will be done. One had only to note the feeling at the North Bay Convention, to which I went as your delegate in January last, to be assured of this.

Since the year began it has been intimated the Dominion Parliament and several of the Provincial Legislatures may take action tending to conservation and to the development of wood-using industries in the country, as against the exporting of logs and pulpwood, even from property held in fee simple.

Obtaining the Required Timber Crops

The paper and lumber companies, owners of private and crown stumpage showed more interest than ever in forest problems at the recent meetings of the various associations at Montreal and Quebec. The appreciation of the general public, and the attention paid to forest matters by the Engineering Institute of Canada also indicated the general desire for knowledge and improvement. Those who have watched for years the trend of developments noted with great interest the "motif" or note, variously expressed but occurring in all the speeches and discussions, seeking what could be done to increase or supplement the future supply. "What do you know about these things?" rather than "What do you think?" Plainly a reaching out for forest working plans, and a forest inventory.

What is a working plan? It is briefly a well defined scheme—Silvicultural method of management—by which from sufficient areas—Units of regulation—the required timber crops, can be obtained to meet and maintain in perpetuity a stated need—Object of management—at a definite cost, plus or minus the unknown relative cost of logging at maturity, this is certain to be less than at present. The cuttings being annual, the—Rotation—would probably be determined on the "greatest income" basis. The—Risk—is probably, all things considered, less in this business than in most others, and may be called the unforeseen. ("Act of God" or the "King's Enemies.") The working plan is true Forestry, the Forester's art. It will come; it must come, but not yet, the public must really feel the effect of high prices first.

Various needs were expressed at the recent meetings, and various methods have had partial trial, others will continue to be tried, all the methods spoken of were good, none were new, except as they are locally applicable. This is the great point from which pessimism frequently begins. It will some day be understood that the Science of Forestry cannot be picked up by any amount of practical experience alone, any more than can the Science of Medicine, that in both, years of study as well as experience are needed, in order to give valuable service.

Should Cease Bluffing Ourselves

The need for forest products must be first greater than it is today in order to demand rightly directed action. A demand is caused by a shortage either present, or unmistakably clear in a definite future, some persons already would appear to admit such a possibility. A greater demand means greater price and this is the force, whereby the required end will come about, those who see the shortage first will try to protect their industry. Some others must be too late, their failure will assist those plants which remain.

I have said that all of the plans I heard discussed were good, but like the Scot once said all "Scotch whusky" is good but some is better

than others, none of the plans were practical because they ended nowhere. What should be done now? For the present two things only, and these can be briefly told. Do not let us bluff ourselves any longer with imaginary qualities of standing timber. Surely we have enough courage and sense to look the truth in the face and find a remedy. Various kinds of woods have different uses. How much of each kind have we got, and in view of its location what will it cost to bring each kind from where it is growing, to the sawmill, paper mill, factory, chemical plant, or other place of disposal, that is, how much per cent. greater will this cost be per quantity and per locality, than the average present costs at the mills to-day? Everybody knows that some of it can never be marketed at all and this must be shown in an honest statement.

This means of the two things required, First a true forest inventory. To get this an air photo survey can be perfected which, with the subsequent details worked out on the ground, will be the cheapest and best method to cover the very large area involved. Second, protect from fire and from waste, by a greater utilization, what we now think we have. For this purpose the Province must have a sufficient permanent staff of men always in the field, some as fire wardens, and others inspecting and scaling. This staff free from interference will show how the present system can be improved. The operators must be encouraged not harassed and where existing contracts have been made without regard to full use of all timber, they are capable of fair adjustment and probably betterment, so that no change should create an injustice or should drive leaders of industry from their necessary and useful work.

There is no secret or mystery in logging but there is much experience and hard work needed, there have been many risks. These demand a fair and generous profit.

The two points just mentioned are urgent, all other details for the present are beside the question. After a permanent technical staff of Government Forest officers is established, it should be the policy of the Crown to encourage any industry requiring a continual wood supply, to furnish a tentative working plan, and to grant them by long lease or conditional deed, such forest lands, as having been cut over can, by proper silvicultural methods, tree-planting, etc., be re-established as units of regulation for the proposed working plan. A farmer can get free land if he makes a farm out of it. Waste Crown land should be free to those who have the courage to contract with the Crown to make a cultivated forest.

Obtaining True Forest Efficiency

As stated it is neither useful nor possible to prescribe a general system of details and methods, as however suitable they may be to one locality and kind of timber they are not necessarily so elsewhere. True forest efficiency can only be obtained after careful local inspection. For instance, requests have lately been made to open up the forest reserves to logging, stating that much of the pine timber is over mature. This is true, but generally speaking this condition has always existed and therefore is nothing new. It was wise to create these reserves, for while they have been earning nothing—no gross volume increment—for lack of efficient cutting and control, the advance in the price of timber and pulpwood has enhanced the value of the timber stand, and this value can be added to capital account. The cuttings can yet be systematically ordered. Let the reserves still be preserved until we have a fully manned and competent staff of Crown Foresters.

The experience of some of our soldiers in European forests will indicate to them the general idea.

Of the past, let nothing be said. Of the present, the desire is manifest for the greatest efficiency, therefore let the two recommendations which have been outlined be put in force immediately. Of the future, on forest methods "fiat lux."

The stockholders of the Buffalo Forge Co., Buffalo, N.Y., recently held a meeting and elected the following officers for the coming year: Henry W. Wendt, President; Edgar F. Wendt, Vice President and Treasurer; Henry W. Wendt, Jr., Vice-President and Secretary; C. A. Booth, Vice-President and Sales Manager. The new directors include the above-named officers and, in addition, Mr. H. S. Whiting.

Lumber Trade Loses Valuable Customers—Who is to Blame?

By R. J. Blair, Pathologist, Forest Products Laboratories of Canada, McGill University, Montreal

R. J. Blair, Montreal, Forest Products Laboratories

The question appearing in the title of this article may be answered briefly by saying that it is the lumbermen themselves who are to blame. Whenever there is sold any commodity which does not give good satisfaction it is usual to assume that it is not the final purchaser who is at fault. If, however, he is to blame, it is the duty of the merchant who sold him the goods to educate him as to a method of using them properly so that he may remain a satisfied customer who will continue to do his business with the same firm.

It has been found that several users of lumber have not been successful in using wood in the construction of their buildings and as a result have begun to use building materials other than wood when making additions and

repairs to their plants. If the lumber trade is to hold a number of customers which it is in danger of losing and get back some of those already lost, it will be necessary to train its dealers and retailers in such a way that when they sell lumber the final purchaser will so use it as to get the best results.

When used as a structural material in large buildings wood possesses certain advantages that are not found in any material used in competition with it. The only disadvantages, which accompany wood when put to such uses, are its inflammability and that, in certain cases, it is liable to be attacked by decay so that its usefulness is impaired and entirely destroyed in a short time. The first of these drawbacks may be taken care of by a reasonable system of fire protection, while the second results every time from an improper use of the wood. In practically all instances where wood gives unsatisfactory service on account of its rapid decay, such failures might have been predicted and if certain precautions had been exercised at the start, the trouble and loss of valuable timber might both have been avoided.

Unsatisfied Results Investigated

For more than four years an investigation has been in progress at the Forest Products Laboratories which has had as its aim the determination of the conditions found in buildings which bring about such losses. To date conditions in more than 165 mills and industrial plants of various kinds have been studied to find what favors decay in the wood which is any part of the building.

In certain of the large Canadian mills it has been found that

when a renewal of some part of the building was being made following the decay of timber after a short service, the parties concerned refused to continue the use of wood. Every one of these customers who did not go back to the lumber trade for his new supplies was a good customer, and in most cases he is a lost customer as far as the lumbermen are concerned.

The rotting of structural timber is no more mysterious a phenomenon than the moulding of pastry, the fermentation of fruit juices, or the souring of milk in warm weather. Decay in wood is a process comparable to these everyday occurrences, all of which are caused by the normal activities of certain low forms of plant life. Wood-destroying fungi are plants which grow only upon wood when there is present within it the amount of moisture which is necessary for their development. Whenever wood is used in any building in such a way that the moisture required to sustain such fungus growth is present, it is almost a certainty that some of the wood-destroyers will set up a process of decay.

It has been found that there are four principal ways in which this moisture gets into the wood.

The first of these is when poorly seasoned wood is used in a building of heavy construction with no means provided for properly drying it.

The second is where water reaches or gets spilled upon wood and maintains it at a proper degree of moisture for fungus development.

The third is where timber is exposed to the moist air of damp basements.

The fourth and most important occurs in the roofs of buildings with moist conditions of occupancy such as pulp mills, paper mills, textile mills, dye-houses, tanneries, bleacheries and canneries.

Decay in Large Building Timbers

For buildings of heavy mill construction decay in the timber may be avoided if the wood is well seasoned when put in place provided that it remains in this condition. If, however, the timber gets wet during erection a heating system should be installed as soon as possible so as to dry the wood out before it gets a chance to decay. For the trouble which results from water being spilled upon or leaking onto the wood the only thing to do is to prevent this from happening.

The trouble in moist basements may be taken care of in various ways. If it is possible to ventilate the basement sufficiently to dry out the air timber may be used in it with no danger of decay. However, it is not always possible to do this in a basement extending over a large area.

Another type, of basement which it is impossible to ventilate, is the basement of a building entirely surrounded by other buildings. In such cases decay in the timber may be prevented by the installation of a few heating pipes which heat the air near the ceiling of the basement a few degrees. The amount of moisture present in wood is controlled by moistness of the air surrounding it, and the

Rotted roof-planks in an Eastern cotton mill

Main timber support in the roof of Canadian pulp mill

Fungus Growths on Timbers and Laminated Floors

addition of heat may lower the capacity of the air for holding moisture to such an extent that wood exposed to it will stay too dry to be attacked by fungus.

The Decay of Roof Timber

The most important of all these losses is that sustained in the roof timber of buildings where the air is moist at all times and a safe solution seems to lie in the adoption of an entirely new system of roof construction. A great many types of roof have been used for such buildings but all have been failures. The common fault in every case is that moisture enters the spaces between the planks and reaches the upper side of the roof. In cold weather this part of the roof is always cold so that the moisture condenses, soaks into the wood and thus promotes the growth of fungus. In designing a roof which will be free from such troubles two things may be done. The roof should be built of wood which naturally resists the action of decay and there should be placed in its interior a water-proofing layer such as three sheets of mopped tarred paper. Such a roof as this is thicker than the ordinary roof but by reducing the heat loss it will pay in any place where artificial heating is supplied in cold weather.

Briefly stated the proposed type of roof construction is as follows: A 2 in. plank of decay-resisting wood is first laid down for the roof. For the Canadian market Western red cedar seems to be the best choice for this part of the construction. It is very resistant to decay and, on account of its low weight, its value as a heat insulator is higher than that of any of the species commonly used. On top of the 2 in. of cedar are placed three plies of mopped tarred paper. This layer prevents moisture which enters the spaces between the planks from getting to the upper side of the roof in cold weather. On top of this water-proofing layer are placed two or more inches of an inferior grade of any lumber which has been given a simple preservative treatment. This layer of wood merely keeps the tarred paper at the interior of the roof warm, so that moisture condensation cannot take place at that point. It is suggested that a very low grade of lumber be selected for such an insulating layer and that this material be boiled in hot creosote oil. Although in its natural condition this lumber could not be compared at all with material of a high quality, after such treatment it would when placed as an insulating material on the roof of a paper mill have an actual worth, at least, double that of the lumber which is in general use.

The time necessary for such treatment would depend upon how long it would take for the wood to get saturated with the preservative. The ease with which penetration takes place depends upon the wood used and the degree to which it is seasoned. Sapwood, provided it is dry, takes up the preservative very easily. Strength is one of the points of least importance which need consideration in making a selection of wood for such use in roofs. The most suitable material might be selected from logs taken from the tops of pine trees, where there is a high percentage of sapwood with large knots. Next to this would come sapwood of any kind whether stained or partly rotted. If three inches of such insulation were used on a cedar or concrete roof-deck, a lot of incipient decay could be allowed in the two lower inches, provided that boards of sound sapwood were used for the upper layer which carries the built-up roof covering.

Summary of Points to Be Observed

1. Customers who have given up the use of lumber be-

Fungus plants on timbers in spinning mill basement

cause it rots need to be educated to use it in such a way that it cannot decay.

2. Wood rots because fungus plants grow within it and destroy it. To prevent such growth it is necessary that the moisture required by the fungus be prevented from entering the wood.

3. Unseasoned lumber should not be put into a building of heavy timber construction unless provision is made for drying it out as soon as the building is finished.

4. Ventilation or the installation of a few heating pipes will permit the safe use of timber in damp basements.

5. A layer of wood for heat-insulating purposes should be placed on the roof-deck of any building where a wet manufacturing process is carried on. This layer should be kept dry. An inferior grade of lumber treated with creosote is recommended for this part of the roof-deck.

Spruce Logs Bring Record Prices

Thirteen million feet of spruce logs have been sold on the Miramichi river, N. B., at the highest price ever obtained for such a quantity of round lumber in New Brunswick. The deal was recently put through at Blackville, N. B., by Mr. Archibald Alcorn, who is manager of the Nashwaak Pulp & Paper Company on the Miramichi. He sold the logs to the Fraser Companies, Limited, at \$25 a thousand for part of it and \$23 a thousand for the balance.

Last year Mr. Alcorn sold some logs to the Ritchie Company of Newcastle, on behalf of the Nashwaak Pulp & Paper Company, at \$25 a thousand, but the quantity was small. Speaking about conditions in New York, Mr. Alcorn said that, during a recent visit there, the high cost of sawn lumber and the rate of exchange were the principal topics in business circles.

W. B. Snowball, of Chatham, N. B., who was in St. John recently said that the winter had been an exceptionally good one for lumbermen along the North Shore and that this year's cut would exceed that of last year by at least twenty-five per cent. He reports that wharves and yards along the Miramichi are piled high with Admiralty and other overseas stock which will have to be moved early in the season to enable the shipping of this season's cut, which is destined largely for the American market.

Regarding the price of laths he said it is very high this year, \$14 and \$15 a thousand being offered for ground wood laths and as a result quite a few mills have already started sawing. Mr. Snowball said that this is the first year that such operations have been conducted along the Miramichi, but the prevalent high prices have afforded operators an opportunity to dispose of the smaller logs in this manner at a good profit.

The heavy snow storms this month, he said, has assured good brook driving and as everything else has been favorable he is looking for a very successful season. Wages in the lumber camps are from fifteen to twenty per cent. higher than was paid last year and as men are plentiful there is the best of spirit prevailing between the operators and their employees.

An eastern company are hitting up spring trade in a novel way. They have made up 800 ironing board cabinets in pine. And they are going like hot cakes too. Perhaps your wife may want one.

Midland Company is Extending Activities

Fred M. Beatty, Midland, Ont.

Midland Woodworkers, Limited, of Midland, Ont., was re-organized in October last and took over the business formerly operated by the Georgian Bay Shook Mills. The new company is under entirely new management and the officers are: President, A. H. Vanderburgh, of Toronto; Vice-President, W. H. Firstbrook, of Toronto; Secy.-Treas., R. H. Scrivener, of Midland; Director, W. Benson, of Penetang; Managing-Director, Fred M. Beatty, of Midland.

The Company decided to discontinue the manufacture of box shooks as carried on by the old concern and to devote its entire plant to the making of doors, sash, mouldings, general millwork and hardwood flooring, veneer panels. A heavy stock of lumber, including hardwoods,

pine, spruce, hemlock and B. C. stock is carried and the factory is in shape to make up almost anything required in millwork. The plant is splendidly outfitted with machinery and with the addition of some machines, which are being put in, will have one of the best equipped mills of its kind in Canada.

It is planned to develop the business as much as possible, particularly in the hardwood flooring department and one or two of the others. The capacity of the door plant at present is about 250 doors per day and this will be doubled before very long. The department for making up veneer doors is well equipped with modern veneer machinery. The Company has one of the finest waterfronts on the Georgian Bay and is able to unload millions of feet direct from the lumber barges to the pile which gives a low lumber cost on stock brought in by water.

The managing-director, Fred M. Beatty, has had fifteen years experience in this line of work, the most of it being in plants in Edmonton and Saskatoon. He moved from Saskatoon to Midland last summer. He is a brother of W. R. Beatty, of Pembroke, secretary-treasurer of the Colonial Lumber Co. and former Mayor of that town.

Mr. Wightman Launches New Company

The Wightman Lumber Co. Limited, of which Geo. E. Wightman is managing director, have opened offices in Bathurst, N.B. The new company will be of service both to the consumers of Eastern stock and to the mills in that section. Chatham is in the centre of a large producing section and the Wightman Lumber Co. will handle the cuts of many of the smaller mills as well as a portion of the larger mill productions. They will also act as buying agents for several large consumers in the United States and Canada, and already have booked up business of considerable proportions.

Mr. Wightman, who recently resigned from the Gloucester Lumber & Trading Co. to start the new company, knows the lumber business from logging up. He has been located in Chatham for the past seven years, where he is well known and well spoken of.

Committee Will Draft New Lien Act

A deputation from the Provincial Builders & Supply Association recently waited upon Hon. W. E. Raney, Attorney-General of Ontario, and asked that a new Mechanics' and Wage Earners' Lien Act be passed. An agitation along this line has been carried on for some time by the Ontario Retail Lumber Dealers Association, who desire new legislation to replace the present Act, which provides for the supplier of materials only limited protection and enables, in many cases, the speculative builder to get away without paying the retail lumberman in the event of the venture not being successful.

It was pointed out at the recent meeting of the Ontario Retailers in Hamilton that the unscrupulous contractor, or owner, or a combination of the two, can, under present conditions, take long chances in speculative building, or even in ordinary building for occupation. If the speculation turns out successfully the owner or contractor loses little or nothing, except his prospective profit, while the lumber dealer is lucky if he recovers a small fraction of the cost of the material he has supplied. Responsibility, under the present act, is not placed where it should be. The person who stands to benefit from the erection of the building should carry all the responsibility. Undoubtedly this was the original intention of the framers of the

present act, but it has been affected by many judicial interpretations and amendments and often has worked out otherwise so that the owner or contractor, if he desires to do so, can shift the loss on to the shoulders of the man who supplies the material.

Hon. Mr. Raney promised the deputation that a committee would be appointed during the present session of the Legislature to take into consideration the representations of the Builders & Supply Association, contractors, architects, retail lumbermen and labor interests. He intimated that a representative from each of these bodies would be appointed to serve on the committee, and that several meetings would be held during the coming year, when a new measure could be drafted that would be modern and effective.

That such a committee is to be named and that the various interests concerned in the operation and application of the Act will be consulted and a new bill introduced next year will be welcome news to all concerned and to the retail lumbermen in particular.

Valuable Prizes in Roarin' Game

They have been having some interesting curling matches up at Fort Frances, Ont., owing to the generosity of the Shevlin-Clarke Lumber Co. and the Fort Frances Pulp & Paper Co. The latter recently offered a beautiful silver cup for an inter-rink competition while the Shevlin-Clarke Co. contributed in another competition valuable trophies. The prize for first place was four sets of beautiful curling stones, valued at \$160.00, and the losing quartette in an inter-rink combat was given four excellent sweaters. The generosity of the Fort Frances Pulp & Paper Co. and the Shevlin-Clarke Co. is much appreciated.

New Sawmill Soon to Start at Merritt

The Nicola Pine Mills Limited of Merritt, B.C., state that their new sawmill which they have been constructing, will be in operation early next month. The capacity will be 125,000 feet in ten hours. The company have also erected a new planing mill which started up last month. It will be remembered that the Canford mill of the Nicola Pine Mills Ltd. was destroyed by fire in May last, the plant and stock being a total loss. The company began operating a small mill at Brookmere shortly after, with a sawing capacity of 40,000 feet a day. The company report that the trade outlook for 1920 is excellent and that their log output will be larger this winter than ever. There was an increased demand in 1919 from the U. S. and the shingle and lath market were particularly active.

Says C.P.R. May Build Sawmills

If the lumber situation becomes acute on the prairies within the next few years, President E. W. Beatty, of the Canadian Pacific Railway, has promised that his company will undertake to provide relief by building mills on its extensive limits, says a Calgary despatch. It performed a similar service some years ago. The C. P. R. is deeply interested in the lumber situation. It has to buy heavily for its railway purposes, it has been supplying houses on its "ready-made" farms, and it is required to exert a paternal guardianship over the welfare of the farmers who buy unimproved C. P. R. lands.

New Director is Progressive Retailer

D. C. Baird, who was recently elected a director of the Stratford branch of the Ontario Retail Lumber Dealers' Association, is widely known in Perth County. He has been conducting a progressive lumber yard in St. Marys, Ont., for thirteen years, and also runs a general planing mill and box factory. Previous to launching out on his own behalf, he was a member of the Brown Co., Limited; then he began making boxes in a small way and worked up into a general planing mill business.

Mr. Baird has a splendidly-kept yard, neat office and well laid out sheds, and handles all kinds of lumber, lath and shingles. He is a live member of the O.R.L.D.A. and thoroughly believes in organization. The district of Stratford was largely brought into line through his activity and influence. He was one of the most interested and enthusiastic attendants at the recent convention in Hamilton.

Litigation Over Lumber Camp Thirteen

The Second Divisional Court, Toronto, dismissed the appeal of the Abitibi Power & Paper Company from a conviction and fine of \$551.35 made by the Police Magistrate at Iroquois Falls. The company operated a small lumber camp on a creek emptying into the Abitibi River, and the complaint on which the conviction was based was laid by the Medical Health authorities, who claimed that the location of the camp was dangerous in that it drained into the town's water supply. The number of the camp was "13."

Exports to United States Decrease

The report of the Ottawa Consular District to the United States for the calendar year ending December 31st, 1919, as compared with the same period in 1918, showed a total decrease of over a third of a million dollars in lumber.

Lumber				
	1919 Feet	Value	1918 Feet	Value
Dressed lumber	22,644,448	\$928,606	26,676,814	\$935,639
Tongue and groove	389,425	16,531	970,395	33,804
Rough lumber	81,717,108	3,686,159	137,807,239	4,006,019
Total	104,750,981	\$4,631,296	165,454,488	\$4,965,462

Lath, Pickets and Shingles				
	1919 Pieces	Value	1918 Pieces	Value
Lath	81,007,000	\$282,141	35,453,000	\$ 67,314
Pickets	12,651,000	97,008	6,626,000	58,217
Shingles	10,358,000	52,411	10,229,000	32,221
Total	104,016,000	\$431,560	52,308,000	\$157,752

Pulpwood				
	1919 Cords	Value	1918 Cords	Value
Peeled pulpwood	49,202	\$491,863	17,146	\$174,292
Total value of exports, 1919,		\$5,554,719.		
Total increase over 1918,		\$257,213.		

Exports for Last Three Seasons

	1919	1918	1917
Value	\$4,631,296	\$431,560	\$491,863
Feet, pieces or cords	104,750,981	104,016,000	49,202
Value	\$4,965,462	157,752	174,292
Feet, pieces or cords	165,454,488	52,308,000	17,146
Value	\$3,895,288	223,238	33,416
Feet, pieces or cords	148,970,659	63,300,000	4,847

Forest Exports from Quebec City

The annual report of E. H. Dennison, American Consul at Quebec, is an interesting one, and shows the quantities and values of declared exports from that city to the United States during the year 1919, and a comparison with the preceding year.

In the line of lumber, wood products, pulp and paper, the returns are as follows:—

Articles	1918 Quantities	1918 Value	1919 Quantities	1919 Value
Lumber, planed, M. ft.	14,617	\$ 462,844	15,532	\$ 592,780
rough, M. ft.	106,492	2,851,174	58,404	1,978,336
Cedar posts, No.	65,743	5,789	2,149	905
Laths, M. ft.	7,878	32,318	31,508	113,461
Shingles, M.	3,786	12,313	7,783	35,151
Shooks, Cases	11,320	28,208	7,945	20,630
Ties, No.	860	580	87,314	73,881
		3,393,226		2,815,144
Woodpulp—				
Mechanically ground, lbs.	156,744,490	2,318,448	101,104,628	1,501,641

Rough, cords	145,148	1,224,216	111,373	1,065,990

Use of New Woods in Air Crafts

"Supplies and Production of Aircraft Woods" prepared by the National Advisory Committee for Aeronautics in the United States is the name of an interesting publication which thoroughly covers a rather new field of inquiry. The report deals in detail with the various woods available for use in the construction of aircraft, not only those which were tried out during the war, but such as are likely to be found of service during the coming years, in this great branch of commercial and industrial development.

The report also shows the amount of lumber of each species of wood normally put on the market each year.

A general statement is given of the uses of which each kind of wood is or may be put, but no attempt has been made to go into a technical discussion of these various uses.

The information contained in this report has been compiled from a great many sources, including principally published and unpublished reports by various members of the Forest Service. Many of

the figures given, particularly those relating to amounts of standing timber, are only crude estimates, but until there is a census of the forest resources of the country the authorities will have to depend largely on guesswork. The figures on production of lumber are taken from the annual lumber census reports and may be relied upon. Estimates as to the proportions of the total lumber production of different species that may be suitable for the manufacture of aircraft are necessarily very general, and are open to modification as methods of sawing or as airplane specifications change.

It is believed that all the species used to any extent or approved for use in American aircraft are included. However, specifications in all probability will be changed as the industry develops. Consequently, the use of many kinds of woods not now considered suitable may eventually be allowed.

Statements regarding the uses of the different woods are included in order to give an idea of the industries with which aircraft manufacturers will have to compete for their lumber supplies. The figures published were obtained several years ago and hence may not exactly represent present conditions, since the annual production of lumber of many of the species has changed considerably in the interval.

The maps that accompany the report show by dots the approximate locations of the mills that in 1917 produced the largest amounts of the lumber of most of the species covered. These maps, therefore, indicate in a general way the sources of commercial supplies of the various species.

A copy of Report No. 67 entitled "Supplies and Production of Aircraft Woods," may be obtained upon request from the National Advisory Committee for Aeronautics, Washington, D. C.

Many New Western Companies

Recent incorporations in British Columbia include the following:

Eagle Shingle Mill Co., Vancouver, capital \$10,000.
North Shore Shingles, Vancouver, capital \$25,000.
Rivers Logging Co., Vancouver, capital \$20,000.
B. C. Lath and Timber Products, Vancouver, capital \$10,000.
Webber Lumber Co., Port Haney, capital \$25,000.
N. J. Hansen Lumber Co., Vancouver, capital \$20,000.
Canadian Stucco Wall Board Manufacturing Co., Victoria, capital \$50,000.
Prospect Lumber Co., Victoria, capital \$20,000.
McNair Lumber & Shingle Co., North Vancouver, capital \$25,000.
Masset Touring Co., Vancouver, capital \$10,000.
Seaborne Mills & Logging Co., Vancouver, \$100,000.
Northern Cedar Company (incorporated in the state of Idaho); registered to do business in British Columbia; \$125,000; head offices, Sand Point, Idaho, and Nelson, B. C.

Want Ruling on Certain Claims

The directors of the Wholesale Lumber Dealers' Association, Inc., Toronto, are at present working on a form, on which members will be asked to submit to the secretary statistical information relating to their overcharges and other claims against railway companies, going back over a stated period. When this information has been secured, it is expected that it can be compiled into material for a case to be laid before the Dominion Board of Railway Commissioners in order to secure a ruling which will in future remove a great deal of the difficulty in connection with this matter.

Decay in Paper-Making Qualities of Wood Pulp

Clean groundwood pulp and pulp infected with molds and fungi have been used in recent comparative paper-making trials at the Forest Products Laboratory, Madison, Wisconsin. These trials showed that infected pulp was inferior to clean pulp in the following respects: The infected pulp produced a very dirty sheet. It required more sizing than the clean pulp. It stuck to the couch and press rolls and gave trouble from excessive foaming.

Although groundwood pulp is usually considered too slow, the extreme freeness of the infected pulp caused difficulty in carrying the necessary amount of water on the paper machine to secure a good formation in the finished paper.

Based on the percentage of groundwood, the infected pulp used in the experiments yielded 10 per cent. less finishing paper than the clean pulp.

The strength of the finished paper was greatly reduced by the use of infected pulp. In a groundwood sulphite finish, this decrease in strength would necessitate the use of a larger percentage of the more expensive sulphite pulp.

Better Lighting in the Lumber Camps

How Portable Power Installations Contribute to Comfort, Convenience and Economy

In a paper read before the Woodlands section of the Canadian Pulp and Paper Association in February 1918, Mr. Sabbaton, of the Laurentide Company, Limited, made a strong plea for the betterment of conditions in lumber camps, and in woods operations, arguing that this branch of the lumber industry has been neglected in comparison with the thought and care given to the proper running of mills. The two problems did not differ materially in their basic principle—the proper studying out of equipment and the careful training of special labour. "Is it not", he asked, "necessary to put away any preconceived idea as to how certain kinds of work shall be accomplished and, at least, try out that which at first appears to be rather radical and drastic methods?"

Everyone will admit that there has been a wonderful change in camp conditions as compared with forty years ago, but something yet remains to be done. A recent report of the Logging Committee of the Woodlands section of the Canadian Pulp and Paper Association made some strong recommendations as to both methods and equipment. The old methods have gradually given way to new ones, and in place of the open fire used for heating, cooking and lighting, we have much more modern conveniences for the comfort of the woodsmen.

In the old days the cross cut saw was unknown; the trees were chopped down, and the operations were carried on with little consideration to the damage done to the forests. Education has effected a revolution in this direction, and in preventing waste, a waste which involved millions of dollars, although there is still much to be done in the way of the more economic use of our forests. Examples of this waste can be seen on land cut over years ago, where the stumps were cut from three ft. to seven ft. from the ground, and with possibly twenty ft. cut from the butt.

Our large camps have been modernized, and now we find some with electric lights and with provision made for hot and cold water. Portable power installations are on the market, and besides giving current for lighting purposes, can be turned to very useful account in the matter of running the grindstone, saw gummer, and in the blacksmith shop, including an electric blower for the forge, power grinder and drill. In addition to this, we have the portable electric drill and boring machine.

A lumberjack of the old school would hardly know a modern camp equipped with labor saving and convenience devices. Then everything was done by hand,—even to the hewing out of sleds. The advantage of such outfits as the portable power plant is that it not only saves labor, but does the work economically and quickly. In these times of ever-mounting costs and lower production of manual labor such considerations are not to be disregarded.

Motor Trucks and Trailers in Lumber Business

It is within the lives of comparatively young people that gasoline engines were first used to propel pleasure vehicles, and their use for this purpose came ahead of their application to freight transportation. Pleasure came first, but it did not take long for the enterprising builders of automobiles to recognize the profit which would follow their adaptation to industry. To-day, the horse is disappearing from the streets and cities and towns because it has been found that gas traction can do more work and do it cheaper, and that the greater portion of the expense of operation comes only while the machine is working. Moreover, it has developed that the pleasure car can be put to work without spoiling it for pleasure purposes. By the use of a trailer which can be easily uncoupled the delivery of small loads of merchandise can be quickly and cheaply made.

It may be thought that the use of gasoline traction is not economical excepting where the volume of business is large and the motor can be in almost constant use. The largest expense is the initial cost of the machine, and motor trucks that will do good work are not cheap. The larger the first cost, the more work there should be for a truck if its use is to be economical in comparison with horses; but the truck builders have developed their business so that light trucks at low cost may be obtained at prices not much, if any, higher than the cost of a good team of horses. Furthermore, they have produced the trailer which can easily be attached to any automobile, and which will deliver small loads cheaper than they can be delivered by team.

The pleasure car itself can be made a profit car. Every retail dealer in lumber in a country community can do more to build up business by personal visits to prospective customers than in any other single way. He need not take time out of business hours to

make these visits. After the day's work at the yard has ended, he can get both relaxation and profit by getting into his automobile and going out among the farmers. He can cover more ground than he ever could behind a horse, and he does not have to think of sparing the horse for the work of the next day.

Developments in the retail lumber business in recent years have all been in the direction of giving more and better service. Even before the motor car came into existence it was customary for retail dealers in many localities to make town deliveries. Few, if any, of them ever tried to make deliveries of building material in the country. With the development of gasoline traction there has come the possibility of delivering lumber to farmer customers, and before many years the practice will be common. In the past, it has not been uncommon for a farmer to enlist the aid of several of his neighbors in a hauling bee, and a half a dozen teams or more would appear at the lumber yard to haul out a large barn or house bill. With the rapid delivery possibilities of the motor truck such a bill can now be delivered as quickly by one vehicle in two or three trips. And the ownership of a truck by the retail yard will prevent many delays that would otherwise be made in building. Before, the building of a farm structure had to wait on the time of the farmer to haul the material out. Many a building will now be put up that would not have been erected when the farmer had to haul the material out himself.

The use of the motor truck ought to appeal with special force to the line yard concern with yards in adjacent towns. During the past year it has been difficult for the retail dealers to get delivery of stock from the mills and many line yard concerns have been obliged to ship lumber from one yard to another. The use of the motor truck makes this simple and cheap, and eliminates the delay and effort incident to making such transfers by means of rail. In fact, the uses of trucks and trailers in the business of the dealer in building material are so many and varied that this class of merchants will soon see the advantages to their business which are made possible by gasoline traction.—Mississippi Valley Lumberman.

Power to Arbitrate any Difference

Under a bill prepared by the Quebec Government, wider powers are given to the Quebec Public Utilities Commission. One clause relates to lumber mills. When there are two or more lumber companies operating on the same river, there is often difficulty as to when logs of the companies are to be floated down and the Utilities Commission's powers are extended to provide that it shall arbitrate such difficulties.

The Lumberman's Ten Commandments

1. Thou shalt not wait for something to turn up, but thou shalt pull off thy coat and go to work that thou mayst prosper in thy affairs and make the word "failure" spell "success".
2. Thou shalt not be content to go about thy business looking like a loafer, for thou shouldst know that thy personal appearance is better than a letter of recommendation.
3. Thou shalt not try to make excuses, nor shalt thou say to those who chide thee, "I didn't think."
4. Thou shalt not wait to be told what thou shalt do, nor in what manner thou shalt do it, for thus may thy days be long in the job which fortune hath given thee.
5. Thou shalt not fail to maintain thine own integrity, nor shalt thou be guilty of anything that will lessen thy good respect for thyself.
6. Thou shalt not covet the other fellow's job, nor his salary, nor the position that he hath gained by his own hard labor.
7. Thou shalt not fail to live within thy income, nor shalt thou contract any debts when thou canst not see thy way clear to pay them.
8. Thou shalt not be afraid to blow thine own horn, for he who faileth to blow his own horn at the proper occasion findeth nobody standing ready to blow it for him except Gabriel.
9. Thou shalt not hesitate to say "No" when thou meanest "No," nor shalt thou fail to remember that there are times when it is unsafe to bind thyself by a hasty judgment.
10. Thou shalt give every man a square deal. This is the last and great commandment and there is no other like unto it. Upon this commandment hang all the rightful profits of the lumber business.

Belgo-Canadian Sawmill Most Compact One

Equipment is Complete and Economically Operated — Ample Planing and Dry Kiln Capacity—Activities of the Various Departments

One of the most complete and economically operated industries in the lumber line in the province of Quebec is that of the Belgo-Canadian Pulp and Paper Company, Limited, of Shawinigan Falls. The capacity of the sawmill is from 50,000 to 70,000 ft. B.M. per day of ten hours, depending on the size of the logs. The highest average daily production for one season of six and one-half months, running ten hours per day, was 56,000 ft. and the lowest 49,000 ft. with a daily output of about 8,000 ft. of box boards.

Panoramic view of yard from the front of Belgo-Canadian Co.'s Sawmill at Shawinigan Falls, Quebec

The sawmill is of wood frame construction with posts set on concrete pillars and sides and roof of corrugated iron. On the ground floor the company have all the main driving shafts with ring oiling bearings, which are placed on concrete posts to reduce the fire risk from hot bearings. On the same floor there is a 16 x 16 Robb Armstrong engine with governor in fly wheel which turns 260 r.p.m. and drives the sawmill machinery and box board mill. On the sawing floor are a circular saw, with steam feed steel carriage, steam nigger and steam loader, a band resaw for reducing the slabs to lumber, one double edger, carrying eight saws, which handles the lumber from both resaw and circular.

The lumber is all conveyed by live rolls and transfer chains to the trimming table where it is graded and marked and then it

Side View of Belgo-Canadian Co.'s Sawmill at Shawinigan Falls, Que.

continues on chains to the sorting rolls where it is sorted as to width, length and quality. From these rolls it is moved onto a truck equipped with rolls and is drawn by a horse to the yard.

The slabs and edgings go through a slasher and are cut into four foot lengths falling into a conveyor where the box board stock is picked out and converted into box boards by a Mereen Johnson horizontal band resaw.

After all the box wood has been taken out all the refuse continues on to a Mitts & Merrill hog and a Carthage chipper where it is converted into chips, which fall into a bucket elevator and are dumped into a 20 x 20 circular tank placed on an iron framework which allows teams to pass under with dump wagons, which are loaded by opening a sliding door in the bottom of the tank. The chips are then carted to the paper mill and used to generate steam.

The equipment of the sawmill was all manufactured by the E. Long Manufacturing Co., of Orillia, with the exception of the resaws which were supplied by the Mereen Johnson Machine Co., of Minneapolis, Minn.

The boiler house is constructed entirely of concrete, brick and iron, with two Goldie & McCulloch boilers of 150 h.p. each, carrying 120 lbs. steam pressure, fired with saw dust in specially constructed saw dust burning dutch ovens and the necessary pumps and injectors for water supply.

The planing mill and dry kiln have concrete and solid brick walls with metal covered wood roof on the planing mill and tile and concrete roof on the dry kiln. In the planing mill the company have one Yates band resaw, one Yates circular resaw, one No. 94 Yates planer, plug machine, and swing cut-off saw, all driven by individual electric motors. The electric current is supplied by the Shawinigan Water & Power Co.

The Belgo-Canadian Co. have ample planing and dry kiln capacity for the amount of lumber produced. They manufacture spruce, red and white pine for the English and American markets and the company's logs, which are mostly all 13 feet long, are floated down the St. Maurice river. All lumber shipments are made entirely by rail, by means of the Canadian Pacific and the Canadian National railways.

H. Biermans is general manager of the Belgo-Canadian Pulp and Paper Co. and also President of the Canadian Export Paper Association, devoting his time principally to the pulp and paper end of the organization's extensive activities. H. E. Howe is the manager of the lumber and sawmill departments with which he has been associated a number of years. He is well known in the industry, particularly in the East, and is an enthusiastic member of the Canadian Lumbermen's Association.

Sudden Death of Mr. G. R. Munro

Suddenly and untimely, indeed, was the death of Mr. George Reid Munro, 2nd Vice-President of The William Hamilton Company, Ltd., Peterboro, Ont., which took place Monday, March 1st, at his residence in that city, after a short illness of influenza. Mr. Munro was apparently recovering when he was seized with a sudden attack of heart failure and the shock proved fatal.

The late Mr. Munro, who was a grandson of the late Wm. Hamilton, founder of The William Hamilton Co., of Peterboro, was born in that city, March 13th, 1887. He received his early education at the Peterboro Public Schools and the Collegiate Institute and later graduated from the School of Practical Science, Toronto. After graduation, he was engineer on the preliminary survey of the Hudson Bay Railway, then on the staff of Messrs. Kerry and Chase, Consulting Engineers, Toronto, and was also connected for a short time with Mr. R. S. Lea of Montreal. In July, 1911, he returned to his native city to take the position of Engineer with The William Hamilton Company, which post, as well as the Vice-Presidency of the company, he held at the time of his death. He was a member of the Engineering Institute of Canada and first President of the Peterboro Branch of that Society, and took an especial interest in its organization. He was also a member of the Peterboro Board of Trade, and always took a deep interest in anything that pertained to the city's development and welfare.

Mr. Munro was a young man, highly esteemed by all for his genial disposition, his true friendship and his upright qualities, which won for him a host of friends in all walks of life. His death will be more than a loss, not only to the company he so well and faithfully served, but to his native city, where he was always regarded with the greatest esteem by all who knew him.

The "Canada Lumberman" joins in extending sincere sympathy both to his family and relatives and to the William Hamilton Company.

Steady Advance Among Ontario Retailers

Convention of Lumber Dealers at Hamilton Marked by Extended Activities and Progressive Work—Some Practical Results of Splendid Gathering

The third annual convention of the Ontario Retail Lumber Dealer's Association, which was held in Hamilton on February 23rd and 24th, was largely attended and marked another step forward in the advancement and usefulness of this progressive organization. Over one hundred representative retailers were present, coming from as far east as Ottawa, which sent a large delegation, and from the West as far as Sault Ste. Marie.

The reports presented were of a most interesting and encouraging character and covered many branches of activity in various lines of work. A summary of these was published in the last edition of the "Canada Lumberman," and reveals the fact that, while not a great deal is heard from time to time of the workings of the O.R.L.D.A., still, through its organized districts and local branches, it is accomplishing much in the upbuild and welfare of the retail lumber industry.

Many important matters were touched upon in the resolutions, which covered the extension of the work of the Association in various directions.

After ably filling the office of president for two years, Mr. Thomas Patterson resigned the position and was accorded a hearty vote of appreciation. His successor, John B. Reid of Toronto, has long been a great booster for co-operation and optimism, and the lumbermen's guild, under his guidance should continue to make praiseworthy progress. E. M. Barrett, of Ottawa, who was elected vice president, is another staunch advocate of organization and "get-together". He has been chairman of Legislation and Transportation Committee, and an alert pusher in this line of work. Most of the old directors were re-elected, although there is some new blood in the Executive. The various features, both business and social, were splendidly balanced and from the time the convention opened on the afternoon of February 24th, until it closed with a brilliant banquet on the evening of February 25th, there was not a lifeless moment. The Hamilton men did everything possible to make the stay of the visitors pleasant and memorable, and that they succeeded is amply attested by the presence of such a splendid gathering of retailers and many guests from the travelling, wholesale, manufacturing and other branches of the business.

Some of the Work in Hand

Among the progressive moves made by the Association were the recommendation that Made-in-Canada goods be bought wherever possible, in view of the adverse rate of exchange; that the Ontario Retail Lumber Dealers should become incorporated; that the efforts to secure a new Mechanics' Lien Act should be pressed; that more attention should be given to a complete and accurate cost accounting system; that Legislation should be passed, providing that all labor unions should be incorporated; that a more progressive and effective

policy of forest preservation should be adopted; that the income tax should be substituted for the business profits tax; that a special committee be appointed to take up the question of standard millwork sizes and of standardized moulding designs; that weigh masters should be in the employ of the Railway Board of Canada instead of the Railway Companies; that a committee be appointed to act on the subject of lumber grading rules and confer with representative committees from the Canadian Lumbermen's Association and the Wholesale Lumber Dealers Association; that an expression of opinion be secured regarding the proposal for the creation of a traffic department and freight audit bureau; that an effort be made to draw up an order form which will be acceptable to all concerned, etc. Other matters upon which action was taken was the decision to continue the trade relations committee, to hold the regular midsummer outing and to have the next annual gathering in Toronto, although Ottawa extended a cordial invitation for the retailers to meet in the Capital city. Among other plans proposed was that more local branches be formed at various centres and everything possible be done by the officers to encourage the extension of this phase of the work.

The present membership of the Association is 160, and everything is moving along splendidly for a big busy year with the O.R.L.D.A.

One rather regrettable incident of the convention was that President Patterson was not able to preside other than in a formal way, having lost his voice temporarily through throat trouble. Among others, who were prevented from the convention through absence were A. Ludlam of Leamington, who is spending the winter in Florida, and W. J. Aitchison of Hamilton, who has been in California for some time. Both of these gentlemen are active workers in the Association, but will be back in the near future to lend it their interest and support.

The great forward movement respecting which so much is heard, is now permeating the rank and file of the retail lumbermen of Ontario and unity, concord and better service are the watchwords of the organization for the coming year.

The Banquet Was Much Enjoyed

The banquet, which was tendered the visiting delegates by the members of the Hamilton lumber trade, was a brilliant and thoroughly charming event, managed on somewhat novel lines, and the pleasant associations will not soon be forgotten.

Thomas Patterson, the retiring president of the Ontario Retail Lumber Dealers Association, presided. Owing to the fact that he was not able to use his voice, due to a temporary affection of the throat, the direction of affairs was taken charge of by H. Boulton, secretary, who kept things moving smoothly.

There were no long tiresome speeches and only three toasts on

D. C. Baird, St. Marys,
Director of O.R.L.D.A., Stratford
Branch

F. E. Hollingsworth, Sault Ste Marie,
Director of O.R.L.D.A., Northern
District

T. H. Hancock, Toronto,
Director of O.R.L.D.A., Central
District

W. J. Aitchison, Hamilton,
Director of O.R.L.D.A., Western
District

Flashlight of delegates to the Ontario Retail Lumber Dealers' Association while making a tour of the plant of the P. B. Yates Machine Co. at Hamilton, Ont., during the recent convention in that city

the programme—"The King," "Our Guests," and the "Ontario Retail Lumber Dealers Association."

The menu was distinctly one of the wood products line, each dish being selected for grade, color and finish, and was as follows:

Knot an Orange Cocktail
C. & C. Face Soup

Salary	Olives
All going in taxes	The kind you pine for
Payne's Chicken—D.4S—This year's cut	
Patterson's Peas—Selected for color	
Potatoes—long run—culls out	
Ices—winter cut	

Maple Cake	Shanty Dough
Long Cigars	Sawdust Cigarettes

The Manchester Male Quartette, Messrs. Hill, Mitchell and Kignon, Miss Miller, Mr. Burry, Codling and Henselwood and others assisted in a programme of songs, duets, monologues and mind-reading.

C. G. Booker, Mayor of Hamilton, extended a warm welcome to the visitors and dwelt briefly upon the importance of Hamilton as a manufacturing centre, the value of patriotism in building up our country and the necessity of attracting the right class of citizens to our shores. His Worship pointed out that the Dominion wanted quality rather than quantity and more people of the English, Irish and Scotch type and less of the foreign element or from those countries which were constantly engaged in strife or bloodshed.

Among the other speakers during the evening were A. C. Manbert, of Toronto, chairman of the Wholesale Lumber Dealers Association, Inc., who delivered one of his characteristically humorous and happy addresses, in which he paid a tribute to the worth, and work of an organization such as the Ontario Retail Lumber Dealers Association.

John B. Reid, of Toronto, the newly-elected president of the Association, acknowledged the toast in a pleasant vein and thanked the Hamilton dealers for their liberality in providing such a delightful entertainment. He referred to the "Forward Movement" in the lumber business and the uplift of the industry through co-operation, unity of effort, social fellowship and the get-together idea.

One of the impromptu features on the programme was a duet by L. D. Barclay of the Canadian Western Lumber Co., Toronto, and J. L. McCormack of Stewart & McCormack, Hamilton.

A vote of thanks was tendered the Hamilton retailers for the enjoyable time they had provided for the travellers who were present in large numbers around the festive board. This resolution was moved by W. F. Oliver, of Toronto, and seconded by Hugh A. Rose, of Toronto.

The programme throughout was one of an unusual character, and established a different kind of function than the set and formal affairs which are usually conducted to the accompaniment of long-speeches. The Hamilton banquet was replete in snap, pep and variety.

Each of the guests during the convention wore a paper disc

about 3½ inches in diameter, which was pinned prominently on the lapel of his coat. On the surface was written the bearer's name, firm he represented, the place he hailed from, etc.

The Chairman of the Hamilton committee of arrangements was Thomas Patterson, president of the Ontario Retail Lumber Dealers Association, who was ably assisted by all the members of the trade. Guy H. Long was in charge of the Reception Committee. Harvey Crosthwaite was secretary of the Entertainment Committee, and E. S. Smith, of the Dominion Lumber & Coal Co., secretary of the General Committee. They all did their work faithfully and willingly and reflected the true spirit and propulsive force of the Ambitious City and its companionable citizens.

Retail Lumbermen Visit Busy Plant

One of the interesting incidents of the annual convention of the Ontario Retail Lumber Dealers Association in Hamilton was the visit of the members to the factory of the P. B. Yates Machine Co., where a pleasant and instructive hour or two was spent. The visitors were shown all through the extensive and well-lighted plant of the company by G. W. Robinson and C. H. Dankert. A group portrait was taken of the party.

The first machine demonstrated was the Yates No. 91 Fast Feed Matcher. This large planer was turning out Manitoba siding at the rate of 275 feet per minute. Its capacity is stock up to 15 in. in width and 6 in. in thickness.

Among other machines put in operation was the No. 108, which is a heavy type moulder, being a combination of a sticker and matcher. Then came Type C3, a fast feed sticker with slip-on heads, fitted with high speed milled bits, which was un on form mouldings, at 75 ft. a minute. Type G2, chain feed edging and jointing saw was the next machine inspected. This is used for accurate straight line ripping, such as core stock. In some instances the goods are taken direct from the saw to the glue-room, eliminating the second operation of truing up stock on the ordinary jointed. The fifth machine was No. 177 double surfer, which has a capacity for stock up to 30 in. wide. It was operating at the rate of 100 ft. per minute, and would double surface as thin as 3/8 in. without tearing out any knots.

Some Features of the Session

One of the hardest-worked committees at the convention was the Resolution Committee, which was composed of J. C. Scofield of Windsor, E. M. Barrett of Ottawa, W. M. Tupling of Orillia. Several motions came up for discussion during the sessions, but were not carried. Among these was one to consider the advisability of appointing a purchasing agent for securing B. C. products. It was intended, if the suggestion met with approval, that a committee should be appointed for conducting a canvass and putting it into effect. But little support was accorded this motion, which was withdrawn.

The same fate overtook another to the effect that the Ontario Housing Act was not working out satisfactorily and that the Association recommend that it either be rescinded or so amended as to make it more practical and effective. Finally a resolution was substituted on

motion of Messrs. Shirton and Tupling, to the effect that the matter of the Housing Act be left in the hands of the Legislative Committee to be taken up with the Government for consideration and to advise more effective plans for the working out of the measure.

One of the members humorously suggested in connection with the mid-summer outing this year that one of the points of interest to be visited should be a lath mill in order to witness just how lath are manufactured since they are so valuable.

Mr. G. W. Robinson, of the P. B. Yates Machine Co., Hamilton, gave a timely address touching upon the reference made in some of the reports in regard to the absence of skilled labor in the woodworking plants. Mr. Robinson pointed out that his firm were willing to co-operate along the line of training and instructing help, and if any of the members desired to send their men to Hamilton in order that they might become acquainted with the operation and management of any of machines, the Yates Machine Co. would be very pleased to give them all the pointers available and do whatever was possible to widen the practical knowledge of such help. If the men remained for a fixed length of time, mutual arrangement would be made whereby they would be paid at whatever it was thought their services were worth. The employer who sent them, would be rebated this much on the purchase of a machine or in return for services directly rendered by his employees during their course of instruction and training. This proposition was open to any member of the Ontario Retail Lumber Dealers' Association whether he purchased a machine or not from the company, there being no obligation whatever in this respect. Mr. Robinson's candid address and generous offer were well received by the convention.

Seaman-Kent Co. Entertain Visitors

One of the outstanding features of the recent convention of the Ontario Retail Lumber Dealers Association, which was held in Hamilton, was the special exhibition of moving pictures illustrative of the widespread extent of the operations of The Seaman, Kent Company, Limited, of Toronto, manufacturers of Beaver Brand Hardwood Flooring.

This enterprising company has five plants, two at Meaford, Ont., one at Midland, Ont., one at Ste. Agathe, Que., and one at West Lorne, Ont., the latter plant being a new addition which will be operated exclusively on oak. The kiln capacity of the five plants will equal 986,000 feet, giving a flooring production of 2,250,000 feet of maple, beech and birch and plain and quarter cut oak per month.

The lumber used in the manufacture of Beaver Brand hardwood flooring is first air dried and then subjected to 160 to 200 degrees F. for 12 to 15 days in kilns specially built for the drying of lumber for hardwood flooring purposes.

Four grades of maple, beech and birch hardwood flooring are manufactured: Selected for color, Clear, No. 1 and No. 2 or Factory, while in oak three grades are produced—Clear, No. 1 and No. 2 or Factory. In private dwellings 3/8" in. flooring is especially used, while in stores and public buildings 13/16 in. is the favorite. In warehouses, factories and similar buildings 1-1/8 in. maple is frequently used.

In Toronto, Montreal and Winnipeg the company carries, in specially constructed warehouses, large assorted stocks of Beaver Brand hardwood flooring.

The Seaman, Kent Company, Limited, arranged with the Pathe-scope Company of Toronto to make a complete series of moving pictures of the manufacturing of hardwood flooring from the felling of the tree to the laying of the finished product, depicting among the final scenes the beauty of hardwood floors and the enjoyment offered by a happy company lightly tripping over its polished surface. To complete this picture it was necessary to use one thousand feet of film which admirably tells the story of the manufacturing of Beaver Brand flooring and is a most instructive revelation of one of the leading industries of Canada.

The Company has purchased a number of these films and they are being shown in all the leading theatres from Halifax to Vancouver and, in time, will be displayed overseas. The factories, however, are so busy supplying the local demand that it is impossible at the present time to undertake anything in the way of filling orders for export.

The moving picture machine used at the convention in Hamilton has been purchased by the Seaman, Kent Company, Limited, along with the film, and is at the disposal of any of the Ontario lumber dealers who desire to show their customers how and where Beaver Brand hardwood flooring, which they sell, is manufactured.

The film, while showing the manufacturing of Beaver Brand hardwood flooring, was produced largely for instructive purposes for the name of the company appears only twice in the entire series of scenes. As depicting, however, a great national activity, the views have given much pleasure and have been enthusiastically received.

Mr. Frank Kent, managing director of the company, was present and expressed his pleasure in meeting so representative a gathering

of Ontario lumbermen and spoke appreciatively of the usefulness and good work of the Association.

The entertainment features at the convention were arranged by the Sales Department of the company and Mr. D. M. Heise, the Ontario representative, looked after the details in an admirable manner. Jules Brazil, of Toronto, the widely-known entertainer, presided at the piano, and led the jolly lumbermen in a number of tuneful melodies and popular choruses, while the Walsh Sisters of Toronto, contributed several well-rendered songs and duets and were cordially greeted.

The retailers declared that the entertainment was one of the most novel and well planned of any they have had the pleasure of attending.

The "Little Giant" Does Great Work

The demonstration given in front of the hotel by the "Little Giant" tractor, in which Guy H. Long, of Hamilton, is much interested, aroused considerable interest. The "Little Giant" has been used by the Long Lumber Co. and is a powerful machine. Its pulling capacity is gauged at eight tons, and the tractor has never balked even at that. The motor used is of the Ford make.

Recently a load of lumber weighing 13,380 lbs., was hauled around the city by this sturdy outfit. A Ford truck with worm drill

Royal Connaught Hotel, Hamilton, where Convention was held

is operated by a 22 horse power motor. The tread of the tractor is 45 inches and the wheel base 70 inches.

The advantage claimed for the "Little Giant" is that it will considerably reduce the cost of hauling, will handle material of any description rapidly, and do the work of, at least, three teams. There is nothing cumbersome about the machine, and many lumbermen wondered where and how this auto tractor gets its power to drag around such large loads.

The men behind the invention are D. L. McIntyre, manager of the Ellis-Moore Motor Co., and Guy H. Long, and a patent for the units has been applied for.

New Director is Live Wire Member

F. E. Hollingsworth, who was recently elected a director of the Ontario Retail Lumber Dealers' Association, is one of the most enthusiastic and alert members of that body. He hails from Sault Ste. Marie, Ont., and has spent all his life in the lumber game. Born in Montreal his parents came to Ontario to reside when he was very young and the subject of this reference spent the greater portion of his youth with his grandfather, W. D. Fremlin of Marksville, St. Joseph's Island, who handles large quantities of cedar ties, posts, piling, etc. There Mr. Hollingsworth gained his first love for wood products, and when 17 years of age he took a position with the

Lock City Mfg. Co., Sault Ste Marie, Mich., as book-keeper. Two years later he was made manager, which post he continued to fill until 1915, when he formed a partnership with T. A. Corrigan of the Corrigan Lumber & Mill Co., Sault Ste. Marie, Ont. They have built up a large business in the retail lumber line, and operate a planing mill, and sash and door factory. Mr. Corrigan looks after the manufacturing end and Mr. Hollingsworth, the executive and sales end. He is a son of Ed. Hollingsworth, Immigration Officer at the Soo, and has developed some splendid ideas in regard to advertising and merchandising methods in the retail lumber yard, which the "Canada Lumberman" hopes to be able to present at some length in a future issue. Mr. Hollingsworth reports that business at Sault Ste. Marie for the coming season is exceptionally good in spite of the high prices and the growing scarcity of lumber.

Those Present at the Convention

The following retail dealers registered during the convention in Hamilton, and the majority of them attended the sessions on both days:—

Armstrong, M. H., Nicholson Lumber Company, Burlington.
 Bailey, A. & W. J. Bailey, Hagersville.
 Bailey, W. J., A. & W. J. Bailey, Jarvis.
 Baird, D. C., St. Marys.
 Barrett, E. M., Barrett Bros., Ottawa.
 Belton, Geo. H., Geo. H. Belton Lumber Company, London.
 Bond, J. S., Batts Limited, Toronto.
 Bond, T. G., Batts Limited, Toronto.
 Bowden, A., F. A. Bowden & Sons, Toronto.
 Bowden, V., F. A. Bowden & Sons, Limited, Toronto.
 Bowman, J. H., Dundas.
 Brennen, H., Dominion Lumber & Coal Company, Hamilton.
 Bryan, F. W., Bryan Manufacturing Company, Collingwood.
 Carew, F. J., The John Carey Lumber Company, Limited, Lindsay.
 Carson, W. H., Marlatt & Armstrong Company, Limited, Oakville.
 Carnell, John, John Carnell, Otterville.
 Clarke, B. F., McPherson & Clarke, Glencoe.
 Cluff, J. J., N. Cluff & Sons, Seaforth.
 Coates, C. L., A. Coates & Sons, Burlington.
 Cole, W. T., Seaman, Kent Company, Limited, Toronto.
 Cole, Matthew, Cole Lumber Company, Hamilton.
 Comstock, M., McClellan & Company, Limited, Bowmanville.
 Cooper, D. G., Collingwood.
 Cowper, M., Thamesford.
 Crosthwaite, H., Patterson & Crosthwaite, Hamilton.
 Davidson, G. P., Jas. Davidson's Sons, Ottawa.
 Davis, M. E., McAuliffe Davis Lumber Company, Ottawa.
 De Laplante, A., Beaver Lumber Company, Hamilton.
 De Laplante, C., Beaver Lumber Company, Hamilton.
 Dick, Alexander, Alf. McDonald Lumber Company, Peterboro.
 Dixon, R., Grand Valley.
 Eaton, M. H., Seaman Eaton Company, Toronto.
 Elliott, J., D. Aitchison Company, Hamilton.
 Emery, W. B., Marlatt & Armstrong, Oakville.
 Emmonds, A. C., Mickle Dymont & Son, Brantford.
 Free, James, Mimico.
 Gardiner, J. E., P. W. Gardiner & Son, Galt.
 Gardiner, W. C., Builders' Moulding Company, Limited, Toronto.
 Gilchrist, Jas. T., Jas. T. Gilchrist Lumber Company, Toronto.
 Gilchrist, Jno. C., Jno. C. Gilchrist Lumber Company, Toronto.
 Gilchrist, R. S., The Boake Manufacturing Company, Toronto.
 Gillies, James, Jas. Gillies & Son, Preston.
 Gleave, P., D. Aitchison Company, Hamilton.
 Gorvett, W. G., Arthur.
 Hadley, W. A., S. Hadley Lumber Company, Chatham.
 Harriman, J., Niagara Falls.
 Harrison, James, Guelph Lumber Company, Guelph.
 Hatch, E. S., St. Thomas.
 Hazen, Harry, Tillsonburg.
 Heise, D. M., The Seaman, Kent Company, Stouffville.
 Hollingsworth, F. E., Corrigan Lbr. & Mill Co., Sault Ste. Marie.
 Houston, G. W., Houston Company, Limited, Tweed.
 Houston, J. F., Houston Company, Limited, Tweed.
 Hubbell, C., Thamesville.
 Ingleby, C. E., Ingleby-Taylor Company, Brantford.
 Irvin, J. C., Irvin Lumber Company, Weston.
 Irvin, W. C., Irvin Lumber Company, Toronto.
 James, John T., Bridgeburg.
 Jull, H. A., Ingleby-Taylor Company, Limited, Brantford.
 Kernohan, Geo. N., Geo. N. Kernohan Lumber Company, London.
 Laidlaw, Walter C., R. Laidlaw Lumber Company, Toronto.
 Laking, W., Riverdale Lumber Company, Toronto.
 Lawson, Chas. C., The Alliance Lumber Company, Hamilton.
 Lee, Geo. E., Taylor & Wells, Paris.
 Leggatt, S. S., D. Aitchison & Company, Hamilton.
 Long, Guy H., Consumers Lumber Company, Hamilton.
 Ludlam, H. S., Ludlam-Ainslie Lumber Company, Leamington.
 Mackenzie, J. B., Georgetown.
 MacDonald, A. C., P. W. Gardiner & Sons, Galt.
 Macabe, C., St. Clair Construction Company, Limited, Toronto.
 McDonald, H. A., Barton Lumber & Supply Company, Hamilton.
 McGibbon, J., McGibbon Limited, Sarnia.
 McMurray, T. E., Builders Moulding Co., Ltd., Toronto.
 McPherson, G. D., Merlin.
 Markle, W. J., Boake Manufacturing Company, Toronto.
 Matthews, J. A., Orangeville.
 Menzies, A., J. H. Bowman Lumber Company, Dundas.
 Merkley, A. W., Merkley & Menzies, Milton.
 Milmine, A. B., Stoney Creek.

Murphy, George, Eugene Murphy, Mount Forest.
 Paterson, T. A., Mickle, Dymont & Son, Toronto.
 Patterson, Thos., Patterson & Crosthwaite, Hamilton.
 Penwarden, E. O., Green Lumber Company, St. Thomas.
 Press, R. J., The Alliance Lumber Company, Hamilton.
 Rastall, R. A., W. Rastall Lumber Company, Limited, Toronto.
 Reid, J. B. Reid & Company, Toronto.
 Rhind, A., Simpson Planing Mills, Toronto.
 Richardson, Fred, Ingersoll.
 Richards, L. H., R. Laidlaw Lumber Company, Sarnia.
 Robertson, C. R., W. C. Edwards & Company, Limited, Ottawa.
 Rose, A. G., Jas. Davidson's Sons, Ottawa.
 Roussell, T. J., T. J. Roussell & Son, Hamilton.
 Rutherford, J. H., Cole Lumber Co., Hamilton.
 Sage, F. W., Dominion Lumber Company, Hamilton.
 Sanders, A. R., Sanders & Bell, Limited, St. Thomas.
 Savage, W. E. S., Mimico.
 Saunders, W., Dutton.
 Scofield, J. C., Windsor Lumber Company, Windsor.
 Shirton, K. J., The Wm. Shirton Company, Limited, Dunnville.
 Smith, C. M., Aylmer.
 Smith, D. G., John B. Smith & Sons, Ltd., Toronto.
 Smith, Ed. S., Dominion Lumber & Coal Co., Ltd., Hamilton.
 Sparling, James, Meaford.
 Streight, J. E. L., J. E. L. Streight, Islington.
 Swan, H. A. L., Ottawa Lumbermen's Credit Bureau, Ottawa.
 Taylor, C. H., Dominion Lumber Company, Hamilton.
 Taylor, E., Taylor & Wells, Paris.
 Taylor, Fred, Hamilton.
 Tennant, W. B., John B. Smith & Sons, Limited, Toronto.
 Thompson, F., W. F., Petry, Toronto.
 Thompson, R. A., Thompson & Thompson, Atwood.
 Thomson, W. H., Thompson Bros., Port Credit.
 Tupling, W. M., J. R. Eaton & Sons, Limited, Orillia.
 Van Blaricom, G. B., "Canada Lumberman," Toronto.
 Wallace, J. T., Dymont Baker Lumber Company, London.
 Warwick, T. C., Blenheim.
 Watt, John, Watt Milling Company, Toronto.
 West, Wm., West & Jackson, Tillsonburg.
 Wiggans, R. G., Geo. M. Mason, Limited, Ottawa.
 Winlaw, R., The Winlaw Company, Ingersoll.
 Zimmerman, H., Streetsville.
 Zimmerman, M. B., Consumers Lumber Company, Hamilton.

Gore Park—A beauty spot and breathing space in heart of Hamilton's Business District

British Stocks Will Not Be Sold Here

A rumor has been heard in some quarters that the British Government was willing to sell that portion of its stock of lumber remaining in the Dominion to a syndicate to be marketed in Canada. S. G. Denman, of Montreal, when seen in reference to the matter, stated officially that it was the intention of the British Government to export to the United Kingdom all their overlying stocks now held in Eastern Canada, and that there was absolutely no truth in the report that these goods were to be disposed of locally.

Mr. Denman is of the opinion that the rumor arose from the report that the French Government stock, consisting of about 50,000,000 feet b.m., is being thrown on the market in Eastern Canada.

Alaskan Lumber for Australian Market

It is reported in the press that a firm in Sydney, Australia, has entered into a contract with a lumber concern in Alaska for the supply of 59,000,000 feet of lumber.

The contract is stated to give the buyers the option of extending the order to 90,000,000 feet, and stipulates that 80 per cent. of the lumber must be spruce and 20 per cent. hemlock. It is anticipated that difficulty will be experienced in securing tonnage to transport the lumber to Australia, as it is roughly estimated that fifty-nine vessels, each carrying 1,000,000 feet of lumber, will be required.

All the World Badly off for Houses

General Survey of Domiciling Needs in Europe Shows the Urgent Call for Dwellings

Shortage of houses prevails in towns as remote from each other as Bagdad and Bombay, Paris and Port Elizabeth. In Great Britain two housing Acts have passed through Parliament, the second of which only became law at the end of last December. It authorized the granting of a subsidy to private builders that will average £150 (\$750) per house, in order to stimulate private building. Such houses have to comply with conditions laid down by the British Minister of Health.

France is worse off than England as regards housing, owing to the occupation of Northern France by the Germans during the war. It was stated by the Minister of Liberated Territories that over 550,000 houses were made uninhabitable, and have to be reconstructed. Moreover, in districts that did not suffer in the war, overcrowding prevails and the health conditions are deplorable. In many parts of France employers cannot restart their industrial concerns because of lack of houses. There are few signs of building, either by the Government or by building organizations. The Government had to content itself by passing a law for the purpose of suppressing both collective and individual speculation in rents.

In Germany, the problem was acute before the war, and difficulties have been increased since the armistice, owing to the abnormal number of German marriages specially in Greater Berlin. Building proceeds slowly, owing to difficulties of coal supply, labor and transport. In Munich recently the director of the housing office stated that he had received applications for 70,917 houses, whereas, there were only 23 houses available. In Berlin, temporary huts have had to be put up.

In Switzerland the shortage is also acute, especially in Geneva and Berne. Special regulations have been passed by the Federal Council to allow tenants to remain in their houses, even if the lease has expired, provided they cannot obtain other accommodation. In addition, over two million dollars have been turned over to the local authorities in places where the housing shortage is most serious, for providing relief.

In Italy, it is expected that building operations, which have been started, will cost at least \$50,000,000, and the Minister of Industry has arranged for an annual State grant to be given to building organizations to stimulate them to activity. Recent Italian legislation has been framed with some cunning. The Government has agreed that all houses built before April, 1924, will be exempt from building taxes and super-taxes for six years, and that, for four years after this, the builders will be required to pay only half the normal amount in such taxes. If any builder begins a house before January 5 of this year, and finishes it before the end of 1921, he will be exempt from all taxes and super-taxes for the next 10 years.

In Norway, despite the extent to which wooden houses are used, there is still a shortage of 18,000 houses, but the problem is largely a financial one. Government funds are now assisting local authorities to build. In Sweden, the extreme Socialists have agitated for the rationing of housing accommodation, but the Swedish Social Board have maintained that such measures would encroach on the privacy of domestic life. As a result of meetings of a committee of experts in Sweden, it was urged that the State should provide dwellings for Government Employees, and that Government lottery bond loans should be instituted to obtain money for housing.

Logging Conditions Have Been Ideal

Murray-Crawford, Limited, of Campbellville, Ont., expect to cut this season about three quarters of a million feet of lumber largely hardwood, consisting of maple, beech, elm, basswood, etc. This will be sawn into lumber, timber, switch ties, and track ties. Conditions for logging have been very favorable with the exception that experienced woodmen are scarce. The weather has been perfect with plenty of snow. The market outlook, the firm report is encouraging and the demand heavy while prices have a tendency to advance. The Murray-Crawford mill at Campbellville in Halton county has been running steadily since January and the firm expect to operate it steadily throughout the spring and summer.

Mr. Atkinson as Consulting Engineer

W. F. V. Atkinson of Sault Ste. Marie, Ont., who for the past eight years has been chief forester, superintendent of water powers and stream flow, and manager of the natural resources for the Spanish River Pulp & Paper Mills, Limited, recently resigned his position and has opened an office at 486 Queen St., Sault Ste. Marie, as consulting engineer of forestry and water power. He is well and worthily known in the lumber and pulpwood industries of the Do-

minion, and has had an extensive acquaintance with them in their varied activities. Mr. Atkinson is a practical lumberman from the bush to the finished product, and has always taken a deep interest in the welfare and prosperity of the Canadian Forestry Association and allied organizations. He has had a wide and thorough insight into woodlands and water powers, both in the matter of inspections and detailed reports, and has successfully carried out similar work in connection with stream flow control and other important undertakings.

Hall Caine's Son After Pulp Wood

G. R. Hall Caine of London, England, son of Sir Hall Caine, arrived recently in Canada, on the steamer Empress of France. He comes in the interests of a group of seven of the largest newspapers in England, and is here to obtain a supply of wood pulp for the English newspapers.

He said it is his intention to obtain, if possible, a block of properties for the cutting of pulp wood, and also to arrange for the purchase of the wood for shipment to England, where it will be manufactured into paper.

Personal Paragraphs of Interest

Raymond S. Cooper hardwood lumber merchant, Saginaw, Mich., was in Toronto recently, calling upon the members of the trade.

R. P. Blair, formerly with the Hughson Company, Albany, New York, has joined Blair and Rolland, Montreal.

J. I. Bennett, of the Bennett Lumber Company, Montreal, exporters, is now on a visit to England.

George R. Gray, of Sault Ste. Marie, Ont., and wife, recently left on a trip to the South. Mr. Gray is the superintendent of the woods department of the Spanish River Pulp and Paper Mills.

John B. Reid, of Toronto, President of the Ontario Retail Lumber Dealers' Association, and Mrs. Reid, are spending a holiday at Atlantic City.

Duncan McLaren, President of the Union Lumber Co., Toronto, has purchased the handsome home of W. W. Beardmore, at 297 Russell Hill Road, Toronto.

A. E. Richards, of Prince Rupert, who is the northern British Columbia representative of Terry & Gordon, Limited, Toronto, is spending a few weeks in the east on business.

Duncan W. Fraser, managing director of the Montreal Locomotive Works, Limited, has been appointed vice-president, in charge of sales, of the American Locomotive Company.

G. H. Bulgrin, representing the Canadian Puget Sound Lumber and Timber Co., Limited, Victoria, B. C., with head office in Marshfield, Wis., was in Toronto recently on a business visit.

John Wilson, a well-known lumber dealer of Kinmount, Ont., dropped dead while watching a hockey game recently at Fenelon Falls. He had been suffering from heart weakness for some time. The late Mr. Wilson was fifty-five years of age and, in addition to dealing in lumber, was also an extensive buyer of cattle.

At the recent convocation of the Grand Chapter of Royal Arch Masons of Canada, held in Toronto, R. Ex. Com. R. H. Spencer, of Trenton, was re-elected Grand J. Mr. Spencer is widely known in the lumber arena as well as in Masonic ranks, having for many years been associated with Gill & Fortune, of Trenton, who conduct one of the most progressive retail lumber yards in Eastern Ontario.

Dr. A. C. Duncome lately passed away at Waterford, Ont., in his eighty-third year. He had not been in good health for some time and the end came practically as a result of old age. He had been identified with the business interests of Waterford ever since its incorporation and for a long period was engaged in the lumbering line and conducted a sawmill with success. He was an ex-member of the town council and ex-Reeve of Waterford.

Daniel E. Parker, manager of the Main Belting Company of Canada, of Montreal, is on a business trip to the Coast. He will visit all the principal cities on his way to the Coast, and will probably spend another two weeks visiting B. C. and Victoria, after which he will return to Montreal by way of St. Paul, Chicago, Seattle and Portland, Oregon. Mr. Parker will visit the Winnipeg branch office, 567 Banning Street, in charge of Mr. Hicks, and also the branch offices in Calgary and Edmonton.

An envelope may be made good use of as an advertising medium. By displaying snappy, up-to-the-minute slogans and information on the back of envelopes, you can impress your message on some people you would otherwise miss.

Directing Force of the Laurentide Co.

George Chahoon, New President of Canadian Pulp and Paper Association, Was Born to the Craft

George Chahoon, Grand Mere, Que.
Pres., Laurentide Co., Limited

George H. Chahoon, Jr., who was recently elected President of the Canadian Pulp and Paper Association at the annual conclave held in Montreal, is also the President and General Manager of the Laurentide Company, Grand Mere, Que. He has been with that progressive organization for a score of years and when Sir William Van Horne passed away, Mr. Chahoon succeeded him as "the head." He is quiet, forceful and efficient and one of his outstanding characteristics is his desire and ability to secure co-operation. This has extended to the whole industry and to Mr. Chahoon's broad vision is due much of the progress in conservation and reproduction of Canadian forests, particularly in the East.

George H. Chahoon, Jr., comes naturally by his pulp and paper skill. He is the son of George H. Chahoon, a one-time Senator of New York State, who in Ausable Forks was connected with one of the first sulphite mills in America. The lad went from his birthplace there to Glen Falls, where the International Paper Co. operates some of its mills, part of the largest group of newsprint mills in the whole world. The boy worked up through the mills, and at about 25 years of age became superintendent in charge of the Northern New York mills and then came to Grand Mere, Que.

At this time Laurentide, as has been said of all the industry, was in a "poor, sickly, anaemic condition." It was only four years since it had installed newsprint machines, and as the United States market was closed through a high tariff, exports had to be made to England at different prices. Three new machines were soon installed, however, and the new general manager started on the upbuilding process in Laurentide which has attained such marked success. From a mill man he became an organizer and an executive head, and gradually built up around him local expert paper makers, and proved an adept in the control of labor.

Gradually, too, his ideas in a model town took shape, and Grand Mere emerged from a typical Western mining camp of tar paper shacks, and this transformation is his chief pride to-day.

In the big plant itself he has succeeded in working up to an average of 90 per cent. efficiency, where a textile mill, for instance, runs about 60 to 65 per cent. In his fine paper, "The Digester," he prints in French and English the records of the various machines, month by month, with the names of the men who run them. The Laurentide Co. recently closed with the New York Times the largest newsprint contract ever consummated in the history of the industry. It was for 40,000 tons a year for five years or 200,000 tons in all, at a figure which will probably average \$90, or \$18,000,000 in all.

The title of "Col." recently employed by an American visitor when referring to Mr. Chahoon was a surprise to most of his Canadian friends. This was for his services in the war, bestowed when he accepted the position of business manager on the department in charge of the manufacture of gas shells, poison gases, etc., at the Edgewood Arsenal at Baltimore, Md.

Mr. Chahoon is one of the most popular as well as most respected men in the pulp and paper industry in Canada, popular, perhaps, as much as anything because he is essentially human. He will stand beside a window of the office at Grand Mere, discuss with concentrated interest a \$2,000,000 proposition, and break off to make a remark about someone who has passed, and in a flash is at the big task again. Perhaps because there is an attractive modesty about him. When the death of Sir William Van Horne opened the presidency of Laurentide, he insisted that Charles R. Hosmer should be appointed. The latter, of generous mind, refused on the ground that the man who "made" the company should hold this honor. And so it was, and to-day behind the skilled captain of industry of Grand Mere stands the equally skilled financier of 4 Hospital Street, Montreal.

Veteran Sheriff is Former Lumberman

The sole surviving member of the first Parliament of Canada after Confederation is Sheriff Hagar of Plantagenet, Ont., who is now in his ninety-fourth year. He resides in the same dwelling to-day as was occupied by his father on the bank of the South Nelson river in Prescott County. His father was Abner Hagar, an American from Vermont, who settled on some bush land that he purchased in Prescott county. He cleared the property on the banks of the river, built a sawmill, and conducted a successful lumbering business there for many years. That section was one of the most prolific sources of white pine in the Dominion. Sheriff Hagar is fond of telling of the early days of Plantagenet, when gangs of river drivers came down the South Nation river, bent on indulging in carousals after pay day, when whiskey was cheap and plentiful—and the chief diversions were free-for-all fights. Lumbering in that era was in its infancy, comparatively speaking, and the bush in that part of the province was long ago cleared away. Now little remains to testify to it being at one time the richest section of white pine logs in the Dominion. When material for his sawmill was exhausted many years ago Sheriff Hagar looked around for some other occupation and has been devoting his time to breeding horses, cows and sheep with marked success, carrying off many prizes for high-class stock at county fairs. Although he stood for parliament in Prescott county six times the Sheriff was defeated only once. He is a Liberal in politics and has occupied his present office as Sheriff for the last thirty years. He attributes his grand old age to three things—moderate exercise, fresh air and plain food. A distinct honor was conferred on Mr. Hagar recently in the shape of a request that he grace the opening of the present parliament which assembled recently in the new buildings at Ottawa. The Sheriff still enjoys good health and reads the newspapers with the greatest of enjoyment.

Orillia Firm Adopts Group Insurance

J. R. Eaton & Sons, of Orillia, Ont., recently adopted the group insurance plan so far as their employees are concerned and this step on the part of the firm has met with much appreciation. Every employee, who has been with the company for a period of three months and up, is insured for an amount ranging all the way from \$500 to \$3,000, varying according to length of service. One employee has been engaged for thirty-three years and two others for over a quarter of a century, while a number have been with the company for ten years or more.

J. R. Eaton & Sons, who are widely known both in the lumbering and woodworking line, have several large contracts on hand for the interior fittings of a number of public buildings, warehouses and other structures. About one hundred and forty hands are employed in the plant at the present time.

Fine New Sawmill for Timmins

A new \$50,000 sawmill will be erected in the spring near Timmins by the Ontario Tie, Timber and Construction Company. Machinery for the plant has already been ordered. It will be one of the finest sawmills in the north and will be erected on the old Heltstrom farm. This lumber company which was formerly Bourke, Lindsay and McCluskey, is doing an immense business and one item alone of the winter output will be 600,000 ties. They have recently taken over a timber limit up the river from Timmins.

Made of the Oak from King's Forest

A magnificent new Speaker's chair and a table for the clerk and his assistants, made of oak from the King's Forest, will adorn the new House of Commons, Ottawa.

Hon. E. N. Rhodes, Speaker of the House, said that he was approached some time ago by Percy Hurd, the well-known English journalist, the member of the British Parliament, with a view to a presentation by the members of the Mother of Parliaments of a new Speaker's chair and table to the House of Commons in Ottawa.

"The money is being raised by private subscription," said Mr. Speaker, "and the oak will be taken from the King's Forest. The table of the house will arrive in a few months' time. It will be a handsome piece of furniture in keeping with the dignity of the new Chamber. The Speaker's chair may not be completed for a year or more, as I have to decide whether a replica of the one at Westminster will be the right size for the Canadian Chamber. I intend to consult with John A. Pearson, the architect, as to the dimensions and design of the new chair. My idea is to place the chair on the throne and leave it there for all time, so that traditions may grow around it."

New Director is Busy Sawmiller

Rufus E. Dickie of Nova Scotia Conducts Large Operation
and is on C. L. A. Executive Board

Rufus E. Dickie, Stewiacke, N. S.

Rufus E. Dickie of Stewiacke, N. S., one of the newly-elected directors of the Canadian Lumbermen's Association for the Maritime Provinces, is an enthusiastic young lumberman, who is rapidly making his way to the front. Mr. Dickie attended the recent convention in Quebec City and took an active interest in the proceedings. Brought up in the lumber business, his father, Alfred Dickie, operated quite extensively and, when not attending school, the subject of this reference worked in different branches of the industry and became well acquainted with all the details. He was graduated in 1907 from Dalhousie College with the degree of Bachelor of Arts and soon after was given the complete charge of the Alfred Dickie Lumber Company's operation at Stewiacke. In that year the firm cut and shipped 10,000,000 ft. He stayed with this organization for two years and then started out on his own hook and has since been doing business for himself. For four years he operated a property at Tangier, Halifax county, and in 1914 came back to Stewiacke, where he has been conducting affairs ever since.

Mr. Dickie owns and controls from 25,000,000 ft. 30,000,000 ft. of standing timber, mostly spruce. His business is wholly manufacturing and this year he will have a cut of about 12,000,000 superficial feet, consisting of spruce, pine, hemlock and birch. His stationary mill is at Dickie's Mill Siding, about a mile and a half on the Truro side of Stewiacke. The equipment consists of two rotaries, right and left-hand; lath machine, band re-saw and planers. This mill runs only in the summer time. Besides this, Mr. Dickie has four portable mills, which run all winter and part of the summer. In addition, he owns a dressing plant at Stewiacke Station, the machinery consisting of two four-sided planers and matchers, one 6 in. band re-saw, and inside moulder and power-feed rip-saw.

Connected with this dressing mill is the power plant of the Stewiacke Electric Light & Power Co., which provides illumination for the towns of Stewiacke, Shubenacadie and Milford. Mr. Dickie is also the sole owner of the light and power plant.

In regard to standing timber, Mr. Dickie says he has been able to buy sufficient each year to keep his mills going. The capacity of his stationary mill is about 75,000 ft. per day. The shipping facilities are excellent, being on the main-line of the C.N.R., and near Halifax, and as a consequence he is not troubled with any car shortage. The storage ground at this mill will hold about 7,000,000 ft. The machinery is principally Oxford foundry. The re-saw is a No. 341 Yates, while the planer and matcher is also a Yates. The planers in the dressing mill at Stewiacke Station are one S. A. Woods and the other McGregor-Gourlay, while the re-saw is a No. 341 Yates.

The portable mills of Mr. Dickie consist mostly of Oxford foundry equipment, using Robb Engineering Co. boilers and engines. Two mills are equipped with 85 horse power boilers and 65 horse power engines. The third has a 65 horse power boiler, and 50 horse power engine, while the fourth has a 55 horse power boiler and a 45 horse-power engine. Three of the portables are located this winter near Stewiacke and the lumber from them comes into that station, while the fourth is operating near Enfield, Hants County.

Lumbermen Oppose Eight Hour Day

The B. C. government was recently waited upon by a deputation of representative lumbermen who protested against the passing of an eight-hour day bill introduced in the Legislature recently by Major Burde.

E. C. Knight, of Vancouver, read a lengthy resolution passed by industrial and manufacturing organizations and said a federal commission was now gathering information leading to the enactment of restrictive legislation governing working hours of labor. Until this work was finished it was requested that no legislative body in Canada pass legislation in this connection. The deputation pointed out in the lumbering industry the work was "seasonable" and it was impossible to regulate the hours of labor to suit all parts of the

Dominion with one law. Mr. Knight explained that labor in all the provincial mills was consulted and working hours regulated at conferences between employers and employees. He pointed out the heavy competition from Eastern Canada and the United States and asked that the B. C. Legislature take no steps towards passing the Burde amendment for the time being.

Premier Oliver said nothing definite could be stated at the present time and until the executive had had time to investigate the matter no action could be taken. He promised careful consideration of the representations.

Abitibi Plant Operating to Capacity

The Abitibi Power & Paper Company is again operating at full capacity, at Iroquois Falls, Ont., having repaired the broken middle dam. According to figures covering the early part of February, the plant has established a new high record in producing 255½ tons of newsprint in 24 hours. It is stated that during the first week of February the output amounted to 1,484 tons of newsprint, the average not being far below the highest day's record, which was established on Feb. 4.

Taking into account the large volume of orders booked ahead, the reasonably adequate supply of workmen, and the high degree of co-operation between the company and the employees, it is reasonable to expect that the year 1920 will probably far exceed the output during any previous year in the history of the enterprise.

Will Push Production to Maximum

A recent despatch from Meaford, Ont., says that an amicable settlement has been effected between the employees of the Seaman, Kent Co. and the company. The men agreed to accept time and a quarter for extra time over nine hours for five days a week, and time and a half for Saturday afternoons, for a period of one month, during which time arrangements will be made for operating a night shift with the view to eliminating overtime during the day. The bonus which the company has been paying will be discontinued and a straight advance of 10 per cent. in wages is to be made in its place. The very best spirit of "get-together" was shown on both sides.

The company will spare no effort to push production to its maximum, firmly believing that increased production is one means by which adverse exchange can be remedied and the high cost of living ultimately reduced.

The North Wants More Railways

A deputation of Parry Sound residents recently asked the Ontario Government to extend the Timiskaming & Northern Ontario Railway from North Bay to Parry Sound. Premier Drury, Hon. Peter Smith and Hon. Beniah Bowman heard the deputation. It was argued that there were 42 townships in that district which have no railroad running through them. The deputation saw advantages in having Parry Sound harbor connected up with the North country. They also requested a trunk road from Parry Sound to Burk's Falls to connect with the Sault and Toronto road.

Premier Drury promised consideration, but stated that he desired to go slow in expenditures for a year or so. Later he thought a dollar would buy 30 or 40 cents worth more than it did at present.

Big Operations at Massett Island

Lumbering on an extensive scale is to be conducted on Massett Island, one of the Queen Charlottes, by the Massett Timber Co. (1919) Limited. This concern now has forty men at work in the limits, which cover over 150 square miles. Within a few weeks, it is expected to have between 700 and 800 men at work in the mill and in the woods. Thirty-two steam rigs are on the ground. Mr. F. L. Buckley, general manager of the company, stated recently that it was the intention to erect a paper manufacturing plant at Massett. A waterpower is now being developed with this in view, and a start will be made on the paper mill next year. The limits consist of spruce and hemlock only, there being no fir trees on the island. Lumber is being shipped to Cuba, Australia, England and sold on the local market.

British Order Nearly All Shipped

Over 57,000,000 feet of the British order of 70,000,000 feet has been shipped by British Columbia mills. Not a foot of timber has yet been lost on the long voyage to Great Britain. There is now a shortage for the government order of lumber. The Associated Exporters' office reports a healthy enquiry from China, Japan and England. Private shipments are to be loaded for Japan in the near future.

The fleet of forty wooden steamers built in British Columbia yards has carried approximately 40,000,000 feet of the British order.

More Efficiency and Better Spirit in Camps

How Fourfold Programme of the Y. M. C. A. as Applied to Industry is Working Out Among Lumberjacks of Middle West—Scope and Success of Work

—By M. R. B. Boyes, Winnipeg Industrial Secretary, Central West Division, Y. M. C. A.—

M. R. B. Boyes,
Winnipeg

"You going away!" exclaims one of the men—a foreigner.

"Yes," says the Y. M. C. A. Secretary.

"Me go to," replies the first speaker

Just one of the many little incidents in the life of an Industrial Secretary, Y. M. C. A., who is giving his whole time to the men employed in the woods to-day.

Who is the Secretary?

What does he do?

Why is he there?

About a year ago a secretary with pack on his back entered the woods to demonstrate to men and employers the four-fold programme of Y. M. C. A.,

as applied to industry and met with considerable success—so much so that to-day this programme is being carried on with the permission and support of seven of the largest lumber companies in the middle west.

With seven secretaries now at work in forty or more camps, reaching upwards of four thousand men, the Industrial Department of the Y. M. C. A. National Council is carrying out an effective programme in the lumber camps in Manitoba and Saskatchewan, making the leisure hours of the men more attractive, providing educational, physical, social and religious instructions and service.

The result of the work is already showing considerable progress and success, judging by the many reports received from the secretaries, men and employers. To-day the camps are rendered more habitable and pleasant and the men are showing a disposition to stay with their jobs rather than migrate to the cities as soon as their earnings would justify that move.

The plan adopted by the Y. M. C. A. is to supply a thoroughly trained secretary to each company, the expense of his services, equipment, etc., being entirely borne by the company.

The secretary remains in camp about a week, during which time he organizes the men and arranges for the continuation of the activities he has initiated. He then moves on and carries out the same programme in another camp which has been assigned to his care, returning in due time to the ones he has left.

Each secretary carries a large equipment comprising a phonograph and two hundred or more records, (instrumental, popular and sacred), portable organ, stereopticon and lectures; games, literature, mouth organ, boxing and sporting equipment, writing materials, etc.

Plans are also under consideration to supply moving pictures for the entertainment of the worker.

A Comprehensive Programme Outlined

Social—Music, sing songs, stunt nights, pictures, concerts, games.

Physical—Sports, games, contests, boxing, etc.

Educational—Reading, lectures, practical talks, safety first education, health education, vocational classes, first aid.

Religious—Sunday services, personal services. Bible classes, sacred music.

Canadianization (for foreigners)—English classes, national music and games; Citizenship.

Once the various activities are well under way, the men in each camp are organized so as to conduct their own programme during the absence of the "Y" man, who is on his way to another camp. The result has been that camp life has been put on an immeasurably higher plane. The men are contented and work better, and where the programme has been introduced a response in the way of greater production has always been observed.

The different lumber companies have been keenly interested in the movement and recognized from the outset the beneficial effects which would result. They co-operated in every way and the "Y" men have found their work greatly facilitated. All the activities at the present time are carried on in the bunk house for this is the only place open to us, but, in some instances, so enthusiastic have been the men that traditions and customs of the camp have been swept aside and the cook-house has been cleared in order that the Secretary could better carry on his work.

A proposal is now on foot to erect buildings to carry on the work in those camps where the number of the men employed is sufficiently large as to warrant it.

Space does not permit to mention every little detail of the Association work. Travel with me, and after leaving the railroad we hit the trail for the first camp, which may be six or sixty miles away. There may be a tote team waiting, if so everything is jake, if not, we put on our snowshoes and start with pack on back, carrying as much of our equipment as possible. Noon day arrives and you camp for lunch. Refreshed and rested you proceed, reaching camp late in the afternoon, and after making yourself acquainted with the foreman and the cook, (Don't forget the latter, he is a good man to know), you rest till supper is over, then repair to bunk house with gramophone, and very soon the men's voices are lifting off the roof to the tune of "I'm Forever Blowing Bubbles". The stereopticon is put into action and all gather round with lights out and pictures are thrown on the screen—say for instance, "A trip across Canada from Coast to Coast." Nine o'clock lights out and each retires to his bunk contented and happy, forgetting many of his worries and discomforts.

The men arise next morning in a different frame of mind and, after breakfast, you see them swinging along the trail with axe on shoulder to the place where they are cutting that day, whistling and singing, and throughout the day one may hear sounds of trees falling to the tune of Harry Lauder's "Roaming in the Gloaming."

Making Good Citizens of Foreigners

Another evening one may see a small crowd of foreigners (of which there are many) seated around the Secretary, who with his chart, books, actions, etc., is teaching them the English language, and also the laws, customs and ideals of this great Dominion of ours, that they, in time, may become a Canadian and good useful citizens. One secretary reports classes of over one hundred pupils.

Sunday evening is given up to religious services. Here you will find Protestants and Catholics, Jews and Gentiles singing with great gusto to the old familiar hymns, to be followed with a simple, yet forceful, gospel message.

That this work has come to stay is beyond doubt. In the near future the companies will not only recognize that a secretary in their camps is a necessity, but will provide a building for him to carry on.

Let me say a word of appreciation of the various camps. Everywhere the "Y" man is welcome with a glad hand, and every consideration is shown him for his comfort. They recognize that great returns are to be had from such an investment, and realize that to maintain good relationship between the management and the men, for the creation of a general feeling of content and happiness, a third party is necessary and the Young Men's Christian Association, with its programme, can supply the want.

After all, the Association's aim to install its programme into industry is not merely to provide entertainments of music, games, etc., or to chase away what would otherwise be dreary hours. Necessary though these activities are—for the work is hard and living conditions are not any too luxurious—the invasion of the association into industry is creating an atmosphere that tends to bring forces together on a man-to-man basis, as taught by the Master Himself. Christ stated a great industrial truth when he said "Man shall not live by bread alone."

The Force That Produces Results

When we have put all our physical strength and all our intelligence into our work whatever it may be, we have not yet reached the limit of our duty. We have still to put into it the most wonderful and the most powerful force of our Spirit.

I don't mean that we must get down on our knees and pray. Do that by all means if you want to, but a man can put his heart and soul into his work, just as effectually—generally more so—when he is standing at his lathe or chopping down trees in the bush.

People shy at such words as "Spirit." They seem to think that this sort of talk should be kept for Sunday sermons, but our spirit is just as definite a part of us as our ears, eyes, or brain.

It is the crowning possession we have and a force which produces practical results that often seem almost miraculous.

If there is a place which needs this force to-day it is the industrial world and the Young Men's Christian Association is out to create and stimulate an atmosphere that will develop the spirit, and if successful, it will do more to bring about practical efficiency and happy relations than anything else.

Car Problem in West is Serious One

Logs are Also Very Scarce and the Lumber Situation is Growing More Complicated

Writing to the "Canada Lumberman" on the situation in forest products in British Columbia, a leading Vancouver operator says: You have probably at some time in your career, stood with your mouth open, gazing at some complicated machine in operation. It is with such sentiments that I have been viewing the lumber game during the past few months. You will recall that when the mental faculties are co-ordinated in concentration upon any problem expression languishes,—such being the psychological explanation of my silence on the lumber situation—the silence of absorption.

To get a line on my department of trade and commerce, which is more or less world wide, one must remember the essential factors—production, markets and transportation. So far as the B. C. lumber conditions are concerned production still stands a little below normal—markets keep up an abnormally insistent demand and transportation continues on the blink—from which situation arises what you see and no doubt hear of, with much repetition and re-iteration. Meanwhile, while everyone howls patriotism in after-dinner speeches and public functions all and sundry—in private business operation each feels disposed to sell his product in the highest market regardless—which perhaps is after all the way of the world.

There is a growing feeling of uncertainty in business circles here which has been developing since the C. P. R. stopped an embargo on its equipment going across the line some three weeks ago. The reason is readily apparent—being in this wise. That to date the Canadian market, with all the howling for investigations, appeals to Board of Commerce, the Dominion Government and other more or less useless organizations, has not displayed any serious inclination to come through with what our old friend, Adam Smith, was wont to term "Effective Demand"—which, being interpreted in modern business parlance, means paying the price and absorbing the output. The upward movement has been practically constant. Prices of logs, which as you may know, are the raw material in the manufacture of lumber, stand now at \$20, \$25, and \$30 for No. 3, No. 2 and No. 1 grades respectively—with a further advance of \$5 on No. 1 making \$35 in prospect, all of which will undoubtedly be passed along to the good old standby—"ultimate consumers."

You will, no doubt, understand that there is a great difference between the lumber situation here and in the east. In Ontario and Quebec practically all of the mill men own their own timber—get out their own logs in the winter and saw them into lumber in the summer months. Here—on the contrary—this applies to the Coast region—the logging and sawmill branches of the industry are to a large extent separate and the majority of the mills are dependent upon the log supply, having to purchase their raw material in the open market.

Just now the log supply is below normal, owing to the fact that most of the loggers ceased operations at the holidays as per usual while the mills did not follow suit as per custom—thus bringing about a demand stronger than ordinary for a log supply which is entirely insufficient to meet the requirements of the situation. While most of the logging camps are now in operation, enough time has not elapsed for supply to overtake demand in this quarter and there is keen competition for every boom that shows in sight. As already noted, the C. P. R. a few weeks ago decided to refrain from allowing any more cars to go over the border, and, owing to the exchange situation, there has been a continually diminishing number of foreign (U.S.) cars coming to this side which may be loaded with a return cargo. If this situation continues it is hard to say what may happen.

Practically all the mills have a larger number of orders on their books for shipment to the U.S. and, if cars are not available, it may be there will be a decided change in the situation in the near future. Not being much of a prophet I do not pretend to make any forecasts. Many mill men are optimistic over the return to private ownership of the U. S. railroads, yet it appears evident that, so far as the immediate future is concerned, the car supply problem is going to be a serious one.

Activity in Nearly All Logging Camps

In its report of lumbering activities for the month of February, the Labor Gazette, of Ottawa, says: Lumbering operations in the Maritime Provinces continued steadily. Early in the month the majority of camps in New Brunswick about completed their cutting and started hauling to river banks. The value of the lumber yield in Nova Scotia for 1919 totalled \$19,000,000, or more than double the value of the previous annual yield. The probable lumber cut in New Brunswick is estimated at about 325 million feet, which will be a record cut. The snowfall in the middle of the month assisted opera-

tions. Halifax continued to supply men to the surrounding camps. Experienced men were in demand for the woods around New Glasgow, but later the camps were working to capacity, and were well supplied with men. At Sydney men were asked for, but few applied. Campbellton reported men being laid off early in the month, absence of snow making it impossible to haul logs to the rivers, but later the heavy snowfall increased activities. Bathurst reported the lumber shifting among the men. At Fredericton the lumbermen reported a good month in the woods, the lumber cut being a record, with sufficient help on hand. Quebec reported great activity in the surrounding camps, with snow sufficient for the work. Hauling was in full swing in the lumber camps at Sherbrooke. The sawmills were fairly active. At Ottawa and Hull renewed difficulties was reported in securing men for the woods, but the camps were busy. The lumber camps near Peterborough employed all available men, and the largest cut for years was looked for. The mills were being prepared for spring work. A shortage of experienced woodsmen was reported from Owen Sound. At Sault Ste. Marie lumbering operations were somewhat hampered owing to great depth of snow. Men were in demand at all times not only in log camps, but for cedar and pulpwood camps. The demand for woodsmen continued strong at Port Arthur and Fort William, a number of men arriving from Winnipeg and Toronto. The camps at Cameron Falls were comparatively free from labor troubles, but local disputes occurred where the One Big Union was strong. There was a strong demand for bush men, tie makers and cordwood cutters at Winnipeg for surrounding districts, the shortage being general throughout Manitoba, Saskatchewan and Alberta. At Fernie lumbering was very active, camps running with full crews, with some demand for sawyers, swamper and hookmen. At Nelson and Cranbrook operations were hampered for a time by want of snow, but great activity prevailed later. Vernon reported occasional shortage of help, the logging camps being busy. The lumber mills were quiet. At Kamloops the demand for labor slackened. Some camps were quarantined on account of smallpox. Prince Rupert showed increasing activity in the surrounding camps throughout the month. At Vancouver a demand for tie makers and stationmen was noted at the middle of the month. The saw and shingle mills were busy. New Westminster reported a busy month at the saw mills and shingle mills, which had orders enough to keep working at capacity for months. At Victoria the lumber and logging industries were very active. Loggers were in demand for new camps. Nanaimo reported activity in the logging camps, but little demand for lumbermen.

Not Neglecting the Home Market

"The criticism of the lumber interests, which appeared recently, stating that these interests are paying special attention to the export business and neglecting the British Columbia market, is unjustified," observed Mr. Hackett, of Messrs. Robertson & Hackett, Vancouver, B.C.

"As a matter of fact there is a very small demand right here in Vancouver—we are not doing a tenth of the business that we have done in the past, because there is very little building going on. This applies also to the prairies, although we can offer lots of lumber."

Asked if much lumber was being exported to the United States, Mr. Hackett replied: "A normal amount is being exported, but no greater quantity than last year."

Forestry Class Inspect Logging Camp

Through the courtesy of General Manager Johnson of the Capilano Timber Company, the forestry class of the S.C.R. had the opportunity recently of inspecting one of the most up-to-date logging camps on the coast. The Capilano Timber Company spends over \$18,000 a year for fire protection and has all up-to-date fire-fighting appliances and a trained force of fire-fighters. Since fire protection is one of the first tenets of forestry, this fact was of great interest, as showing the tendency of the up-to-date logger towards forestry methods.

Western Pulp Plant Changes Hands

The Western Canada Pulp & Paper Company, Limited, with head office in Toronto, has been granted incorporation. The new company, which is capitalized at \$1,000,000, was organized to take over from the bond holders in British Columbia, the Rainy River Pulp Mills, which plant is already being improved. The company will also acquire the McNeill timber tract in British Columbia. The president of the organization is Everley M. Davis of New York, and the Vice-President is H. J. Daly, of Toronto, with J. A. Kent of Toronto, secretary. Among the other directors are Robert Sweeney of New York, S. Casey Wood, barrister, Toronto, and A. H. Douglas of Vancouver.

How Percentage of Trade Applies

Instructive Report on Exports and Imports Showing the Trend of Canadian Business

An instructive report on the aggregate trade of Canada as worked out in percentages was presented at the recent annual convention of the Canadian Lumbermen's Association held in Quebec. The statement was prepared by Frank Hawkins, of Ottawa, Secretary of the C. L. A., and shows the tremendous expansion of business carried on by the Dominion.

The percentage of imports into Canada to aggregate exports has greatly increased so far as the United States is concerned and fallen off decidedly in recent years with respect to the United Kingdom.

The percentage of exports from Canada to aggregate exports remained about the same during the last decade so far as matters relate to the United Kingdom, but to the United States there has been a drop of nearly five per cent. during the past five years.

Canada's imports to gross trade have decreased about fourteen per cent. since 1914 and her exports to gross trade in that time gone up about the same proportion. The latter showing is not as favorable as desired in view of the depreciation in our currency and the people as a whole should endeavor to carry out in the making of the Dominion a far greater exporting country in order to overcome the present adverse rate of exchange and correct the balance of trade.

	1910 Year Including Coin & Bullion \$	1914 Year \$	March 31 to Sept. 30 1919 6 months Mdse. only \$
The aggregate trade of Canada in exports and imports is:—

Exports to Gross Trade	43.5	42.4	56.2

Prices Firm and Stocks Low in Montreal Market

Conditions in Montreal point to a continuance of very firm prices. Some wholesalers have once more advanced quotations, and judging from the replies received from the mills as to the new cut there is little chance of any backward movement. Some of the prices quoted are, it is asserted by certain wholesalers, far too high, but against this must be set the undoubted facts as to the exorbitant cost of manufacturing.

Lumber is still in very short supply, and generally speaking, stocks at anything like reasonable prices—that is, reasonable in the present condition of the market—are quickly bought up. With some wholesalers the question is "What lumber have you for sale?" not "What can I sell you?" This is not the time for hesitation in accepting offers—literally "He who hesitates is lost," so far as purchasing is concerned.

B. C. stocks are in fairly good demand, but comparatively little is being sent East.

Hardwoods are very difficult to secure, and prices are extremely high. In fact, more could be sold if it were available. Lath is very firm. According to one wholesaler, the chances are all in favor of this section holding up, even if more lath should come on to the market from mills tempted by the abnormal rise in this commodity.

The outlook for construction in Montreal this year is of the most promising character. Architects have a very large number of commissions, and although costs are high, there is every reason to believe that this will not deter building operations. The permits for the month of February totalled \$352,340, an increase of \$173,600; for the two months of the year the total is \$552,995, a gain of \$341,101.

The groundwood market is very strong, prices have risen considerably, owing to a large demand and small supplies. Sulphite is also firmer.

In pulpwood, pulp and paper exports, the last named continue to show chief gains. For the month of December last 46,747 cords of

pulpwood, valued at \$480,669, were shipped, compared with 72,468 cords, valued at \$748,364, in December 1918. In the nine months' period pulpwood exported was valued at \$6,802,209, compared with \$11,595,228 in 1918, a decrease of \$4,793,019.

British Columbia's Splendid Showing for 1919

The total value of the forest products of British Columbia for the year 1919 is placed at \$70,285,094, as against \$54,162,523 in 1918; \$43,300,469 in 1917, and \$33,528,000 in 1916, according to a statement issued recently by the Hon. T. D. Pattullo, Minister of Lands.

The largest increase is in shingles, which show a value of \$12,801,564 compared with \$5,805,417 in 1918. The value of the lumber cut is nearly \$5,000,000 more than the previous year, while pulp and paper shows a gain in excess of \$2,000,000.

Each item shows a considerable increase over the previous year, and the mining, railroad and general industrial development of the province is reflected in the gains made.

The following figures clearly show the estimated value of production, the most striking features being the fact that in three years the value exactly doubled.

Lumber—1916, \$21,075,000; 1917, \$28,225,000; 1918, \$26,219,697; 1919, \$31,000,000.

Pulp and paper—1916, \$3,520,000; 1917, \$6,835,034; 1918, \$10,517,250; 1919, \$12,554,257.

Shingles—1916, \$4,500,000; 1917, \$6,900,000; 1918, \$5,805,417; 1919, \$12,801,564.

Boxes—1916, \$1,833,000; 1917, \$1,611,880; 1918, \$1,845,195; 1919, \$2,142,000.

Piles and poles—1916, \$1,000,000; 1917, \$467,895; 1918, \$394,871; 1919, \$769,962.

Mining props and poles—1916, \$1,000,000; 1917, \$546,882; 1918, \$692,547; 1919, \$762,486.

Miscellaneous (cut by railroads, mines, etc.)—1916, \$1,150,000; 1917, \$1,425,815; 1918, \$1,773,821; 1919, \$7,347,866.

Additional value contributed by the wood using industry—1916, \$1,650,000; 1917, \$2,145,880; 1918, \$1,689,810; 1919, \$1,720,000.

Product of Dominion lands—1918, \$4,953,829.

Laths—1916, \$150,000; 1917, \$142,282; 1918, \$120,278; 1919, \$195,594.

Logs exported—1918, \$148,808; 1919, \$991,365.

Totals—1916, \$35,528,000; 1917, \$48,300,469; 1918, \$54,162,523; 1919, \$70,285,094.

What Some Western Mills Cut Last Year

The Canadian Western Lumber Co. at Fraser Mills led the field among British Columbia mills during 1919 in respect to cut, the Circle F plant almost doubling the cut of any other mill in the province. No less than eighty million feet of lumber was turned out last year. The nearest competitor to this figure is the Hastings mill with fifty million.

The output of other mills was as follows:

Canadian Western Lumber Co., 80,000,000 feet.

Brunette Sawmills, 30,000.

Small & Bucklin Lumber Co., 25,000,000.

Timberland Lumber Co., 20,000,000.

Fernridge Lumber Co., 1,000,000.

The cut of those in the district are reported as follows:

Thurston-Flavelle Lumber Co., Port Moody, 12,000,000.

Eburne Sawmills, 45,000,000.

Reynolds Timber & Shipping Agency, Port Moody, 25,000,000.

Hammond Cedar Co., 10,000,000.

Mr. Cox Left Large Estate

Robert Montgomery Cox, Ottawa timber merchant, left an estate in England of nearly one hundred and forty thousand pounds sterling (\$500,000). A legacy of twenty thousand pounds (\$40,000) goes to his partner, and several annuities to members of the family. The residue goes to Lady Grey and to St. Luke's Hospital in Ottawa, and to Bootle Hospital in Lancashire.

Little Things

There is nothing to equal an open fire as the purveyor of comfort and good cheer. It will chase away the gloom of the darkest day and when the winter winds are roaming outside, you are happy and contented in front of your hearths.

Every home should have a fire place. It does not add too much to the cost of a home when building and it can be added to present homes with but little expense.

The breakfast nook is comparatively new, but is exceedingly popular. There are many different designs to choose from and one will surely harmonize with the woodwork in either old or new houses.

Largest Circular Saws in the World

Henry Disston & Sons, Inc., of Philadelphia, have recently finished two of the largest circular saws ever made. They are of the spiral inserted tooth type, and are to be used by a well-known concern in the war West for cutting shingle blocks from the large trees of that section.

Each of the new saws measures 108 inches (9 feet in diameter) and in the rim are inserted 190 teeth. One may gain some idea of so tremendous a saw by comparing it with a 54-inch saw, which is large as we ordinarily think of the term. The 54 inch saw requires for its making an ingot of steel weighing approximately 180 pounds, and

Note height of saws compared with the man

its weight, when finished, is about 125 pounds. The 108 inch saw started out as an ingot weighing 1140 pounds, and after reheating, rolling and trimming, the remaining weight was about 795 pounds. In size, a 54 inch saw is apparently just half that of the 108 inch one, but actually the 108 inch is four times the size of the former, as a measurement of square inches of surface will show.

In the making of large circular saws, Henry Disston & Sons have had large experience. As long ago as 1876 they made one 100 inches in diameter for exhibition purposes. Some years after they made another 100 inch saw for cutting stone, each tooth of which was studded with a black diamond to give the necessary cutting edge. The turning out of a huge saw is a difficult process when one realizes that the ingot must be not only fashioned into a plate exactly straight and true, but also that the steel must be uniform in quality throughout the entire surface. Such are the facilities and improvements at the Disston Works that the standard machinery was used throughout. All that was needed, in addition, was extra man power as "holders up" during the smithing process.

Mr. Anderson Returns From England

Sidney R. Anderson, of the firm of Anderson, Shreiner and Mawson, wholesale lumber-merchants, Toronto, returned home recently after spending several weeks in the Old Country on business and pleasure. He was accompanied by his wife. Coming back on the Melita, which landed at St. John, N.B., the passage was a very rough one. Mr. Anderson states that there is every evidence that house building operations in the Mother Country will be very active during the coming season, and that structural work has already begun in the North. Mr. Anderson spent most of the time at his old home in Hull, where there is a great scarcity of dwellings and property is commanding very high values. Stocks of lumber at most points are low and there is an urgent demand for all kinds of wood products. Prices are soaring all the while, and the people in the Old Country are getting down to business after the war and resuming the pursuits of peace with energy and earnestness. A number of army huts, which were used in France, were recently brought over to London and sold at auction, bringing high figures. The material will be used for building purposes. Mr. Anderson found a number of inquiries were being made for Canadian woods, particularly hardwoods, such as maple, and states that the timber merchants for the most part are looking forward to a good year in the trade.

Wholesale Lumbermen Suffers Fire Loss

In a fire which destroyed the upper portions of the McKinnon building, on Melinda St., Toronto, much damage was done by smoke and water. Several lumber firms suffered considerable loss. The offices of Greig, Morris & Co., located on the top floor, and also those of G. A. Grier & Sons, were completely gutted, while the offices of James G. Cane & Co. on the floor below, did not fare a great deal better. While the furniture of the lumbermen was rendered useless they were successful in saving most all their office papers, etc. Greig, Morris & Co. have secured temporary quarters at 213 Jordan St., while J. G. Cane & Co. are, for the present, on the thirteenth floor of the Royal Bank Building, and Messrs. Fergus and Westley of G. A. Grier & Sons, have found temporary quarters at 79 Adelaide

St. East, corner Yonge. Repairs are now being made to the McKinnon building, and it is expected that, within the next few weeks, all the tenants will be able to move back to their former quarters.

Sawmill Waste Put to Good Use

Here are a few of the articles made from sawdust and shingle waste which the New York College of Forestry is exhibiting in its effort to show how the waste of the sawmill can be utilized to cheapen the cost of living:

"Silk" sacks, sausage casings, phonograph records, paper milk bottles and tanbark shingles.

The "silk" looks like silk and feels like silk, but is much cheaper than silk. The sausage casings are made by treating the wood with chemicals that turn it into viscose, and rolling this into thin films.

Stephen Wilcox Joins Silent Majority

As the result of an accident which occurred to him in a lumber yard a few weeks ago, Stephen Willcock, retail lumberman of Toronto, passed away recently at his home, 28 Shannon St. He was born in Toronto and had lived in the city the greater part of his life, being engaged in the retail lumber line on Queen St. West, and later on Bloor St. For ten years he was a member of the old Public School Board for St. Andrew's Ward. He leaves a wife and one daughter to mourn his departure. The late Mr. Willcock was a member of the Masonic fraternity and other organizations and was highly esteemed by a large circle of friends.

Death of Georgetown Lumberman

Henry P. Lawson, who was a successful lumberman in which business he was engaged all his life, died recently in Georgetown, Ont. Many houses in Georgetown were erected by him and his interest in the community proved beneficial. Mr. Lawson, who was born in Fyfe, Scotland, came to Canada in the early fifties, settling in Esquesing Township, and later residing in Georgetown. He leaves to mourn his loss, a family of three daughters and one son. Hemorrhage of the brain was the cause of death.

Samuel Lepine Passes Away in Ottawa

A well-known and highly respected resident of Ottawa, who had been identified during the last 44 years as employment agent for several big Canadian lumber companies, passed away recently in the person of Mr. Samuel Lepine.

A son of the late Moise Lepine, the deceased was born in Ottawa was 67 years of age, and had resided there most of his life. A man of sterling integrity and great geniality, the late Samuel Lepine had a host of friends in Ottawa, the Gatineau Valley, and Montreal, who will be shocked to learn of his death, which followed an illness of only two weeks. He leaves a wife, four sons and three daughters.

Hon. Mr. Cochrane Left Large Estate

The last will and testament of the late Hon. Frank Cochrane, former Minister of Lands, Forests and Mines for Ontario, was entered for probate recently in the Surrogate Court of Carleton County by Charles McRae, of Sudbury, solicitor for the estate. It disposes of an estate of \$449,190.74. The beneficiaries are the widow, Alice Cochrane, and the two children, Wilbur and Edith Cochrane. The will is dated July 17th, 1919, and the testator died on September 22nd. The executors are William J. Bell, lumberman, of Sudbury, and Norman T. Hillary, of Toronto.

Only Small Portion Goes Across Border

Discussing the rumor that unduly large lumber shipments have been made from British Columbia to the United States, a leading Coast manufacturer recently said:

During the year 1919, the total shipments from British Columbia to the United States amounted to only 21 per cent. of the entire export of the mills.

On the last day of December, 1919, there were 163,000,000 feet of lumber in stock in lumber yards of the coast district of British Columbia.

What prizes do you offer when promoting an essay contest among school children? One child in each school of an eastern city received an illustrated, cloth bound, 842 page copy of Webster's Secondary School Dictionary for writing the best essay on "The Advantages of Owning Your Own Home." These essays were all written in the period of one hour and were judged by the principal of each school. The children were delighted with the dictionaries and the dealers say it was one of the best advertising stunts of the "Own Your Own Home Campaign."

Scale of Allowances in Car Weights

The Railway Board Ruling Ends Inquiry Which Has Continued for the Last Seven Years

A judgment was lately received by the Transportation Bureau of the Board of Trade, Montreal, from the Board of Railway Commissioners, settling the long vexed question of allowance for variation in weights in cars, when weighed on railway truck scales with their loads. The ruling makes it specific that the scale of allowances for such variations in weight shall in future be made by the railway companies.

This followed a long series of discussions before the Railway Commission. It was represented by the shippers and consignees that the weights recorded by the track scales, when a loaded car was weighed, and allowance made for the weight of the car were not always correct. It was argued that the cars were weighed and their weight recorded when sent out, but this recorded weight made no allowance for variations in the weight of the car itself, due to alterations or repairs, accumulations of snow and ice, or other natural causes.

The investigation started in 1913 when the railways made application to the Railway Board for permission to reduce their scale of allowances. This was contested by the shippers, and the investigation which followed has lasted since then, and has been carried on by the Board at practically every railway centre in Canada.

As a result of this prolonged investigation the Railway Board has now issued a general order which provides for certain allowances for blockage, dunnage, etc., with carload shipments, and proper allowances for accretions of snow, ice, manure, etc. on the car at the time of weighing. The order also provides for "tolerance," that is variations in weights disclosed in check weighing or reweighing on certain commodities, all of which are specified in the order.

The order is taken as a general settlement of the dispute, with provisions for securing proper weight allowances for cars and any foreign matter adhering to them, while still making allowances for the difficulties experienced by the railways in keeping exact track of the car weights.

Relief Measures in Car Situation

A deputation of Ottawa lumbermen on March 4th waited upon the C. P. R. officials with reference to the embargo placed on the use of Canadian cars for the conveyance of Canadian goods to the U. S. The railways have decided that only foreign cars can be used for this purpose, owing to the shortage of Canadian cars, caused by their detention in the U. S.

According to a Washington despatch, an official of the United States Car Service Association states that an embargo of the kind was sent out from Canada at frequent intervals, but was never enforced. "Sometimes there are more Canadian cars on our lines, and sometimes the situation is reversed," said the official. "The balance, however, is usually in favor of this country; that is to say, there are more Canadian cars in the United States. This is perfectly natural, for a producing country like Canada always sends out more cars. There has been, and always will be free co-operation between the Canadian lines and ours in the matter of cars. Conditions are no better and no worse than they have been for some time."

Negotiations are now being conducted between the Car Service Association and the Canadian railway officials, so that most of the cars belonging to Canada may be returned, and an adequate balance be obtained. The Car Service Association have taken over the activities of the Railroad Administration in the matter of car allocation, and there are many adjustments to be made in various parts of the country. The Canadian tangle has already been taken up, and correspondence is being exchanged.

The Ottawa deputation to the C. P. R. pointed out the difficulty of securing foreign cars and the consequent delays to the shipments of lumber to the United States. The reply of the C. P. R. was to the effect that no relief could be expected until more Canadian cars were returned to this country, thus obviating the necessity of requiring the use of foreign cars by shippers.

The following statement was issued recently by the Railway Association of Canada:

"The press despatch emanating from Washington, in regard to the car situation as between Canada and the United States is misleading. It states that Canadian railways now have 16,000 cars in the United States. The facts are that United States railways had at February 1st 57,034 Canadian cars on their rails, and 16,000 only represents the excess balance of Canadian box cars on United States lines over the number of United States box cars in Canada. March figures will show that this unfavorable balance has been largely increased in February as during that month on car orders placed by the United States Railroad Administration for delivery of 279 empty

box cars per day to Canadian railways to offset in a measure the heavy excess loaded movement southbound, only 583 cars were delivered to Canadian railways out of a total of 8,091 that should have been turned over.

"This failure of United States railways to meet their obligations has made it necessary for the individual Canadian carriers to prohibit the loading of their cars to points on United States lines in order to protect domestic traffic, and has placed Canadian shippers of paper, pulp wood, lumber and mine products to points in the United States in a most serious situation which can be relieved only by energetic action on part of United States railroad authorities to have Canadian cars returned to their owners or to send United States cars to Canada to offset the heavy excess balance of Canadian cars in the United States."

Robert N. Bates Dies in London

Robert N. Bates, vice-president and managing director of the International Land & Lumber Co., Limited, of Ottawa, president of the British Canadian Industrial Co., and head of a large number of other industrial concerns in Canada, who has been spending some months in England, passed away recently in London from pneumonia. Mr. Bates was one of the outstanding figures in the financial and business life of the Capital, and held the office of vice-president

The late R. N. Bates, Ottawa.

and managing director of the International Land & Lumber Co. for a score of years—ever since its organization. The company's mills are located at St. Felicien, Lake St. John District, Que. The passing of Mr. Bates will be regretted by a wide circle of friends not only in financial circles in Ottawa, but also in the lumbering arena.

The Housing Act Does Not Satisfy

One of the most interesting discussions which took place at the recent convention of the Ontario Retail Lumber Dealers Association, in Hamilton, was some criticism of the Housing Act. A resolution came before the meeting to the effect that the Housing Act was not working out satisfactorily, and it was recommended that it either be rescinded or so amended as to make it practical and effective. It was thought that no good purpose would be served by the passing of such a resolution and the matter was finally dropped, but not before some censure of the Act had occurred. In its stead the following resolution, moved by K. J. Shirton of Dunnville, and seconded by W. M. Tupling, of Orillia, was carried: That the matter of the Housing Act be left in the hands of the Legislative Committee, to be taken up with the Government for further consideration, with a view to having the Act amended if further appropriation is made. This motion was unanimously carried. A few members considered that the work of the Housing Commission in some places was unsatisfactory and that there had been extravagance. Ottawa was mentioned as a place where the results had not been satisfactory to the owners, it was stated. On the other hand delegates present stated that the commission in Toronto and some other places had secured very low prices for houses built and, in some centres the contractors had lost money on the job. Hamilton was listed under this heading.

Lumbermen's Interest in Timber Supplies

The Preservation of Country's Wooded Wealth is Vital to Permanence of Lumber Industry—Scientific and Commercial Sides of the Problem

By Horace F. Taylor, of Buffalo, president of the National Wholesale Lumber Dealers' Association

I believe that all intelligent citizens have a fair conception of how vitally necessary it is that the natural resources of our state should have intelligent protection and should be made available at the proper time for such economical and thrifty use for the benefit of the public as shall not impair their permanent value. Our people who are engaged in the lumber industry are disposed to co-operate both in the formulation and in the practice of what may be agreed upon as a commonsense national or state policy for the protection of our timber supplies.

Our first purposes as lumbermen are, of course, commercial purposes, and I believe that even those members of this conference who approach the questions of forestry from the extreme academic point of view will grant the entire propriety of this commercial purpose, especially if through the considerations of this conference you may more nearly reach a forest policy which is ultimately to reconcile what I refer to as a commercial purpose with a truly scientific plan of forest management. This is the problem to be met. It seems to me that we have never had before us such a confusion of problems as now confront us. As has recently been said of other problems, it cannot be possible that some solution will not be found, and there must be found a solution of this problem of forest conservation if all interests, both public and private, attempt to unite in a spirit of mutual accommodation. The selfish interest of such must be submerged in the enlightened interest of all.

It rests with you to discover that a scientific policy and a commercial policy are in the long run one and the same. This is the end that must be sought, and such a conference as this cannot but realize some measurable progress toward the necessary end. Wholesalers as a class, in common with other lumbermen, sincerely pledge for themselves a broad-minded co-operation in this effort in spite of their commercial interest. Indeed I believe there are especial reasons why lumbermen will be quite as ready as any other class of citizens to bring to this general question of the conservation of our natural resources, a generous and broad-minded point of view.

Business Experience is Broad Education

This pledge on behalf of the wholesale branch of the industry I do not make in a perfunctory or careless way. Business experience is to-day a means of broad education. This is so clear to my mind that I believe the successful conduct of commercial business on any comprehensive scale has become a matter of profession rather than of trade. The ancient idea that business was simply a matter of "swapping horses" has long since given place to a very different formula. It is the unsuccessful men who have not discovered this. The typical lumberman is a successful business man, and as a rule has had a very thorough education, at least in the popular "school" of hard knocks. Let me go a bit further in an attempt to emphasize what I sincerely look upon as certain reasons why lumbermen and wholesalers in particular may be expected to approach this issue in a spirit of accommodation.

In the first place, I have definitely in mind the fact that in the daily prosecution of their business, lumbermen must acquire a peculiarly wide knowledge of our national geography, of the distribution of our sources of natural supply, of our very intricate problems of transportation, of methods of manufacture and distribution, and of our financial processes. I doubt if it would be possible to find a lumberman conducting business on any substantial scale who will not be found to be intimately interested in and even fairly well informed on these various subjects, for they have been included in the curriculum of his education.

I have been interested several times in making a sort of mental catalogue of the varied activities of individual lumber concerns. If you will do the same you will agree with me that there is hardly any line of legitimate business with which the lumber industry does not come into intimate touch, and in the case particularly of lumber manufacturers, they commonly engage in connection with their own processes in everything from the engineering work involved in the

falling and transportation of trees, railroading, the operation of telephones and telegraphs, the mechanical equipment, both steam and electrical, as well as the manufacturing process represented by their mills, and so on through a catalogue really too long to recite. Our wholesalers are experts in sources of supply and distribution of between thirty and forty varieties of native timber, and brought into daily touch with these activities; not with a single combination of these things in one locality only, but with all the variety of such combinations in a score or more of places, and so I am led to submit on behalf of the lumber industry that you gentlemen may very properly count upon lumber wholesalers to co-operate in the broad spirit for which this peculiar business education trains them.

Place and Function of the Wholesaler

It often happens that a manufacturer may do a large part or all of his wholesaling, or a wholesaler may engage from time to time in manufacturing, or a retailer in turn engage in wholesaling. Yet, you cannot by any imaginary device dispense with any of these functions. A man who has chosen to class himself as a manufacturer, or as a wholesaler, may desire to appropriate the functions of one or both of the other classes, but there is no greater mistake than to think that any one of these essential functions is thereby extinguished.

I am sure it will be accepted by the larger number of those present that the general formula by which our industrial processes are carried on is well sanctioned, if not truly sanctioned, by an evolutionary process covering so long a period of time as to be thoroughly well cleared of elements that are accidental rather than necessary. A clear recognition of the certain fact that our conventional trade classes do perform necessary functions, and that this applies in most cases to the necessary part played by the much abused "middleman," will serve to correct the common misunderstanding, as well as to prevent a very threatening but unjust condemnation, of wholesalers in the lumber industry, whose place and function cannot be denied, and whose members are, according to reliable information, increasing rather than diminishing.

If you follow my purpose, speaking on behalf of wholesalers, it is then to indicate that the wholesale function is an unavoidable one, and that so long as this function happens in our industrial order to be performed separately by those who call themselves wholesalers, wholesalers have a permanent vital interest in the conservation of our forests not only as a commercial matter, but for the broader reasoning I have been bold enough to pledge in their behalf as intelligent and patriotic citizens.

Mr. Booth is Best Loved Employer

During the course of an address to the members of the Brotherhood of Knox Presbyterian Church, Ottawa, Ont., Ex-Mayor Charles Hopewell described Mr. J. R. Booth, the veteran lumberman and pulp and paper manufacturer, as "the best-loved employer of labor in Canada, because he is in personal contact with his men year in and year out." Mr. Booth is never happy unless he is working around the mills, rubbing shoulders with his employees, and dressed in rough working apparel. Despite his great age of 94 years, he can be found at the mills any time during the day. He is a very hard man to get on the telephone, the usual answer given when anyone calls being "He is out in the yard; will you leave your name and number."

May Get Pulp from Alaska

The Supervisor of the Forest Service of Alaska declares that the territory has enough timber to furnish one-half the newsprint paper of the United States for an indefinite period, and that with proper care the industry could be made inexhaustible. This is of especial interest in view of the approaching disappearance of supplies in the Eastern forests, and financial interests have been already looking over the field. In the event of the project taking shape, and the removal by Congress of certain Government restrictions, which at present block the way of some mill plants, it is expected that American mills will be established at Ketchikan and Juneau, which it is hoped will equal the record of some mills across the Canadian border.

The Lumber Camp Instructor and the "Red"

Work Being Conducted by Frontier College in Guiding and Controlling Social Unrest

Outlined by Alfred Fitzpatrick of Toronto—Great Need of Teachers

Social unrest is nowhere becoming more active than in the frontier camps and works. Agitators are everywhere in evidence. They have at their finger ends the views of Marks and other exheremists on such subjects as the class struggle, the capitalistic regime, the need of a revolution, all production to the worker, etc. The great problem is how to combat their campaign. The best means of guiding and controlling this social unrest is the Frontier College resident instructors. No itinerant representative of either state or the church who spends only an hour at a camp or twice a year will serve the purpose. The instructor must live with the men.

To be successful he must also be the right type, a man who can fit into the many requirements of camp life as well, if not better, than the walking delegate or professional agitator. It is well, too, that the instructor have a knowledge of the principles of economics and of social science. He should be familiar with current maxianisms, perverted forms of socialism, and misleading half truths; but even this is not essential provided he is able to do his work in the bush, in the pit, on the right of way, or in the factory during the day. He should know one or two subjects well. These should relate to the daily life of the men, such as the solution of practical problems regarding their work. It is important, too, that the instructor show ability to improvise a concert from talent among the gang, give a lantern talk on the marvels of our native birds, water falls, construction of great works, such as the Quebec bridge, the Chipawa and Panama Canals, etc. This should be coupled with a pleasing personality, good hands and the ability to use tools.

Controlling Industrial Unrest

The Frontier College accordingly believes that the problem of industrial unrest can be controlled and combatted by the universities. Since it began its work, nearly twenty years ago, it has employed over 400 college trained men as instructors at more than 600 locations.

It is next to impossible, however, to find enough instructors in the winter season. Until the universities open branch centres of learning at all camps and works, and teachers may be educated at these new colleges, enough teachers cannot be had to meet the educational requirements.

It is, therefore, the imperative duty of universities to send teachers and as many of them as they possibly can spare from their staffs, to all camps, factories and works. Universities are being weighed in the balance to-day. Will they measure up to this great opportunity? Will they effect themselves, make the sacrifice of half their number of students, and half their professors and send them forth as teachers? If they will do this, they will return after many days bringing the sheaves of students with them to fill the old college halls to overflowing—students who would, it left to themselves, be converts to radicalism. The

Giving the boys a lesson on the "Digestive System"

camp. A little education is a dangerous thing. It would only make the men restless." Scores of employers, including a graduate of a leading Canadian University, refused to let the daily papers we sent in to camp reach the men, saying: "All the men read is the employment ads." This is a sure way to breed unrest. The men, having common intelligence, naturally resent the insult.

It is the duty of the employers, if they care for their own welfare, to see that their workers are well housed, to urge them to take an interest in the business, and to assist the government in furnishing all gangs of men and women with well-qualified teachers.

Matter of Compulsory Education

Legislation, such as the Wilson Bill, in England, which makes part time study compulsory, up to the age of 18, is the best answer to radicalism. The only trouble with that is, it does not go far enough. It is a step in the right direction, but the figure should precede the 1. Henry Ford, the Cash Register Company and others in the United States, and not a few British firms, provide for the education of their employees and give them their due. They are not troubled with radicalism.

Democracy in the government of workers is an excellent move in the United States. Let it be introduced here. Let the workers, themselves, co-operate with experts in education as to the courses of study they should take; and with the government, and employers as to the interest, if any, they wish to acquire in the business, and the proportion of the cost of education and entertainment they should pay.

Nothing short of a square deal, sanitary quarters, entertainment, an interest in the business, if desired, and compulsory education will check the ravages of radicalism.

It may be stated in passing that the woodsman, as a rule, comes of a sturdy stock with intelligence something above that of the average laborer, and that if camp education is to be a success anywhere, it has its best chance in the lumber, mining and construction camps. That it has proved and is proving a success, there is no doubt, and, many who were skeptical at first are now among its most enthusiastic supporters. The experimental stage has long been passed. Camp education has been thoroughly tried and found to measure up fully to the best that was said of it. It may be observed in closing that the fringe has only been touched in this great progressive step of national development.

Wash-day at the camp—showing lumbermen laundrymen

How to Increase Production on the Sticker

Running of Simple Mouldings in Multiples Cuts Down Costs—Can be Profitably Adopted by Most Planing Mills—Items to Consider

The subject of running mouldings in multiple was brought to my attention recently while strolling through a planing mill. One of the stickers, which was running cove, had been set to cut two lengths from one piece of stock.

The practice of running mouldings in multiples of two, three or more is one that is followed by many large operators and is one that can be profitably adopted by the small planing mill, in a more limited way. It offers a way of producing mouldings at less cost than by the single piece and materially increases the output of the machine. In addition it saves the labor involved in ripping and preparing the single strips for the sticker.

This method cannot be worked advantageously in every case so that before the running of mouldings in multiple is attempted, there are a few points that must be considered. The first item is, perhaps, the quantity to be run. It would hardly be worth while to set up to run a few hundred feet in multiple. This method works to best advantage when there is a large amount to be put through. Then there is the question of stock. It might not pay to run a moulding in multiple from a wide and higher-priced grade of stock if there was a quantity of edgings and narrow stock on hand. If that were done it might be found that taking the value of the raw material into consideration, the moulding run in multiple from wide material might cost more than if it had been made from the cheaper lumber and run singly. There are many cases where this method can be followed and a considerable saving effected.

The cove referred to was $1\frac{1}{4}$ in. each way and was being run from $6\frac{1}{4}$ stock. The lumber was ripped to about $2\frac{3}{4}$ in. wide and run through the machine. The top head was set to surface the top side and two ripping or grooving knives were attached. These knives were set to cut sufficiently deep that when the cove was cut on the lower head, the piece fell in two. The side heads were set to dress the sides, the knives being set at an angle to give a slight undercut to the finished cove.

The bottom head had a pair of flat and a pair of round knives, to cut the cove, attached. The widest edge of the cove was run on the bottom. This gave sufficient bearing surface on the outside bed to prevent the pieces twisting and allowing the last end of the length to drop on the knives and be dubbed or chewed up. In some instances it will be found necessary to attach a block on the back

Running two lengths of cove in one operation

bed to prevent this. The accompanying sketch shows clearly how this stock was run.

Quarter round is another item that can be worked out advantageously in multiple. I well remember when I started working in a factory, one of the first jobs given me was running quarter round. The stock was cut from edgings and waste material and was in various lengths from 4 ft. up. It was sawed to run singly. The way we did it was to place a form with a V in it, on the bed of the moulder and feed the stock in corner-ways, the cutting being done entirely with the top head. The material never feeds readily as there was not enough bearing surface on the rolls, and if additional weight were added, they would cut deep and mark the faces of the round. It simply meant shoving this through by main strength, much to the detriment of hands and morals.

The half-inch quarter round was the worst of all, as the stock was small and occasionally cross-grained. The result was that breakage was excessive both under the cutter and in front of the feed rolls, due to the strain of pushing the stock through.

There are a number of ways of running this item multiple and

two are illustrated herewith. The sketch showing three pieces being made is a method that is extensively followed on the Pacific Coast. Instead of three they run as high as five and six. Lumber is plentiful out there and they do not attach much extra value to wide stock. In addition most of their machines are heavy and not adapted to small work. If three were run at a time the saving thus effected would be considerable.

A description of the method followed is hardly necessary. The V's are cut on the top head. The inside head is not used at all

Two methods of running quarter round in multiple

while the outside one is merely employed to size the material so that the back gauge can be set nice and snug. The bottom head is used to finish off the rounds.

The other method illustrated is followed in many plants and effects a slight saving in material over the system described above. The top head is employed to surface the stock and both side heads are used. The knife on the bottom head is ground to a point and cuts through, dividing the piece in two. Here is an instance of where a block must be attached to the outside bed. If this is not done, as the last end passed through, the pieces would twist and drop on the knives with the result that a couple of inches would have to be trimmed off that end.

Two points that might be mentioned are that none but flat shoes are required, and if the stock should happen to be scant in places, it would not show on the face of the mouldings.

Quick Drying Depends on Kiln Operator

Every wood using industry is interested in finding a quick method of seasoning wood, and expects that some day a new type of kiln will be devised which will accomplish more rapid drying. The U. S. Forest Products Laboratory has observed, however, that few kiln operators attain the fastest safe rate of drying possible with present-known equipment, and that quick satisfactory drying depends more on the kiln operator than on the kiln itself.

These are things that when they apply make for slow drying in any kiln:

1. Some one part of the kiln load is drying slowly because of sluggish and uneven circulation, and is holding up the entire kiln run.
2. The kiln operator does not know when the lumber reaches the desired moisture content, and therefore leaves it in the kiln longer than necessary.
3. The lumber may be casehardened and therefore unable to stand fast drying.
4. Lumber air seasoned six months is given exactly the same treatment as that air seasoned only four months.
5. The kiln operator does not know the moisture content of the lumber when it is put in the kiln, and therefore can not apply the initial drying conditions which are conducive to most rapid drying.
6. The drying schedule is regulated by the number of days the lumber has been in the kiln, rather than by the actual moisture content of the stock and its ability to withstand more severe drying conditions.
7. Steam is not supplied to the heating coils at night.
8. The kiln operator looks at his kiln only once a day, and then does not look at the lumber itself.

Picturesque Days in Lumbering on "Ottawa"

When Square Timber Rafts Floated Down Stream—Six Men Were Allowed per Crib in Running Rapids and Slides—No Short Hours Then

By W. H. Cluff, Ottawa

As for the saw-mills of seventy-five years ago, either of them would look like a toy if compared with the wooden saw-mill as we knew it later on. My memory of them is that the whole machinery in each consisted of a bull wheel to haul the logs out of the water up to a level of the mill floor, one or possibly two heavy upright saws which ran at a slow, steady rate, a single edging saw, and a butting or circular crosscut saw, the two latter being but little used as the boards were usually sold with the rough edges still on and the ends left just as they came from the upright saw.

The saw logs cut up were a strictly local product, being drawn in from the surrounding country by farmers who were clearing their farms, and sold to the mill-owners for cash or traded for flour, or other necessities. These logs were brought in while sleighing was in good condition, and when the ice on the mill-ponds had been covered with them, as much as was decided advisable, the balance were then scattered, one or two deep, over the surrounding vacant ground, when in the spring after the ice had gone, the mills having cut up a portion of the logs in the pond, the logs scattered about over the vacant ground would be hauled to the banks of the mill-pond and dumped into the pond.

Rolled Into the Pond

The vehicle used for hauling these logs was a peculiar looking two-wheeled truck, drawn by a pair of horses. The wheels were about nine feet high; on the axle-tree was a contrivance operated by a powerful hand-lever and clutch chain that clasped the log as it lay on the ground and raised it so that it would clear all obstructions, and thus swinging under the axle, the log would be drawn to the edge of the pond and rolled in.

When the warm days of spring appeared and the snow had gone, these acres up on acres of nice clean fresh logs exuded from their ends a beautiful clear thick pine gum and it became a "Mecca" for every youngster in the town, who into tin pails, cups, jugs and every other conceivable container would gather this gum for the purpose of preparing it for chewing gum, the only kind then available.

Later on the Thompson mill was acquired by Wm. Taylor, who operated for a number of years, then retiring, built himself a comfortable home on the east side of what is now Parkdale avenue, where he ended his days at a ripe old age.

The McLachlin mill fell into the hands of Stephen Waggoner, whose jolly full round face and pudgy figure, with the old-fashioned swallow-tale coat which he wore every day at his work in the dusty grist mills, I have a very distinct and pleasing recollection of.

John R. Booth Comes

The beginning of the huge development of the water power of the Chaudiere as we have known it later on, was the arrival of Messrs. Harris & Bronson, of Painted Post, N. Y., then followed Captain Young, of Maine; Pattee & Perley. A. H. Baldwin, and the only Canadian, John R. Booth.

Before the arrival of these captains of industry, the lumber trade of the Upper Ottawa was for many years confined to the making of square timber in the woods, and the floating of it down the Ottawa in rafts to Quebec, when it was loaded in ships for the supply of the English market; little or no square timber is now produced.

The making of square timber entailed the employment of more men in the woods, as it was a semi-manufactured product that was brought out, and the labor was largely of a different class, some of it highly expert, such as scorers and hewers. The tales of the prowess of some of the more than usually expert of each class, are still legends in little settlements of their descendants.

When Irish Met Scot

The square timber men in the early days used to be largely composed of Irishmen, the descendants of Irishmen, and Scotsmen from Glengarry, and as each crew was composed of either one class or the other, naturally they did not mix; volumes could be filled with tales of rivalry between the factions; deeds of daring, recklessness, fights, sprees and other amusements used to float around wherever they met, especially after the crews were paid off in Quebec.

The square timber bosses were nearly all represented in Bytown, Gilmour, Jas. Stead, Robt. Stead, Nicholas Sparks, had their headquarters here; John Egan, Robert Conroy, in Aylmer; John Supple in Pembroke.

In the early days until the advent of railways into the Upper

Ottawa, supplies had largely to be got into the camps during sleighing season a year in advance of the requirements; these supplies consisted for the men, principally of flour, pork, beans, tea and such tools as were necessary, and for the horses, of hay and oats; great quantities of these supplies were sent up from here each winter as soon as the ice had formed sufficiently to make driving loaded teams across lakes and river and over swamps safe. Many a man and his team have been lost through venturing on weak ice.

Teams to Woods for Winter

In those days nearly every farmer who had one or more teams fit for shanty work sent them up to the woods for the winter. While the wages then paid would not seem very attractive to-day, they were attractive then. They were paid, fed, taken care of from the day they left, and generally they were well fed and well taken care of. It cost the lumberman too much to get them into the woods and would upset his whole season's work and all that it cost to prepare for it, if by reason of ill usage, sickness, disablement or discontent they should leave during the working season, so that if for no other reason than pure selfishness, they were bound to be well cared for.

Usually the men and horses came out in the spring well, fat and strong, and the farmer was ahead not only the wages he received, but the hay, oats and other feed for man and horse as well. True, the work at times was hard, but it was healthful, open air work in the pine forests; the hours were long, but the feed was good, and barring accidents the men and horses came out stronger and better men and horses in the spring than when they went into the camps in the fall and early winter.

Come Home Hungry

It was no unusual sight to see hundreds of teams loaded with all they could carry, leave here every day in the early winter, bound for the camps of the square timber shanties. Many on their arrival at the camp would work all winter, and to see the same teams dragging their empty sleighs through the slush and mud in March or April on their way home was not unusual.

Then towards the end of May the rafts would begin to reach the head of the Desdunc, as it was then called, now known as Britannia, on their way to Quebec. At the head the rafts would be broken up into cribs and be run down the rapids and through the slides to Bytown. It used to be great fun for the boys, when not at school, to go up to the head of the slides and then board a crib for the purpose of shooting the slides. The cribs, in places, would attain a terrific speed, and when the bottom of the slide was reached you were pretty sure of a ducking from the water and spray that was tossed high in the air and fell on the swiftly moving crib, but it was all part of the fun, and the boys when called upon later by their mothers to explain why their clothes were so wet, had to exercise quite a lot of ingenuity in the explanation.

Occasionally a crib would break up in the slides, that is the bottom log would shoot out from under the loading stocks, as the top logs were called. In that event sometimes the logs would stick in the slide or on the apron at the foot of the slide, and then the whole number of cribs above would have to be stopped until the way was clear. This was quite dangerous, and lives have been lost as a consequence.

Six men were allowed per crib in running the rapids and slides. As a raft would contain from 50 to 150 cribs, a raft crew was generally little over one man per crib; it follows that it took quite a while to run the whole raft in single cribs from the Head to Bytown.

No Six Hour Day Then

Two trips per day was the task of each crew. They got away from the raft as soon as possible after daylight, and after snubbing the crib in some bay selected to re-assemble the raft below the foot of the slides, walk back some seven or eight miles to the raft for dinner, then start on the second trip and then if all went well start back about 8 or 9 p.m. No six-hour day for these laborers.

During the busy part of summer squads of these stalwart lumber jacks could be constantly met on the Richmond road walking back to the head, each men with a pike pole, a handspike or a coil of rope over his shoulder.

Before all the cribs were down some of the crib crew began putting the raft together again. The cribs were brought in place and

tied to each with withes. These withes were usually saplings of birch from 12 to 24 feet long and not larger than 1 1-2 inches in diameter at the butts, were cut in the district surrounding Bytown, tied into bundles of 12 each, brought in wagon loads and disposed of to the lumbermen. They were twisted until they split into small long fibres, and thus became pliable so that they made a very strong substitute for ropes.

Lived on the Rafts

One crib of the raft was for cooking purposes, as the men all lived on the raft until they delivered it in the proper "cove" in Quebec. They slept in little board cabins scattered about on the raft. The cookery, as it was called, was an extra well put together crib, on which a fireplace about 12 feet square was put in centre. This was raised about 18 inches with sand and ashes, and confined on all sides by timbers. The fire was built in the centre and over it was a stick set in two crotches some six feet above the fire on which the pots for cooking hung; around the fire the bread was baked in four cauldrons. At nearly all times it was some bread, and the tea was strong enough to float an iron wedge, while the fried cakes were very fine. I can speak from experience on this subject; on the cookery the cook was monarch of all he surveyed.

Grenville Next Stop

The raft being put together, it started for the next breaking up place, Grenville, 60 miles away, getting away usually about five o'clock in the afternoon; it was a pretty sight; a small flag on each sleeping cabin, a flag with the owner's trade mark floating from a tall pole on one of the rafts, every man at his post with his 24-foot sweep duly poised, so it could be brought into operation at a motion from the foreman, who was in the centre of the raft, after rowing out from the bay in which the raft was put together and getting well into the current of the stream, it was allowed to float down stream and the oars were used to keep it straight and prevent mishaps.

I have treated square timber lengthily, because it is not likely that a square timber raft will ever again be seen on the Ottawa River.

How Eastern Costs Constantly Climb

The Maitland Lumber Co. Limited, of Liverpool, N.S., report that the cut in Queen's county will be one-third greater than last year and that their own cut will be about twenty-five per cent. larger. The weather for logging in that vicinity has been the most favorable in years.

Speaking of general conditions and outlook, the company say: All the lakes and swamps froze over early and there has been plenty of snow for hauling for the past six or seven weeks. Lots of snow and ice are still on the logging roads and this should help out the driving conditions. We find that wages, camp supplies, feed and equipment all higher and, we think that the cost of lumber from stump to cars will be, at least, 15 to 20 per cent. higher than in 1919. Help is scarce and hard to hold after obtaining. Prices are satisfactory in the U. S. If it were not for embargoes and car shortages, the owner of dry lumber to-day would be in rather an enviable position. But, with the high cost of operating we do not see how manufacturers of lumber can afford to sell their 1920 production at any less than present figures.

Another reason why the prices of lumber are advancing is owing to the growing scarcity of easily available stumpage. We have to keep going back from the streams and also to cut smaller logs than formerly. Stumpage has also advanced greatly in our vicinity. Stumpage is still selling very low if we take into consideration the time it requires to grow the timber and the cost of the land to grow it on, taxes etc.

From personal observation we can assure timberland owners in Nova Scotia that stumpage in the United States has advanced to a much higher level comparatively than in Nova Scotia. We have no doubt that most timberland owners in this province could make a lot more net profit to hold their lands a few years and then sell them than they can make by operating them. Of course, this would not be a good thing for the country. However, we believe that some scheme of better forest conservation could be worked out and adopted.

George M. Goding is the President of the Maitland Lumber Co., Edwin B. Starrett, Vice-President, and George S. McClearn, Secretary-Treasurer.

Death of Well-Known Western Lumberman

John F. Macrae, a well-known Western lumberman, died recently in Vancouver after a long period of ill-health. He was 68 years of age.

Mr. Macrae was a native of Bolsover, Ont., at which place while still a boy he identified himself with the lumber business. In 1882

he went to Rat Portage, where he was employed as millwright for the Rainy Lake Lumber Company, and later was with Cameron & Kennedy, a concern which sent him to the Pacific Coast when their interests were extended to this province.

Mr. Macrae recommended to his principals the purchase of the mill on False Creek owned by Mr. W. L. Tait, and when this was taken over became its manager, the name being changed to the Rat Portage mill. Under his direction the mill extended largely. About five years ago ill-health compelled Mr. Macrae to retire.

A widow and one son, William, survive Mr. Macrae. Another son, Kenneth, was killed while serving in France.

H. W. Dickey Joins Silent Majority

H. W. Dickey, manager of the Coast Lumber Yards, died of pneumonia recently. He was 35 years old and leaves his widow and one daughter, Jeanette, six years old. A brother and sister reside in Walton, Mass. Mr. Dickey was born April 11, 1884, in Troy, N.Y., went to Golden, B.C., in 1907, and moved from there to Winnipeg in 1910. He was representative in Winnipeg of the Columbia River Lumber company, with which he was connected at Golden and was also sales representative of the Canadian Western Lumber company, Fraser Mills, B.C. The remains were forwarded to Vancouver for interment.

Sodium Fluoride as Wood Preservative

Tests made years ago at the Forest Products Laboratory, Madison, Wis., indicated that sodium fluoride might be successfully used as a wood preservative, because it had high toxicity, was not injurious to metal, and was convenient to handle. Laboratory tests alone, however, are never sufficient to establish the value of any material as a wood preservative. Actual service tests, even though they require years to complete, are also needed.

In order to obtain comparative durability records, the laboratory in 1914 placed sap-pine ties treated with sodium fluoride, together with ties treated with zinc chloride and creosote, in one of the mines of the Tennessee Coal, Iron and Railway Company, at Birmingham, Alabama. Similar service tests were also started at this time on red oak ties placed in the tracks of the Baltimore and Ohio Railway Company.

After five years of service the mine ties which were treated with sodium fluoride have been found in as good condition as those treated with zinc chloride, both showing very little deterioration. The creosoted mine ties apparently were in still better condition, while the untreated ones were in various advanced stages of decay. The red oak railway ties treated with sodium fluoride were practically all sound, as were those treated with zinc chloride, whereas a large percentage of the untreated oak ties had been removed. Both of these tests, as well as others started later, must continue for a number of years yet before the relative value of the sodium-fluoride treatment for ties and timbers is definitely known.

Exhibit of Forest Products, Provincial Government of Quebec, at C.P.R. Windsor St. Station, Montreal

Operating the Small Sawmill Profitably

There has come to our attention the United States Department of Agriculture's Bulletin No. 718 by Daniel F. Seerey, Logging Engineer. The title of this little book of sixty-eight pages is "Small Sawmills—Their Equipment, Construction and Operation." While we would judge that it is particularly suited to mills of the portable variety where success has been somewhat shadowed, there are suggestions that greater, more experienced and more successful operators might find applicable to their conditions.

To the prospective mill owner or operator, the notes will be found hardly adequate. Certain departments of the Bulletin discuss arrangements and procedures in such detail as to assume the reader's total ignorance of the subject, while other and none the less important parts are treated at length insufficiently to give the paper as a whole any degree of unity, or to consistently appeal to the man seeking details indiscriminately. Just as an automobile is not run with a book of instructions in one hand, even the smallest mill is not built with the aid of a book, which, for example, under "setting up a portable mill" requires one ("for foundation timbers") to "place two pieces 10 by 10 inches by 14 feet long on either side of the saw pit." If you cannot set up your mill, the party from whom you bought your mill can very probably tell you "how." On the other hand, for example, details that would not be amiss are lacking. Under "Hammering a saw—Blocking," where it is mentioned that "No saw will run properly unless hammered for the correct speed," further details are left to the reader's imagination. Under "Filing," one is at a loss to know when a saw is "frozen." We quote, "If a saw is frozen, always thaw it out before attempting to set the teeth."

The general remarks of the early pages are particularly interesting and have more application than to small, portable mills alone. It is mentioned with a great deal of propriety that "Clean, wholesome living and sleeping quarters for the men, as well as properly cooked food, deserve close attention—a good deal more attention, in fact, than is usually bestowed upon them."

Under the heading, "Some Don'ts for Sawmill Operators," there are several ideas which a number of experienced operators, as well as others, might use to advantage. For instance, Don't No. 14: "Do not try to manufacture merchantable lumber with a dirty, rusty engine set on a rotten foundation with a shaky mandrel, rotten belting, a saw out of 'true' and running at half speed under insufficient steam from a leaky boiler. It can't be done." In general, information, somewhat obscured, is lost, however, through the absence of sketches and clear presentation. The chapters that appeal particularly to us are entitled, "Labor," "Some Don'ts for Sawmill Operators," "Piling Lumber," "Fire Protection," "Preparing Special Products" and "The Main Logging Road."

In this department of the Bulletin, certain liberty has been taken with fact, giving rise to an error of considerable magnitude. In not less than three places the unit of work (foot-pound) and power (horsepower) are confused in connection with "The Standard Horsepower." This is so fundamental and extremely simple, yet often misunderstood, that it may not be amiss to discuss at some length the relationship that exists between work and power. As stated in the Bulletin, a "Standard Horsepower is 33,000 foot-pounds" to which we must add per minute before the statement is valid.

Work involves an overcoming of resistance over or through a certain distance, the established British unit (generally used by English-speaking people) being the foot-pound. This unit is purely arbitrary and means simply that a resistance equivalent to one pound of weight has been displaced, moved or equivalently overcome through a distance of one lineal foot. If a one-pound weight were lifted one foot, one foot pound of work would be performed regardless of whether the operation required a second, a minute or a month to perform. Work in foot pounds, therefore, may simply be written:

Force, or weight, or resistance, expressed in pounds, multiplied by distance expressed in feet.

Power, on the other hand, involves time in connection with work, and is correctly defined as the time rate of doing work. A foot-pound per minute is, therefore, a unit of power. The common unit of power in the English system is the horsepower, which was fixed by James Watt, the "inventor" of the steam engine. Its name was originally coupled with the power of a healthy London draught horse, but in its exact sense has always been 33,000 foot-pounds per minute, 550

foot-pounds per second, etc. Power in foot-pounds per minute may be simply written:

Work (expressed in foot-pounds) divided by time (expressed in minutes). If the relation between work and power is not now clear consider a very simple case:

Suppose a log weighing 3,300 pounds were lifted 100 feet. Then, neglecting friction, work is done to the extent of 330,000 foot-pounds. Suppose this lifting of the log required one minute of time, or under other circumstances, required exactly ten minutes of time.

Then, in the first case, 330,000 foot-pounds of work were done in one minute, or at the rate of 330,000 foot-pounds per minute, which is equivalent to ten horsepower. In the second instance, the 330,000 foot-pounds of work were accomplished in ten minutes, or at the rate of 33,000 foot-pounds in one minute, or the equivalent of one horsepower.

While several particular parts of Mr. Seerey's Bulletin, "Small Sawmills," might not be substantiated by the opinions of successful "sawmillers" in general, a number of sound basic ideas, often lost sight of, are unquestionably well presented. Foremost of these is a concise statement in the opening paragraph, calling attention to the fact that "Profitable operation calls for first-class logging equipment and modern mills, and for good business ability, skill and hardihood on the part of the operator."—F. F. M. in "Lumber."

Production is the One Great Need

In its last issue "Guide to Millmen" the Simonds Mfg. Co. of Fitchburg, Mass., and Montreal, Can., says:

This country with the rest of the world is suffering to-day from lack of production. For nearly five years, brain and brawn have been devoted to destruction, or to the making of instruments of destruction. Other production has been neglected. Necessities and comforts have become scarcer and therefore dearer and we are facing a staggering cost of living.

The high cost of living can go no lower until production is increased.

Our present prosperity may be likened to a gold mine or an oil well—the more we take out, the less there is left; as long as we keep consuming more than we are producing, high prices and yet higher prices will prevail.

The laborer fears over-production and tries to make his job last; the manufacturer fears over-production and the consequent dropping of prices with a large amount of stock on hand—while the whole world clamors for goods, for production. Demand is not supplied, orders on hand increase, and the cost of living soars.

We understand that the people of Germany are now working sixteen hours a day. If they keep this up, they will be entitled to, and will get, more than their share of the world's goods, notwithstanding their handicap. The American farmer who works twelve to fifteen hours a day deserves greater returns than the American artisan who will work but six to eight hours a day.

The remedy is for each one to appoint himself a committee of one to see that he does more than an ordinary day's work, and if any spare time that he may have, to influence as many others as possible to do the same—to spread the gospel of production. As a community, we seek health, wealth and happiness for all; as a firm or corporation, we can spread propaganda.

Let us all unite our efforts toward making the new year and many years thereafter, years of prosperity and happiness, never forgetting that those who do the most deserve the most, and usually get it.

Lumber Journals Are Big Help

The retail dealer who fails to make the utmost use of lumber trade journals often hurts his own interest, sometimes even to the point of losing money in trade lost by this lack of proper information.

The lumber trade journal contains much information and advice of such a practical nature that it should pay for itself many times over in the course of a year. Money spent for subscriptions to two or three lumber journals a dealer may select should be considered a good investment.—Long-Bell Bulletin.

PUBLISHER'S NOTICE

Advertisements other than "Employment Wanted" or "Employees Wanted" will be inserted in this department at the rate of 20 cents per agate line (14 agate lines make one inch). \$2.80 per inch, each insertion, payable in advance. Space measured from rule to rule. When four or more consecutive insertions of the same advertisement are ordered a discount of 25 per cent. will be allowed.

Advertisements of "Wanted Employment" will be inserted at the rate of one cent a word, net. Cash must accompany order. If Canada Lumberman box number is used, enclose ten cents extra for postage in forwarding replies. Minimum charge 25 cents.

Advertisements of "Wanted Employees" will be inserted at the rate of two cents a word, net. Cash must accompany the order. Minimum charge 50 cents.

Advertisements must be received not later than the 10th and 20th of each month to insure insertion in the subsequent issue.

Wanted-Lumber

Stocks Wanted

Stocks of Lumber and Lath wanted—Spruce, Hemlock, Pine and Birch.

The Elgie & Jarvis Lumber Co., Limited,
6-7 18 Toronto St., Toronto, Ont.

Oak Wanted

Plump 4/4 Oak, red or white, green from the saw, 7 ft., 8 ft., 14 ft. and 16 ft. lengths. Grade No. 1 Com. and Better.

MERRITT & CO., LTD.,
5-6 Chatham, Ont.

Spruce and Shingles Wanted

We are always in the market for Spruce boards and 2 in., also Furring, Lath and Shingles.

RICE & LOCKWOOD LUMBER CO.,
1-8 Springfield, Mass.

Lumber Wanted For Cash

Will pay spot cash soon as on the cars at shipping point for Log Run Basswood, Elm, Birch, Maple, Beech, also Hemlock, Pine and Spruce Lumber and Lath, dry or new cut. Box 117, Canada Lumberman, Toronto. 3-6

Wanted To Buy Lath and Crating Lumber

All grades of Lath for immediate shipment or on contract for the season.

All kinds of crating lumber, rough or dressed. Send good description, quote f.o.b. Chicago, stating quantity offered.

COVEY-DURHAM COMPANY,
4-6 431 S. Dearborn St.,
Chicago, Ill., U.S.A.

Basswood and Maple Wanted

Fifteen carload dry 1sts and 2nds or No. 1 Common and Better white winter cut Basswood, plump 1 in. thick.

Twenty carloads dry hard Maple, 1 1/4" x 3 1/4" multiples of 9' and 12' in length, one clear face and square edges.

Twenty carloads Hard Maple, 6 1/4" x 6 1/4" and 5 1/4" x 5 1/4" x 22" and 28" in length or multiples, practically clear stock and free from checks; can ship green.

For further particulars apply to Box 85, Canada Lumberman, Toronto. 24-t.f.

WANTED

Rock and Hard Grey Elm Plank

suitable for bending purposes. Quote prices to The St. Mary's Wood Specialty Co.,
6-7 St. Mary's, Ont.

Wanted

4 x 4 White and Red Pine, also Norway Hemlock and Hardwoods.

BREWSTER LOUD,
1307 Majestic Bldg.,
6 Detroit, Mich.

Lumber Wanted

Spruce, Jack Pine, and Hemlock. Will contract for this year's sawing. Cash advance on logs at mill. Box 143, Canada Lumberman, Toronto. 4-7

Hardwood Lumber Wanted

Birch, Maple, Beech, Ash, Elm and Basswood, Dry or sawn to order. We send inspector. Box 166, Canada Lumberman, Toronto, Ont. 5-8

Lumber Wanted

Will contract for large and small stocks, Birch, Maple, Basswood and Ash. Advance on logs at mill. Box 142, Canada Lumberman, Toronto. 4-7

Cedar Wanted

We want to buy clear Eastern Cedar lumber. We are always in the market for this. Let us know what you have now or may take out later. We also want clear cedar lath, special sizes. There is good money in cutting these. Write us particulars.

Peterborough Canoe Co., Limited,
6-11 Peterborough, Ont.

WANTED

White Pine Spruce

ALL GRADES.

Also LATH of all grades

JOHN F. BURKE,
2-t.f. Aeolian Bldg., New York City.

WANTED--Hardwood Lumber

One million feet 4/4, 6/4 and 8/4 No. 2 Common and Better Hardwood Lumber, Maple preferred. Want kiln-dried stock but will take air-dried if price is right. Quote f.o.b. Detroit. Shipment in 30 to 60 days. Write me, stating what you have.

BREWSTER LOUD,
4-5 1307 Majestic Building,
Detroit, Mich.

Hardwoods Wanted

We will take your entire cut of Hardwoods, full or mixed cars. Good prices and cash advanced. Our buyers will call and see you on request.

The Pedwell Hardwood Lumber Co.,
5 79 Spadina Avenue,
Toronto, Ont.

White Pine Wanted

4/4, 6/4, and 8/4.
No. 1 and No. 2 Culls.
Mill Run.
No. 1 Culls and No. 2 Culls.

BREWSTER LOUD,
4-7 1307 Majestic Bldg.,
Detroit, Mich.

Lumber Wanted

Send us list of lumber you wish to move either car lots or block. Advances made. Our buyer is now out and will call on you.

The Elgie & Jarvis Lumber Co., Limited,
6-7 18 Toronto St., Toronto, Ont.

Crating Wanted

A quantity 1" and 1 1/4" dry Box and Crating Lumber, White Pine, Spruce or other soft woods, good widths and lengths. Quote price delivered F.O.B. cars Syracuse and Rochester, N.Y. or point of shipment. State amount you have of each kind, etc.

Advise if you can dress and resaw.

Wilson & Greene Lumber Company,
6 Syracuse, N.Y.

PULPWOOD

We are open to purchase peeled Spruce and Balsam Pulpwood in carload lots. Quotations furnished on request. Also Deal ends.

The Jost Company, Limited,
1-t.f. 285 Beaver Hall Hill,
Montreal, P.Q.

Lumber in Large Quantities Wanted

Wanted large quantities of Hardwood Lumber, Birch, Hard Maple, Beech and other woods. Best prices, fair inspection and prompt shipment. Apply Box No. 133, Canada Lumberman, Toronto. 4-7

Birch, Beech, Basswood, Maple and Other Hard- woods Wanted

Will pay spot cash on cars shipping point on any of the above; dry or green; log run or on grade. Will send inspector.

Wallace H. Partridge, Inc.
4-11 Springfield, Mass.

Pulpwood Wanted

Wanted to purchase pulpwood in Nova Scotia, New Brunswick, or Eastern Quebec, for home consumption for Canadian Paper Mill.

Address stating price, quantity and location,

FRANK J. D. BARNJUM,
4-11 Annapolis Royal,
Nova Scotia.

Saw Mill Men

We are in the market for Hardwood Lumber of all kinds; will buy entire output with all grades; advances made and highest market prices paid. Write us full particulars of stock.

THE LONDON LUMBER CO., LTD.,
4-7 London, Ontario.

For Sale-Lumber

Piling

We can furnish Piling, any length or size, on short notice.

WM. POLLOCK & SON,
4-7 Englehart, Ont.

Timber For Sale

3,000 acres Crown Right Virgin Timber in Ontario. Birch, Hemlock, some White Pine, Basswood, Elm. Warren Ross Lumber Co.,
Jamestown, N.Y. 6-t.f.

New Brunswick Merchantable SPRUCE

400,000 ft. 2" x 5" to 14" x 10/22'
200,000 ft. 1" x 4" to 10" x 10/20'

WILFRED H. PAUZE,
1802 Cote Des Neiges,
Montreal, Que.

FOR SALE—SPECIAL

Thick Oak, Dry Northern Stock

60,000' 6/4" No. 1 Com. & Btr. Plain Oak.
145,000' 2" No. 1 Com. & Btr. Plain Oak.
125,000' 2 1/2" No. 1 Com. & Btr. Plain Oak.
85,000' 3" No. 1 Com. & Btr. Plain Oak.
20,000' 4" No. 1 Com. & Btr. Plain Oak.

BUFFALO HARDWOOD LUMBER CO.,
4-7 Buffalo, N.Y.

FOR SALE

Three cars strictly dry 1 1/4" x 32" Mixed Lath, consisting of 80 per cent. White Pine, 20 per cent. Red Pine and Spruce, 100,000 3' outs from Mill Culls, a large percentage 3 x 11 White Pine. Apply,

BARRETT BROS.,
6 200 Catherine St.,
Ottawa, Ont.

B.C. SPRUCE

15c. per Thousand Feet

We offer slightly over one billion feet. Seventy-five per cent spruce, balance pine, fir and hemlock. Close to G. T. P. Near Fort George. Timber well located on good drivable streams. For particulars, cruiser's report, etc., write

LOUGHEED & TAYLOR, LIMITED,
8-6 Calgary, Alberta.

Spruce Knees For Sale

150 Grown Spruce Knees, 4' x 3' 6", finished 8', 9' and 10' thick; thoroughly sound, ready for immediate delivery. For particulars, apply A. K., Box 78, Canada Lumberman, Toronto. 6

Dry Merchantable Spruce

We offer for immediate shipment 15 M. 2 x 4 up to 2 x 8, 10 M. 3 x 3, 25 M. 3 x 4, 20 M. 3 x 5, 20 M. 3 x 6, 40 M. 3 x 7 up to 3 x 12, 10 M. 1 x 3 up to 1 x 7, 15 M. refuse, and 5 M. cull Lumber. Lumber sawed and piled in September, 1919, and therefore in dry condition.

For further information wire to Lancaster Dairy Farm, South Bay, N.B. 6

For Sale

Two million spruce lath, 1 1/4" x 4', for March, April, May and June delivery.

WILFRED H. PAUZE,
6 1802 Cote des Neiges,
Montreal, Que.

For Sale—Cottonwood

3 carloads 1" No. 2 Common Rough

R. T. GILMAN & CO.
MONTREAL

Believes High Prices are Here to Stay

"High prices of lumber are here to stay. Our field of supply is constantly getting further and further from the market and unless we undergo some industrial crisis the level of high prices will not only be maintained but will go a great deal higher. We must re-invest some of the proceeds from our forests in the recuperation of commercial trees on the non-agricultural lands that lie almost at our doors."

Such was the statement made by Dr. C. D. Howe, the Dean of the Faculty of Forestry, University of Toronto, in a lecture on Canada's Forest Resources before the Royal Canadian Institute, Toronto, recently. Dr. Howe said there were 1,600,000 square miles in Canada incapable of producing commercial forests, which left a forested area of 1,900,000 square miles. One million square miles of that latter area had itself been destroyed within the past 70 years through forest fires and did not now contain even saw logs, or logs 12 inches in diameter. Thus an area of only 900,000 square miles was left unburnt and of this there were 500,000 square miles fit only for pulpwood, while the remaining 400,000 square miles were capable of bearing saw logs.

"Forest fires will continue until the people themselves take more interest in the protection of their property. More time and thought, more money and energy must be put into the technique of fire fighting," said Dr. Howe. "Fighting fires in the bush requires specially trained men and special machinery just as does fighting fires in the city of Toronto."

"Experimental studies show that we are cutting spruce very much faster than it is being replaced, by natural growth. Similarly the output of white pine has

been decreasing and Ontario cuts less annually than it did 20 years ago."

Speaking of pulpwood Dr. Howe said that the supply in Eastern Canada was estimated to last from 15 to 1,000 years, according to the personal experience of the estimator. The shorter time limit was based upon the idea that only large sized trees would be cut. "However if we utilize the smaller trees covering the 1,000 square miles in the Hudson Bay region then our pulpwood supply is assured for many years."

National Wholesalers Will Meet in Washington

Progress arrangements are progressing rapidly for the twenty-eighth annual meeting of the National Wholesale Lumber Dealers Association, to be held at the New Willard Hotel, Washington, D.C., on Wednesday and Thursday, March 24th and 25th.

The Annual Meeting Committee has been appointed, consisting of Horace F. Taylor, Buffalo, N.Y., chairman; J. W. McClure, Memphis, Tenn.; R. R. Babcock, Pittsburgh, Pennsylvania; H. W. McDonough, Boston, Mass.; W. G. Power, St. Pacome, Que.; E. F. Perry, New York City, secretary. Mr. Perry has visited Washington and Buffalo in conference with President Taylor, and in a few days more complete details will be announced.

On Thursday, March 23, the Railroad and Transportation Committee, B. C. Currie, Philadelphia, Pa., chairman, will meet to consider plans for broadening the scope of the Transportation Bureau. On the same day a conference of representatives of lumber associations will be held under the direction of the Committee on Terms of Sale, F. S. Underhill, Philadelphia, Pa., chairman, for the purpose of recommending more uniform terms of sale in lumber transactions to the trade.

The other standing committees of the Association are at work upon their reports which will open subjects for discussion and there will be several addresses on subjects of live interest to the lumber industry.

Storms Interfered with Logging Operations

One of the first lumber firms to get through its winter operations this year was the R. Ludlow Young Co., of Taymouth, N. B., who operated on the Taxis River with 40 teams of horses. This concern put in for the Miramichi Lumber Co., for whom they cut and hauled seven millions, and last week, after a most successful season, they completed their contract for 1919-20.

Howard Young, Fredericton, who held one of the largest sub-

contracts for the operating firm, returned home recently. His contract was for one million and three-quarters of logs, which agreement he worked out ahead of all the recent storms, one feature of which was to baffle the heaviest storm by starting his teams out early the following morning clearing out the road before the crust which came and wrought havoc for so many others could blockade the roads.

Mr. Young had the services as foreman, of Elphat Banks, formerly of Durham, and lately returned from the Canadian West, a veteran logger on the waters of the Nashwaak. Unfortunately there is a different story to tell in regard to other large operations for the present season. In one case a firm with 60 pairs of horses is reported as now having hard lines, one, and not the least, of its troubles being to get substitutes for oats which cannot be had anywhere in the vicinity, although carloads of oats have been overdue by western trains for weeks, besides which hay supplies are also running pretty short.

DR. BELL'S Veterinary Wonder Remedies

10,000 one dollar (\$1.00) bottles Free to horsemen who give the Wonder a fair trial. Guaranteed for Colic, Inflammation of the Lungs, Bowels, Kidneys, Fevers, Distemper, etc. Send 25c for Mailing Package, etc. Agents wanted. Write your address plainly. DR. BELL, V. S., Kingston, Ont.

Review of Current Trade Conditions

Ontario and the East

The demand for all kinds of hardwood is keeping up and many inquiries are turned down with monotonous regularity. There are not sufficient dry stocks available and the call is excessive. In the thicker cuts of birch and maple there is almost a famine. Some small supplies are coming on the market from outlying points but these are eagerly seized upon and turned over before one can realize what has happened. One leading wholesaler stated this week that if the consuming manufacturers kept on bothering the wholesalers for supplies, he did not know what would happen. The result is a thorough combing of the available sources and active bidding for what can be corralled. He said this created a tendency to boost prices artificially and develop a condition in some quarters that was not healthy or permanent.

With the approach of spring, more interest is being evidenced by the wholesale trade in securing stocks for the coming season. It is reported that one large Ontario mill has disposed of a big portion of its output for 1920 to a Toronto wholesale firm. Sundry inquiries are being made and there is a considerable difference between the prices which certain manufacturers are seeking for their cut and that which some firms are willing to pay. The wholesalers allege that manufacturers are asking too high a figure compared with last year's quotations. The answer is that producing costs have ascended so much that it is impossible for a millman to meet the demands of labor, the agitation for shorter hours and other exactions, without adding considerably to what he received in 1919. The wholesalers, on the other hand, contend that the expenses of logging and lumbering have not advanced as much as many producers allege, and that it is only the clamor for stocks, one man bidding against the other, that is causing the present unusually high figures named. However, as spring draws near and a better perspective can be obtained of the situation, it is likely that some important transactions will be closed in the near future.

Business on the whole remains good, with a steady shipment to the United States, considering the number of embargoes that have been placed at divisional points. These, however, are now being raised and the car situation has altered materially during the past few days. Collections are good. Some retail yards are buying quite freely but others are holding back to see which way the feeling in regard to spring building develops.

February proved to be an exceedingly good month in Toronto for building. The record of the value of structures for which permits were issued in that month was nearly \$1,500,000. The highest figure ever reached during any other February was a million and a half.

It is stated by some authorities that there are certain contractors in Toronto and other cities who are loath to undertake the erection of dwellings this year owing to the high price of lumber, glass, labor, plumbing, brick, etc. It is alleged that soaring values have had a deterrent effect upon house-builders and that the majority of permits are for commercial buildings, warehouses, additions to manufacturing plants, etc. As an evidence of this, it is pointed out that the total number of house permits in Toronto, taken out during January and February of the present year, is 124 as against 192 for the corresponding period in 1919. This means that over 50 per cent. more dwelling permits were issued in the first two months of 1919 than in the same period of 1920. It is asserted that the prevailing scarcity of domiciles will not be relieved if a building programme in this line does not develop more quickly than the returns for January and February reveal.

In regard to Western stocks, some of the mills are now in a position to ship mixed carloads and these are coming through with more promptitude than for some weeks past. No big lots in any line have been released but orders for limited quantities can be supplied. Shipments are very fair. Shingles are holding firm with a fair amount of orders.

Great Britain

The main topic of discussion during the past few weeks has been the upward trend of values. Fir flooring has taken an immense jump and deals have been bringing some astonishing prices. So frequent have been these advances that timber merchants are wondering what next?

There is a great scarcity of hardwoods, due to the restriction in American imports, largely by reason of the adverse exchange, to-

gether with the demand, which is manifest on many sides throughout the country. The Government have very small stocks of hardwood left for disposal, and the trade feels secure about the position. Quite a large volume of business has been concluded during the past fortnight, and we believe that speculation plays no inconsiderable part in the recent dealings. Purchasing for the rise has been a very common occurrence, and many anticipate that unless the American exchange shows a great improvement in favor of the U. K., prices for hardwood will eventually reach the top figures obtained during the war. Prime quality is particularly in request, and parcels often change hands almost from day to day.

Referring to the prices of deals the "Timber Trades Journal" in a recent issue says: The trade has almost ceased to be astonished at anything, but the way in which deals are still advancing in value in proportion to other sizes is beyond the expectations of the most sanguine holders. When we first quoted £47 and £48 as the spot figure for 3 x 9 unassorted red in this country the price seemed a fancy one, but now it is the regular market quotation, and for small lots, which are urgently needed, £52 and even £54 is paid. The price for fifth deals has reached £45 in some cases. 11 in. deals are such a rarity that there is no market price, but we have heard of as much as £70 being quoted, and if this figure has not actually been reached it will probably have to be paid within the next few weeks. Shippers abroad are watching the situation very closely, and £6 difference in price is now quoted f.o.b. between the figures for 9 in. and 7 in. Of course, the absence of the Russian supplies has much to do with the present abnormal state of values, and as Russia cannot, in the best of circumstances, figure as an important factor in the market this year, the future of values is quite assured.

Owing to the scarcity of white wood, Swedish and Finnish shippers during the past year have been asking 15s. to 20s. per standard more for white wood than for their red wood—a complete reversal of the old standard of value. The height to which all prices have now risen, however, has had the effect of bringing about overhead quotations for redwood and whitewood, 7 in. and up. Sometimes a buyer will give a little more for white wood, but generally speaking the quotations are about the same. On the other hand, in regard to scantlings, such as 2 in. x 3 in., 3½ in., 4 in., 4½ in., 5 in., &c., white wood is at a discount, and it is instructive to note that while 2 x 4 red are quoted in the London market at about £40, 2 x 4 white are often sold as low as £37 to £38. The scantling sizes are, of course, wanted for house-building, and red wood is always preferred for this purpose when it can be obtained. Another anomaly in prices is the difference between Scandinavian timber and spruce. The former is now considerably dearer. During the past few weeks, during which European wood has been advancing by leaps and bounds, the spruce market has been quiet, and the prices have remained almost stationary. This is owing chiefly to the larger supplies in the country, and also to the doubt regarding the figures at which the Government stocks, which consist largely of spruce, will be sold to the trade. Probably when this point is settled the spruce market will gain greater firmness, as it will be impossible to import except at considerably higher figures.

United States

New developments in the general market situation are taking place and it is difficult to size up matters generally. Building prospects continue exceptionally bright and just how prices will be regulated during the coming season remains to be revealed. It is the opinion of some that the peak has been reached, if not passed. While there may be certain specialties like hardwoods or flooring or certain sizes of white pine in which production will be slower to catch up, and quotations therefore, higher, still on the general lines the assertion is ventured that values will not be increased further. This statement is giving weight by the fact that the Weyerhaeuser Sales Co. recently announced a move to stabilize prices, and announced that until June 1st they would make no advances over the scale in effect early in January. They feel that there is a necessity in the direction of stabilizing values. The Weyerhaeuser Sales Co. is one of the largest selling organizations in the lumber line in the Western States, and represents several of the biggest manufacturers of white pine, fir and lumber.

Another matter of interest is that the Railroad Administration as one of its last acts revoked the much discussed penalty on de-

HALIFAX, SYDNEY, N. S.

MONTREAL, QUEBEC, QUE.
ST. JOHN, N. B.

layed transit cars loaded with lumber, and the order of revocation will take place on June 1st. The cancellation of the objectionable penalty has been hailed with delight by the wholesale lumber interests.

In hardwoods the demand for oak and other grades continues to be favorable to the seller and has been strengthened by a great volume of inquiries for stock received during the last week. It is believed that the number of inquiries was affected recently by the car shortage, buyers realizing that it would be impossible to get transportation for stock if it were available. Although Memphis has been the storm center of the injunction suit recently filed by the Federal government against the American Hardwood Manufacturers Association for operation of the "open competition plan," the local market has not been affected by the litigation. The continued log shortage will become acute if weather conditions do not improve shortly.

As spring approaches, it becomes more than ever apparent that demand from the construction industry will govern the price trend for the next several months. For a time it was thought that the heavy requirements of the wood consuming industries would be reinforced by an active demand from foreign sources, but the collapse of European exchanges has all but eliminated export business as a market factor. As the industrial demand is more or less fixed, the builders appear to be the only important lumber consumers whose requirements are capable of any marked expansion, and future lumber prices, therefore, will hinge to a great extent upon the volume of building.

The return of the railroads to private management is welcomed

in lumber circles, not so much because an additional outlet for lumber is seen, but principally because it is hoped that early relief from transportation difficulties will be forthcoming. It is pointed out, however, that improvement in conditions which harassed lumbermen during the period of government operation will necessarily be slow as no early increase in railroad equipment is possible.

Orders for Southern pine received during the past few days were considerably below the level of the week previous, while a marked increase in production was reported. As the files of unfiled orders will for several months afford an outlet for any surplus production, prices will not be responsive to a short period of light business. More favorable weather is principally responsible for the improvement in production, though mills in the Southeast are still hampered by an inadequate log supply, due to a winter of excessive rainfall.

Wages of woodsmen are going up at many centres and a recent despatch from Wisconsin says:—There has been an increase in wages in the Lake Superior lumber camps, the men now demanding and receiving \$65 per month. This includes the wages of swamper, chain men, road men and everything except cant-hook men. Teamsters receive \$70 per month, cookees \$6., cooks \$100, cant-hook men \$70, deckers \$80 to \$100, foremen \$120 to \$150, and in many cases bonuses are given for employees who have remained in the employ of the company a stated time. All these wages include board and lodging, and since the saloons were closed, woodsmen quit the camps in the spring with several hundred dollars, it is said, with practically all of their wages to their credit.

ON CONDITIONS AT
HOME AND ABROAD**

Ottawa Reports Big Car Shortage and Good Demand

Continued firm prices, a strong demand with good lumber practically off the market, together with the greatest shortage of foreign cars that has ever been experienced by the trade, were the chief matters of importance in the Ottawa lumber market during the first part of March.

Compared with the month of February, or a corresponding period a year ago the market was much stronger, but as there were few foreign cars available to carry shipments to the United States, orders and what shipments there was stock to fill piled up. Inquiries made by the "Canada Lumberman" as to the foreign car situation indicated that lumbermen do not expect any general betterment of the situation for the next four or six weeks.

Reports from the trade gave the fundamental reason for the foreign car shortage as being due to the action of the American Railway Controller, previous to his handing back the roads from State to individual control and ownership. In trade circles it was stated that, previous to the roads being handed back, that the Controller had diverted every suitable car the different roads owned, to the north western and western States for the purpose of moving the grain crop. How long or how short a time it will take to move the crop no one cared to prophesy, but the general and apparently well grounded opinion of Ottawa lumber shippers was that the scarcity of foreign cars would continue for a month, or a month and a half to come.

The demand from the U. S. called for practically all grades of lumber, indicating that the American yards and buyers were willing to take anything they could get, and dispose of it. As there was little or no good lumber offered for sale the lower grades were about all the American purchasers could get. The domestic demand was largely for grades from mill culls up to seconds in the building lines. Pine stocks in all grades remained scarce and high, which resulted in a greater activity in some stocks.

The outlook for future immediate business with the United States was regarded as being uncertain and unsatisfactory on account of the car situation. The prospects for Canadian and local business, however, brightened as reports from various sources indicated that plans for spring building were going steadily ahead. The European export situation showed little or no change. Nothing more was heard of the report that the Dominion Government was to place an embargo on export lumber shipments.

Regarding the prospect of a further advance in the price of lumber there was a difference of opinion. Some operators thought that the price would be likely to still further advance on account of the increased production costs, while others stated they would like to see it stay where it now was and not go any higher. "The prices to-

day are abnormal and have been brought about by high operating costs and abnormal conditions. For the general welfare of the market I would be glad to see the prices stay where they now are for the next six months," stated Mr. P. C. Walker of Shepard and Morse.

Mr. Walker further pointed out that while stocks to-day were abnormally low, and the demand for practically all grades was great, that it would be more or less an imposition or a hardship on the consumer if the prices went higher, unless production costs for this winter's operations showed an unexpected jump.

What prices will prevail for next season's saw cut was a mystery. Though the season was early for such information it was reported that skirmishing had already begun by some of the buyers with the view of finding out what figures the manufacturers were likely to quote for this year's saw mill output. Though operations had not actually got under way and will not likely commence until around May 1st, with the Valley Mills, it was expected that this season's saw cut would range anywhere from twenty-five to forty per cent. more than last year. The saw cut of 1919, as is referred to in the annual report for the Statistical Number, was abnormally low, so that the expected increase for this year if it materializes will likely be only slightly higher than the cut for 1918.

Conditions with the factory and woodworking plants, outside of the W. C. Edwards Co., did not show a great deal of change. While no formal demands have yet been presented by the factory employees it is expected as being natural that a further increase in wages will be asked by the Union, related to this side of the industry around April 15th, to become effective May 1st.

Orders and inquiries for sash and door, dressed lumber, and other products of the woodworking plants showed an increase over the month of February and indicated better business than that which prevailed a year ago. Retail stocks were not heavy, but in the case of some companies who manufacture and use their own lumber, there was reported to be sufficient stocks on hand to carry them through until the saw cut for this year comes onto the market.

In the case of the W. C. Edwards & Co., the lowest water level in twenty years developed in the Rideau River, from which stream the company derives its operating power. It necessitated the closing down for a week or ten days of the sash and door factory, the box factory, and a considerable part of the planing mill.

A man of average ability who is absolutely dependable and reliable, is worth a regiment of brilliant fellows whose balance wheels are not so certain.

The greatest stumbling block in the pathway to success, is common, ordinary laziness.

EDGINGS**Ontario**

W. F. Hamlyn, Belmont, Ont., is equipping a new sawmill at that point in Middlesex County.

H. Willert, of Dashwood, Ont., has purchased the Elson sawmill at Crediton and will convert it into a flax mill.

Fire destroyed the sawmill of Malloy & Brian, Haliburton, Ont. The loss is \$40,000. It is expected the mill will be rebuilt.

The sawmill of Simon Jackson, Wagawville, Ont., was recently wiped out by fire. The loss is \$3,000. The owner will rebuild.

The Petawawa Lumber Company's plant at Brule Lake Station, Ont., was recently destroyed by fire. The company will rebuild at once.

Canadian Nashua Paper Co., Limited, Peterboro, have been incorporated to manufacture and deal in paper, cloth and fibre of all kinds, and to take over as a going concern the Nashua Gummed & Coated Paper Co., Peterboro.

Good progress is being made on the extension to the plant of the R. Laidlaw Lumber Company at the corner of Dundas West and Bloor Streets, Toronto. The addition is two storeys high, 50 x 120 feet, and of brick construction.

Canada Timber Limited, Montreal, P.Q., have been incorporated to manufacture and deal in lumber and wood products of all kinds, timber and pulpwood. Capital \$75,000. F. P. Brais and L. M. Smith, Montreal, are two of the incorporators.

Bishopric Mfg. Co., Ltd., Ottawa, Ont., have been incorporated to manufacture and deal in pulpwood, building material, wallboard, lumber and other wood products. Capital \$150,000. G. T. Barrett, lumberman, and T. W. Bernard, both of Ottawa, are among the incorporators.

The North American Lumber Co., Limited, Toronto, have been incorporated to carry on a business as manufacturers of timber, lumber and other wood products. Among the incorporators are J. C. Leith and A. C. Crysdale, both of Toronto. The capital stock is \$100,000.

The Mavis Timber Co., Limited, Toronto, with a capital stock of \$200,000, was recently incorporated to carry on business as timber merchants and manufacturers and dealers in lumber and wood products. Two of the incorporators are J. L. Ross and A. W. Holmestead, Toronto.

The Belleville Sash & Door Co., Limited, Belleville, have been incorporated to manufacture and deal in sash, doors, finishing material and wood products of all kinds. R. J. Graham and J. Bone, manufacturers, of Belleville, Ont., are two of the incorporators. Capital \$40,000.

At its meeting recently the Guelph Chamber of Commerce, Guelph, heartily endorsed the project of deepening the St. Lawrence River, and will send delegates when the matter comes before Parliament. A strong resolution was passed calling upon the Ontario Government to conserve the timber limits, and requesting that for every tree cut another be planted.

Premier Drury of Ontario lately stated that there would be an extension to the T. & N. O. Railway lines. Seventeen miles will be added to furnish transportation for the development of the pulp industry. It will be started just as soon as the province gets the proper assurance from those interested in the pulp plants that they are really going to develop the industry. It will be operated by Hydro power.

It is believed that the lumber and timber shipments from the north will create a new record this year. The yards at Uno Falls, Ont., are now almost full to overflowing and trains are drawing in steadily. The same applies along the line, especially down below Latchford. Barnard Brothers have eight teams drawing from their mills and soon expect to ship out a million feet. The Armstrong mill also has several hundred thousand feet ready to go out.

The Muskoka Cordwood & Lumber Co., now in liquidation, announces the sale of lumber on their Southwood estate to the Standard Chemical Company and to J. Goerk. There is still a considerable amount of lumber to be sold, and Alex. MacGregor, 614 Confederation Life Building, Toronto, the solicitor appointed by the creditors, is receiving tenders for the same. There are about two hundred creditors in the Earlscourt district, Toronto, who have paid deposits on their wood, but have not all received delivery.

Eastern Canada

Rouleau & Fils, whose sawmill at Grand Mere was recently destroyed by fire, will rebuild at once.

Price Brothers, Quebec, propose to erect a six-storey office building in Quebec, plans for which are being prepared.

The Wightman Lumber Co., Limited, of Bathurst, N.B., has been granted a federal charter with a capital stock of \$24,000.

The Great Eastern Pulp and Paper Company, with headquarters at Quebec, and a capital stock of \$3,000,000, has been granted a federal charter.

Recent Quebec registrations include the following lumber companies:—Blais & Frere, Cap de la Madeleine; Roberge & Belliveau, St. Octave de Bosquet; Star Lumber Co., St. Lambert.

The Martinon Lumber Co., Limited, Fredericton, N. B., have been authorized by supplementary letters patent to increase their capital from fifty thousand dollars to the sum of five hundred thousand dollars.

J. S. Wilson, Limited, Montreal, has been incorporated to manufacture and deal in paper, pulpwood, and paper products. Two of the incorporators are Henry Chauvin and Harold Walker, Montreal. Capital, \$2,500,000.

The low condition of the waters in rivers on the north and south shores, owing to the early freezeup last November is reducing the lumber and pulp wood output very considerably, says a recent despatch from Quebec.

Thibault, Limitee, Montmagny, P. Q., have been incorporated to deal in lumber, furniture, doors, sash, and other wood products. R. Thibault and

N. Letourneau, of Montmagny, P.Q., are among the incorporators. Capital \$99,000.

The French Government have sold to an Ontario firm about 45 million feet of lumber, purchased about two years ago from New Brunswick, Nova Scotia and Quebec manufacturers. The lumber was disposed of by the French Government by tender.

The Montreal Building & Construction Co., Limited, Montreal, P. Q., have been incorporated to manufacture and deal in timber, lumber, and wood products. G. L. Alexander and D. R. Cameron, of Montreal, are among the incorporators. Capital \$100,000.

A serious fire recently destroyed the lumber mill of the Martinon Lumber Co., at Rocky Gulch, a few miles from Campbellton, N.B. It had been in operation at that point for a number of years and was one of three owned by the company which is operating on what is known as the Alexander limits.

The Hartland Lumber Co., Limited, Hartland, N. B., have been incorporated to conduct a general woodworking business and to manufacture and deal in furniture, flooring and building material. A general lumber business will be carried on. Capital \$18,000. H. H. Hatfield and R. W. Cameron, of Hatfield, are among the incorporators.

Stanley Douglass, of Fredericton, manufacturer; Morris R. Perley, of Devon, accountant, and J. J. Fraser Winslow, of Fredericton, barrister, have been incorporated as Stanley Douglass, Limited, to carry on in all its branches, a lumber, timber and pulpwood business, and to manufacture, produce, buy, sell and deal in timber, logs, lumber and wood of all kinds. The capital stock is \$180,000, and the head office at Devon, in the County of York.

Henry E. Haley, manufacturer; J. Lucius Haley, manufacturer, and Harold R. Haley, clerk, of St. Stephen, have been incorporated as Haley & Sons, Ltd., to purchase and take over the woodworking, milling and lumber business carried on by Henry E. Haley and J. Lucius Haley, doing business under the firm name and style of Haley & Son. The capital stock of the company is \$299,000, and the head office in the town of St. Stephen, N.B.

The Beveridge Paper Company, Limited, Montreal, report that the sales to the mills of their Plibrico Jointless Fire Brick for linings of steam boilers, Dutch ovens and wood burners are increasing, owing to the fact that any handy man can do the work. Although the company have just trbled their output they are away behind with deliveries. Stocks are carried at the following points, in addition to stock in Montreal: Thompson & Sutherland, New Glasgow, N.S.; Shell Bar Boico Supply, Ltd., Toronto, Ont.; Winnipeg Supply & Fuel Company, Ltd., Winnipeg, Man.; Gorman Clancey & Grindley, Calgary and Edmonton, Alta.

Western Canada

The Foam Lake Lumber Co., Ltd., Foam Lake, Sask., has been incorporated to deal in lumber and building material. Capital \$20,000.

Guss Custer, of Calgary, who is a well-known lumberman, has purchased a sawmill from Simon Taylor near Wasa, B.C., and will operate the plant.

The Pas Lumber Co., Ltd., Winnipeg, Man., was recently incorporated with a capital of \$1,000,000, to manufacture and deal in lumber and building material of all kinds.

Nelson S. Loughheed, of Port Haney, was recently in Prince Rupert in connection with the development of work at the Prince Rupert Spruce Mills, which will start sawing this month.

The Thompson-Ford Lumber Company sawmill at Kelso, B.C., was recently destroyed by fire. The loss was about \$40,000, with only \$20,000 insurance. The company will rebuild at once.

Instead of using the money which the Federal Government is advancing for actual building, Commissioner A. J. Samis, of Calgary, proposes that it be used to move in houses from the remote subdivisions to the centre of the city where much idle land is accumulating taxes.

Secretary Armstrong, of the B. C. Loggers' Association, says that the open shop in the logging companies is working out quite satisfactorily. He reports that the men like the system and the logging companies have not met with any direct act of opposition to the carrying out of the open shop policy.

Perry Lumber & Shingle Company, Limited, of Arrowhead, B.C., with a capital stock of \$50,000, the Haney Lumber & Lath Mills, Limited, of Vancouver, with a capital of \$50,000, the Elk Bay Lumber Co., with a capital stock of \$100,000, and the Sicamous Sawmills, Limited, of Kamloops, with a capital stock of \$100,000, have been granted provincial charters.

According to an announcement made by the Hon. T. D. Pattullo, Minister of Lands for B. C., timber sales this year have been far in excess in point of number and value to those in the corresponding month of last year. Forty-three individual sales were consummated in January, 1920, as against 38 in January a year ago. The value received by the department in respect of them, amounted to \$143,575, or two and a quarter times as much as the revenue in January, 1919.

Heavy circular resaws, planers, rip-saws and other machinery of a like nature are being installed in the old planer mill of the British Canadian lumber mill at Queensborough, B.C., by G. O. Buchanan, for the purpose of converting into marketable use the estimated four million feet of timber contained in the platforms of the yard area of the dismantled mill. Mr. Buchanan will operate his plant by electric power and a 75-h.p. motor is being installed for that purpose.

The plan of towing lumber to the United Kingdom from British Columbia on a gigantic lumber raft is to be tried out this year by British Columbia lumbermen. Recently two men from Sweden, who have had considerable experience in building ocean rafts reported to Mr. F. L. Buckley, of the Masset Timber Company (1919) Limited, who, with English associates, proposes to transport 10,000,000 feet of lumber across the Atlantic by solid raft construction. It is expected that it will be six months before the raft is ready to be towed as the Masset mill has no lumber in stock and other mills, which may also ship by the raft, are well stocked with orders. The gigantic raft will be towed to the Atlantic by way of the Panama Canal.

DISSTON-SAWS

THE BEST KNOWN SAW IN THE WORLD

Each year finds a greater number of leading mills using Disston Saws exclusively. Mill operators know that the success of their mill—the quality and quantity of lumber they turn out—depends on the saw they use.

It is natural, therefore, for them to choose Disston Saws—the acknowledged standard in quality for 80 years.

Production Paramount

"The Invariable Choice of the Man Who Knows."

Type C-1 Moulder

This machine has made some wonderful records both for quantity and quality of production.

It is designed primarily to make mouldings on a large scale, yet in a smaller mill it can be economically used as moulder, matcher and surfacer.

The vibrationless construction and the extra efficient heads combine to give stock a finish which cannot be improved by a sander. Rates of feed up to 150 feet per minute.

We shall be glad to send you details of this "3 in 1" machine. Free and without obligation to you. Send in your request at once.

TORONTO HARDWOOD PRICES

The prices given below are for carloads f.o.b. Toronto, from wholesalers to retailers, and are based on a good percentage of long lengths and good widths, without any wide stock having been sorted out. War tax of seven and half per cent. on imported woods, and also the prevailing rate of exchange paid by purchaser.

"Broken! What No. 1 Again?"

Yes, broken again! The old, old story of the manufacturer who insisted on using belting of inferior quality. In times of big orders, or important deliveries, when the utmost efficiency is required, inferior quality belts will not stand the strain.

Surely you realize that your belting bill does not consist of its initial cost alone. Consider that tell-tale drag on finances through constant repairing plus loss of time and danger to life.

These items alone during one year will swell to amounts that would keep you installed with "Camel Brand Belting," and in this way insure yourself constantly against shrinkage and excessive repairs, and could be relied on to transmit the full power of your plant with practically no loss. "Camel Brand Belting" may be obtained in all widths. Write us to submit our prices.

TORONTO

AN EFFICIENT BARKING MACHINE

**THAT WILL DO YOUR
WORK SMOOTHLY
AND ECONOMICALLY**

This machine will not only do the work demanded of it under all conditions, but it will operate at a surprisingly small upkeep. Only ten horse power is required.

It has a tension spring which controls the wheels over all irregularities and according to the thickness of the bark.

This machine will prove an attractive investment in every way. Write for particulars.

Manufactured by

**La Compagnie
Manufacturiere
F. X. Bertrand
ST. HYACINTHE, QUE.**

Below is a photograph showing the Moreau Barker under actual working conditions. It is handling logs from 3" to 50" in diameter and doing it with comparative ease.

Keep in Close Touch with Building Conditions

Lumber, being one of the most important construction materials, is closely connected with the building trades. You can keep in touch with the progress of construction by reading the "Contract Record and Engineering Review." It is published weekly and gives you the latest developments in the building world.

Why not become a regular subscriber—only \$2.00 a year brings it to you for fifty-two issues? Order direct from the publishers.

QUALITY WORK DEMANDS QUALITY CLOTHING

While good reliable clothing is essential to the lumber camp at all seasons, during the changeable spring weather the outdoor worker has to give particular attention to his wear to guard against changes in temperature, as well as the damp days.

Clothing meeting these requirements must of a necessity be well made, and of the best.

With this aim in view we have arrived at one standard of quality that remains unchanged in every article which bears our name.

The Northern Lumber Co. of Cloquet, Minnesota, has for years been using our babbitt metals. Here is what their Chief Engineer wrote about Aluminium Genuine Babbitt:—

"In one instance, I used your Aluminium Genuine on a 7" crank pin of a 30 x 48 Corliss Engine. It has been running two seasons at 85 R.P.M. and has never warmed up once and wedge block has not been drawn up to exceed 1/8 of an inch."

Real evidence of this character from a practical man is worth more than volumes of "just talk." Aluminium Genuine Babbitt will run cool under any speed; it will stand up any pressure or impact. Shall we send you a sample bar?

Electric Light in the Lumber Camp

Electric Light is convenient. It cuts out most of the chances for fire, and saves all the bother of oil lights. There is nothing complicated about the

Fairbanks-Morse Power & Light Plant

It can be run by any one and supplies current for 40 20-watt lamps.

The plant is compact, sturdy, portable and efficient; it can be taken anywhere that a wagon or sled can go.

The engine runs nine hours on a gallon of coal oil and develops $1\frac{1}{2}$ horse power. The generating unit weighs but 500 lbs., the batteries 400 lbs.

A belt pulley is provided so the engine can run a pump, the grindstone, the saw gummer or any other light machines for the blacksmiths or repair shop.

Increase the efficiency of your men by adding to their comfort and providing them sharp tools to do their work.

Adams Pointers

Made at Penetang, these powerful and efficient gasolene boats are giving satisfaction all over Canada.

Lumbermen will find it quicker and cheaper to work with an Adams Pointer. It is easier and safer to use than alligators and tugs.

The Adams Pointer has a well - built, easy running engine, and powerful and reverse gear towing winch, and will prove equal to the heaviest work.

Get further particulars and blue prints, which give in detail the points wherein our Pointers excel.

The Machine That Made a Record in a Recent Lath Cutting, 10 Hour Test

Four Hundred Sawmills in the Dominion are to-day using this machine.

It has all the latest improvements and for quick, clean work has no equal.

The Payette No. 1 Bolter will cut, count, tie and pile 128,350 laths in a period of ten hours. The above consisted of 4 foot laths, 1½ by ¾ inches, and constitutes a record in rapid lath cutting.

If you are not using a Payette No. 1 Bolter you should be.

Shall we send you full particulars and prices?

Would You Spend \$575 to Save \$2,000?

Last Fall a certain lumber concern in Ontario purchased a small 10 H.P. Double-Drum Belt-Driven Hoist from us for handling logs. This machine cost them \$550, plus \$25 freight, total \$575. They operated this small Hoist by a belt from a gasoline Engine, the whole making a light, compact, portable outfit, easily moved from place to place.

They were able to work this outfit in the coldest weather, and found that it did the work of three or four teams.

As it required only one man to operate the Hoist, it is easy to figure the daily saving effected by the use of this machine. In other words, compare the wages and board of one man and the cost of a little gasoline with the wages and board of four drivers and the feed and upkeep of eight horses.

This machine handled up to one thousand logs per day.

We make these machines for either Steam or Gasoline Power, and in 7 sizes, one of which should be just right for your use.

Sales Agents: Mussels, Ltd., Montreal, Toronto, Winnipeg & Vancouver.

When You Overhaul Your Mill

THERE are wet places in every saw and pulp mill where nothing but the highest class belting can "make good." It is for these wet places that we recommend what most mill-men swear by—our

"ACME WATERPROOF" BELT

This belt is especially made for a rough and trying service. It has less stretch than any other belt by 15 to 25 per cent.

When you are overhauling try a Goodhue "Acme Waterproof" belt. Other Goodhue belts are "Extra" and "Standard."

Prices and Particulars on Request.

MONARCH TRACTORS

Are the acknowledged leaders, they give the maximum traction. THE MONARCH tracks—with their crawling irresistible grip on the ground—enable the MONARCH to negotiate hills, grades and loads, that would seem impossible.

MONARCH TRACTORS appeal to everyone requiring motive power; everyone, whether tractor-wise or not, sees at a glance, that the traction principles of the MONARCH mean power to haul its loads over rough, wet, sandy or loose ground, also snow and ice.

Lumbermen, Road Makers, and Farmers are one in their praises of the power and performance of the MONARCH TRACTORS which under all conditions and every day in the year, will perform heavy duty.

For full information, specifications, etc., write to the

Monarch Tractors, Limited, Brantford, Ontario.

Perfection Hollow Blast Grates

18 Years in Service — Thousands in Use

**BURN GREEN SAW DUST:
SAVE & SELL YOUR WOOD**

For every thousand feet of lumber sawn approximately one cord of wood is produced, worth from \$2 to \$4. Consider your additional dividend if you sell this waste wood instead of burning it. Your sawdust alone will produce all the steam you require. Our grates will burn water-soaked or green sawdust and increase the steaming capacity of your boilers from 25 to 30 per cent.

Ask for information and prices.

The Carriage You Are Looking For

Our No. 1 Size

CARRIAGE—Has three head blocks, as shown in cut, usually set 9 and 6 feet apart, will be placed any distance apart to suit purchaser. Knees open 38 in. from saw, and is fitted with Knight or Peel dogs, as desired. Taper movement on each knee. 1 15-16 in. steel set bar with steel pinions and coil spring receder, and friction lever brake for stopping knees where required. Timbers are 5 x 6 in., or heavier if desired, well bolted and braced. Diameter of truck wheel, 12 in. Axles 1 3/4 in. diameter, and extend clear across carriage, are furnished with self-oiling bearings. Front block is fitted with timber rule, placed as desired; 54 feet of V and flat track furnished with each carriage.

SET WORKS—As shown in cut, is made up of ratchet wheel 12 in. diameter, 4 in. face, with set lever carrying 7 steel pawls of varying lengths; also, same number of check pawls set in quadrant. Both sets of pawls are disengaged from either side of carriage when required to recede knees. This is a positive set, without lost motion.

FEED WORKS—As shown in cut, consists of 16 x 12 in. drum, with spur gear keyed to shaft. Pinion or friction shaft in saw frame engages with this gear. Cable takes two or three turns around drum, and is passed around end sheaves and attached to carriage. We also furnish 26 in. drum with internal gear in place of 16 in. drum when desired.

Palmer's "Moose Head Brand" Footwear

Why are they different from other packs?
Why are they better than other makes?

Here is the Answer:

We tan our own leather, and thus regulate class of hides to be used.

Plump, heavy packer steers are the only kind used in the tanning of our famous oil tanned "Skowhegan" waterproof leather.

Our leather is NOT plumped or filled.

We still adhere to our original special tanning process, in spite of the tremendous increase in cost of certain ingredients used, especially oils.

That's why our leather is right and our packs are made right. If YOU buy Palmer's Packs once, you will buy them always.

ATKINS^{STERLING}QUALITY^{SAWS}

Sterling Quality Steel— Atkins' Exclusive Formula

The most essential feature of a saw is the material used in the blade. It must be hard, so as to prevent the teeth from bending or dulling easily. It must be tough enough to withstand hard knots and obstructions. It must file and set readily to save the filer unnecessary time in refitting. Yet, it must not be brittle, or the teeth and points will break off in use or in refitting.

When we say that a blade is of Atkins high grade special steel, we mean that it measures up to these conditions in the highest possible degree.

The formula for the manufacture of this steel is our own exclusive property. The product is exceedingly smooth and close grained and is actually as fine in quality as the metal of your keen edged razor.

Atkins Saws prove their worth through the Sterling Quality of their steel. Always use ATKINS.

Prescott's Valve Controller

Patented June 8, 1915

The Machine You Have Been Waiting for.

To eliminate every trouble with your Steam Feed Valves install one of these machines.

Six Real Reasons for Doing So:

- 1—Gives the sawyer the easiest kind of control of valve.
- 2—Hand lever stays put, making them safe against any jerk or kick of valve.
- 3—Gives the sawyer every confidence in handling valve.
- 4—Will prevent accidents—is easier on the nerves and carriage runs steadier.
- 5—Water flowing into valves from foaming boilers does not fret the sawyer.
- 6—This relief from all troubles of which sawyers have complained enables them to give closer attention to the logs they are cutting and a better inspection of the lumber they produce.

Read what one of the largest lumber companies on the north shore has to say about it.

We are sole Canadian manufacturers of these machines.

Pamphlets with full description and prices on application.

Let us quote you also on our new "Hamilton" Vertical Steam Feed Valves.

WHAT IS IT ?

PRESCOTT'S VALVE CONTROLLER

Waubushene, Ont., Sept. 11, 1917.
Messrs. Wm. Hamilton Co.,
Peterborough, Ont.

Gentlemen:—

Replying to your inquiry re Prescott Valve Controller, which you sent us last spring to try out: I beg to say that we installed this machine early in April, just previous to starting the mills, selecting the most difficult valve we have to handle, the steam having to travel through nearly three hundred lineal feet of pipe to reach this valve, and noting the fact that the pipes are well covered, there is necessarily considerable condensation, and every sawyer knows the annoyance caused by water passing through the valves which violently jars or jerks the lever, sometimes wrenching it from the hand and thereby inflicting serious damage to the machinery of the mill. And now after nearly five months of daily use, I am pleased to tell you that this device has put up all that is claimed for it. There is not the slightest jar or vibration to be felt, no matter where the lever is held. It is very easily attached and does not interfere in any way with the free movement of the lever, and the Sawyer, Mr. George Botting, also our Foreman, Mr. W. A. Gill, both speak of your controller in the most glowing terms. I can, therefore, congratulate you on securing an article that will fill many a long felt want.

Yours truly,

(Signed) D. B. Anderson,
Chief Engineer,
The Georgian Bay Lumber Co., Ltd.

Packard Truck with rush order of lumber. From 85% to 95% of the live load is carried by the rear axle of the Packard—with less vibration and greater ease of handling

Can the Lumberman Lower His Handling Costs

THE modern lumberman is distinguished by his insistence upon accurate figures—not guesswork—in every department of his business.

Such things, for example, as the National Truck Cost System giving exact data as to truck performance.

A typical National Standard report on a Packard Truck over a six months' period, shows an average daily service of eight hours, with not an hour lost for repairs; an average daily

haul of 7000 feet of lumber and an average of 34 miles a day on the road.

Once the lumberman begins to get running costs on his truck, he knows which to keep and which to scrap—and what make of truck to put his money on in the future.

Here are some facts collected by the National Truck Owners Conference operating in 16 cities.

Packard Trucks show 10 per cent lower gasoline costs than any other.

They show 30 per cent lower repair costs than any other.

They show a lower wage cost per ton-mile transportation—make the trip in shorter time.

Ninety per cent of all truck owners who have used the System for a year or more and have compared the Packard with other trucks have standardized on Packard.

The Lumberman who wants to cut down his handling costs will see the bearing of these figures in his individual business.

“Ask the Man Who Owns One”

PACKARD MOTOR CAR COMPANY, Detroit

THE ROOFING OF TODAY

In fact, they have already arrived:

In 1918 we doubled our output of Asphalt Slates over 1917, and 1919 was double that of 1918.

There is going to be a big and growing business in Asphalt Slates done by lumber yards. We have a number of lumber dealers now who are handling our line and finding it a brisk seller and a good profit earner.

Brantford Asphalt Slates

You will find it quite easy to sell this fire-resistant, economical, durable roofing material at the same time you are selling the lumber for the house, barn or other buildings. Brantford Asphalt Slates are permitted to be used in the congested districts of cities where the most rigid fire protection by-laws are in force. This is an advantage that adds greatly to their saleability.

In addition to this, Brantford Asphalt Slates add beauty to a building. They are in soft, harmonious red and green shades—and the crushed slate surface gives a roof a distinct and artistic individuality.

Brantford Asphalt Slates are easily handled and quickly laid. They are in Individual size shingles.

Brantford Asphalt Slab Slates are four shingles in one. They are particularly suitable for large roofs, because they save time and labor in laying and require fewer nails. When laid the roof has the same appearance as when covered with the individual asphalt slates.

Brantford Crystal Roofing is the same material in Rolls. It is a big seller for barn roofs.

We suggest that you put in a small lot to try out the line. Lumber dealers who have done so have found that Asphalt Slates do not conflict with their regular business. Instead they have found that being able to supply the Asphalt Slates gets them extra business.

We would like to send you samples, prices and information.

Another Reason Why Huther Bros. Dado Heads Are Better

Our fifty years experience in the making of higher grade saws has shown us how to construct a Dado Head that will operate with comparatively little attention year in and year out.

The saw consists of two outside cutters and enough inside cutters to perform the required cut and is designed to facilitate the most intricate grooving.

The simple no screw adjustment makes it easy to operate.

Send for one on approval stating size required. You can return it at our expense if unsatisfactory.

WRITE US FOR ILLUSTRATED CATALOGUE.

Graton & Knight Standardized Series Leather Belting

Tanned by us for belting use

A Forty-Seven Year Belt

In the year 1872 a 24-inch G & K belt was placed on a waterwheel drive in a woolen mill in Pawtucket, R.I. For 33 years it did its work well. In 1903, the Plant was shut down and was not re-opened until 1907, when the Central Falls Mazda Lamp Division bought the property. Upon inspection, the wheel pit and part of the belt were covered with rubbish. After cleaning out the pit, they turned on the power. The belt picked up its load and has been carrying it ever since. This forty-seven year leather belt is proof positive of the quality of Graton & Knight tannage of leather. In 1872, as now, Graton & Knight were making the right belt for the work to be done.

FIRE BRICK

We make several brands of fire brick made by every known process of manufacture from a selection of various high grade Pennsylvania clays. This enables us to furnish the best adapted fire brick for your boilers, dutch ovens, refuse burners, kilns, etc.

We specialize in fire brick for power plants and if you will advise us whether your boilers are hand fired or stoker fired and kind of fuel used we can then give you the proper brick for your work.

We carry a large stock of our different brands in various sizes and shapes in our Hamilton warehouse, which enables us to ship at once.

We manufacture the following well-known brands:

**"Elkco Special," "Elk Steel,"
"St. Marys," "Keystone" and "Rotex"**

A Bell Locomotive

—will best meet your needs

We claim for this geared locomotive a 50% greater tractive capacity over any type direct connected locomotive of equal weight.

One man operates the Bell with ease. It runs on Kerosene, fuel oil, distillate or crude oil, minimizing fuel expenses. It is strongly built with each part interchangeable, all of which can be supplied promptly from our stock.

Tell us of your requirements and let us give you full particulars.

Sizes 2 to 24 Tons.

Saves fuel - Saves time - Saves horse flesh

LUMBERMEN'S

EQUIPMENT

Portable Saw Mills

THERE is one standing timber problem that has been considered more than ordinarily difficult to deal with, and that is the small or isolated tract, containing from half a million to several million feet. A more or less inaccessible location adds further difficulty to the problem.

It is out of the question to cut this timber and haul it to a mill at some central point, but it can be handled quite readily by adopting the other alternative, that of taking a mill to the timber, and the profit on such an operation will depend largely on the selection of the right type of mill, and the efficiency with which it is run.

For such an undertaking we have developed a portable mill which for capacity of output, strength of materials, and simplicity of design and operation we believe has no equal. The many expressions of satisfaction which we receive from customers strengthens this view. May we send you our catalogue?

Steel Carriages

**Over 450
Waterous
Carriages
Installed in
Canadian
Mills**

WATEROUS Steel Carriages are being used in the largest, best equipped Mills in Canada to-day. Built for fast cutting, for accuracy, and to give operating service, they are carefully put together of the best materials obtainable—they stay right.

Increase in cutting efficiency and the increase of cutting speed have been taken care of in the design of these carriages. Improvements in the knee and head blocks and in all moving parts to overcome lost motion; a new setworks—our No. 4—which may be attached to Steam Setter, or be replaced by trout Power set works) which absolutely prevents and will not develop slack; new style, inserted tooth; quick and easy operating dogs; a friction receder that is operated with the Setworks—these special features are what keep the Waterous Steel Carriage at its place at the head of the list of “Up-to-date Sawmill Equipment.” We build our Steel Carriages in sizes of 36 in. to 72 in. knee opening, in any length and with any number of head blocks—screw or rack motion. They are adaptable for rope or gunshot feed.

GARLOCK-WALKER List of Wood Working Machinery in Stock

Manufactured by

American Wood Working Machinery Co.

If you scan any Second Hand Machinery lists it is seldom you will find an "AMERICAN" machine on it, which is the finest kind of recommendation for the "AMERICAN" line.

THE GARLOCK-WALKER MACHINERY COMPANY have a few in their stock rooms as listed below. They are lucky to have them and you will be lucky to get them.

It is hard for us to make reasonable delivery on new machines these days. So if you want an "AMERICAN" machine of the type listed below don't be afraid to purchase it of GARLOCK-WALKER.

- | | |
|--|---|
| <p>1—AMERICAN FIG. 640, FOUR SIDED BOSS TIMBER SIZER, capacity 30" wide, 20" thick, 8 feed rolls, straight knives on all heads, only three years old, good as new.</p> <p>1—AMERICAN No. 229, FIG. 660, 9 x 6 HARDWOOD FLOORING MACHINE, equipped with six knife round top and bottom heads, knife setting and jointing attachments, thoroughly overhauled, in first class condition.</p> <p>1—AMERICAN No. 229, FIG. 660, 9 x 6 HARDWOOD FLOORING MACHINE, same as above.</p> <p>1—AMERICAN FIG. 8442, No. 26, 10" x 4" FOUR SIDED FAST FEED OUTSIDE MOULDER, with slip on and off top and bottom heads, latest type machine, complete, overhauled and in A1 condition.</p> <p>1—AMERICAN FIG. 8442, No. 26, 10" x 4" FOUR SIDED FAST FEED OUTSIDE MOULDER, same as above.</p> <p>1—AMERICAN FIG. 8442, No. 26, 10" x 4" FOUR SIDED FAST FEED OUTSIDE MOULDER, same as above.</p> <p>1—AMERICAN FIG. 8412, No. 22, 10" x 4" FOUR SIDED OUTSIDE MOULDER, in first class condition.</p> <p>1—AMERICAN FIG. 8521, No. 5, 8" x 4" HOUSTON FOUR SIDED OUTSIDE MOULDER, overhauled and in A1 condition.</p> <p>1—AMERICAN FIG. 8601, 6" x 4", FOUR SIDED OUTSIDE MOULDER, new.</p> <p>1—AMERICAN FIG. 5014, No. 111, 54" BALL BEARING BAND RESAW, carrying blades up to 7" wide, capacity 30" vertically using extended rolls, 22" without extended rolls; from 1/8" to 20" horizontally, will centre split a 16" timber; cut a veneer from 12" stock, rates of feed from 32 to 192 feet per minute; only three years old; in first class condition.</p> <p>1—AMERICAN FIG. 5859, No. 3 DOUBLE CUT-OFF SAW, capacity between saws 8" to 6' 9", 4" thick, 30" wide, equipped with two 16" saws and power adjustment to movable table; new machine.</p> <p>1—AMERICAN FIG. 5610, No. 25 EDGING AND RIPPING SAW, complete with countershaft; new machine.</p> <p>1—AMERICAN FIG. 541, No. 4 CIRCULAR RESAW, with 24" saw, in good working order.</p> | <p>1—AMERICAN FIG. 5701, No. 2 SELF-FEED CIRCULAR RIP SAW, capacity 25" wide, 6" thick, equipped with 14" saw and countershaft.</p> <p>1—AMERICAN FIG. 604, HEAVY SWING SAW, right hand to hang from ceiling, equipped with 48" saw and shield, almost new. 84 feet of ROLLER TABLE for use with above SWING SAW.</p> <p>1—AMERICAN FIG. 616, No. 7 1/2 COMBINATION SAW BENCH, with full set of gauges, without dado head, in first class condition.</p> <p>1—AMERICAN FIG. 6390, No. 1 DOUBLE ARBOR UNIVERSAL SAW BENCH, with tilting table, full set of rip, cross-cut and mitre gauges, including one 16" rip saw and one 16" cut-off saw, countershaft, in A1 condition.</p> <p>1—AMERICAN FIG. 6390, No. 1 DOUBLE ARBOR UNIVERSAL SAW BENCH, same as above.</p> <p>1—AMERICAN FIG. 575, No. 2 HAND FEED RIP SAW, with countershaft.</p> <p>1—AMERICAN FIG. 6312, CROSS-CUT SAW BENCH, movable saw operated by foot treadle, capacity 10 1/4" x 2 1/4", particularly adapted for cutting off crating stock; in A1 condition.</p> <p>1—AMERICAN FIG. 514, 36" BALL BEARING BAND SAW, with wire screen guards for top and bottom wheels; in first class condition.</p> <p>1—AMERICAN FIG. 824, 24" BUZZ PLANER, fitted with square cylinder, power feed attachment and countershaft; in A1 condition.</p> <p>1—AMERICAN FIG. 937, No. 1 SINGLE SPINDLE SHAPER, with plain countershaft; in first class condition.</p> <p>1—AMERICAN FIG. 1110, No. 6 DOUBLE DISC SANDER, 36" diameter discs; in first class condition.</p> <p>1—AMERICAN FIG. 1126, No. 9 UNIVERSAL KNIFE GRINDER, capacity for knives 31" long, two sided knife bar, one side fitted with clamps for holding thin high speed knives, one side slotted and fitted with bolts for holding ordinary thick knives; in A1 condition.</p> <p>1—AMERICAN FIG. 1127, No. 9 UNIVERSAL KNIFE GRINDER, same as above.</p> <p>1—AMERICAN FIG. 1145, No. 2 DOUBLE END EMERY GRINDER, bench type, complete with countershaft; in A1 condition.</p> |

The Present Shortage of Dry Lumber

**Red Pine
White Pine
Spruce
Hemlock
Hardwoods**

is creating a difficult situation and shows to what extent lumber has been demanded for the world's urgent re-building requirements. Output has fallen short of demand and stock must be accumulated again in still bigger quantities to get back to a steady and continuous supply of dry lumber. Only those who are best informed as to available stock and are in close touch with sources of supply can fill requirements under existing conditions.

Send us your inquiries as we have a good assorted stock and will be glad to quote you our best prices.

True Blue Service

WE are constantly striving to give our customers the greatest possible service—as our big Service Yard at Logansport indicates.

Furthermore, we sell only high quality lumber—for quality products are always best.

This service and quality are very real. They must be, because it is with them that we assure satisfaction. And every single one of our customers must be satisfied.

You will find it to your advantage to buy hardwood backed up by such service and of such quality that satisfaction is a foregone conclusion. And it is—when you buy of us.

Phone: **Harrison 8610-8611**

Yards: _____ **Cairo, Ill.**

We all know that prices on lumber are high. What is the cause of it? Mostly lack of production on account of labor conditions caused by the war. Labor has not come back to its usual high class standard and on account of the high wages paid, less work is done by every man, so that the production of lumber in 1919 was 35% below the 1914 production, adding the normal increase of production of 5% a year; while, on the other hand, the consumption of lumber on account of the almost stand still of building during the war, has increased enormously.

There is no chance for lumber production to catch up this year and therefore, prices will continue high. We, therefore, advise you to buy lumber as you need it, without regard to price; and as no doubt, you only buy when you want it, you want to buy it from people who can deliver the lumber to you promptly. We can do this as we have over two million feet of CYPRESS in our Cairo yard and can ship it at a week's notice. Besides, we have large stocks in the south and cars in transit at all times that can be diverted to you.

When you want CYPRESS—which is the best value of lumber today, send us an order. We will fill it promptly.

WE ARE THE CYPRESS SPECIALISTS

Palmer's "Moose Head Brand" Footwear

Why are they different from other packs?
Why are they better than other makes?

Here is the Answer:

We tan our own leather, and thus regulate class of hides to be used.

Plump, heavy packer steers are the only kind used in the tanning of our famous oil tanned "Skowhegan" waterproof leather.

Our leather is NOT plumped or filled.

We still adhere to our original special tanning process, in spite of the tremendous increase in cost of certain ingredients used, especially oils.

That's why our leather is right and our packs are made right. If YOU buy Palmer's Packs once, you will buy them always.

Two Positions Open!

A Client—Large Eastern Wholesale Lumber Firm—Needs Two Right Kind of Men

The two men this client needs are in steady employment somewhere today. Perhaps they are confronted with no future—perhaps they, victims of circumstances, are surrounded by conditions that are not the most congenial. At any rate—we believe that the two men desired must be working because our client is only in need of good men—and no good men are out of employment.

If this applies to you—if you frankly believe way down deep in your heart that you are ready—are willing—in fact, desire to eventually be offered an opportunity whereby you can become—some time—a part owner through assistance given by this long established firm—then you must possess the following qualifications:

First, you must have a fair knowledge of the lumber business in general. You must know the qualities and sales values of your product on sight. You must be able to buy and sell lumber under every condition. You must be able to turn a profit by your cleverness.

You must be a business man through and through—must have personality—ability—aggressiveness, and must be a good mixer. You will have times when hours are long and work is hard. You will be confronted by problems that only the keenest of judgment can settle.

If you are "our" man—write today. An appointment will be made upon receipt of your letter.

Single copies 15 cents.

"The Canada Lumberman and Woodworker" is published in the interest of, and reaches regularly, persons engaged in the lumber, woodworking and allied industries in every part of Canada. It aims at giving full and timely information on all subjects touching these interests, and invites free discussion by its readers.

Advertisers will receive careful attention and liberal treatment. For manufacturing and supply firms wishing to bring their goods to the attention of owners and operators of saw and planing mills, woodworking factories, pulp mills, etc., "The Canada Lumberman and Woodworker" is undoubtedly the most direct and profitable advertising medium. Special attention is directed to the "Wanted" and "For Sale" advertisements.

Authorized by the Postmaster-General for Canada, for transmission as second-class matter.

Entered as second-class matter July 18th, 1914, at the Postoffice, at Buffalo, N. Y., under the Act of Congress of March 3rd, 1879.

Vol. 40

Toronto, April 1, 1920

No. 7

The Economic Law Still Prevails

Several Western representatives had a conference at Ottawa recently with the acting Prime Minister in regard to the present prices and shortage of lumber supplies. The question was discussed from every angle and all standpoints in a vain endeavor to find some feasible way out of the dilemma. While many proposals were made, some theoretic, speculative, fantastic or visionary, it was found that none would fully meet the situation. It was averred that, while prices had gone up in many instances, the corresponding increase in the cost of production was not as great. On the other hand, little was said in this connection about demand and the constantly increasing clamor for wood products of all kinds.

Some members suggested that the government should assist financially small sawmill operators; others that an embargo should be placed on export; a few that a thorough investigation should be held in the selling prices, operating costs, etc., and still others that the prices should be stabilized by a federal decree, all of which were regarded as ineffective, shortsighted and unsatisfactory.

Two or three years ago, when British Columbia mills had a great over-production, they urged upon their customers in the West to buy instead of waiting for a decline in prices, but such admonition was not heeded. It was only when values started to ascend that purchasers got busy and all rushed in at once, with the result that competition forced up quotations, and yet certain onlookers profess to consider why?

It has been asked if at the bottom of all these agitations for lower prices, human selfishness and greed do not play a salient part. This waiting for prices to sag, for the slump to come or the bottom to fall out of things, has been counted upon once too often. The expected day has not arrived, and when it will arrive, no one can tell. From reliable sources and on the most authentic information, it may be stated that unless there is a radical change in financial, industrial

and labor conditions and activities, there will be no decline for at least two years, perhaps longer. No one can foretell the future, and he who has been putting off construction work in the hope that a better era will dawn, is much like the fellow who never goes to work but is hanging around waiting for his ship to come in.

While lumber may be high in price, the increase, except on one or two lines, has been nothing like that witnessed in footwear, clothing, hats, sugar, butter, flour, and many other commodities that strike the average individual more acutely than the lumber industry. In any attempt to readjust values in these articles that the Board of Commerce made the outcome has been "the worst is yet to come." This is an evidence that artificial interference, federal intermeddling and arbitrary methods only aggravate rather than appease, which is another way of saying that supply and demand will always be the regulator of prices. Like most lessons, this is difficult to learn, but, like the law of nature, this economic axiom cannot be lightly set aside. It demands obedience and is as old as civilization itself.

Little Things That Play a Big Part

The cost of lumber has been receiving considerable attention of late and every now and then is heard the query—"When will prices descend?" The average citizen, who is not a contractor or who does not consume lumber in any large quantities, needs enlightenment on the question of production, distribution and operating expenses. It is gratifying to learn that not only are the lumbermen's associations undertaking to furnish any legitimate facts that may be required, but that representative members of the industry are doing all in their power to present information on this problem. In doing so they are not acting in sordid self-interest or in a spirit of defiance, but with the desire to make known some contributing factors which the average layman does not stop to ponder over.

To the ordinary man on the street a tree is a tree, and the fact that it is so, has not resulted in any development of cost to it during the past five or six years. He can, therefore, see only one angle of the lumber question, and that is: labor costs more than in pre-war days, and this is the only advance that should legitimately take place in the quotations of forest products. The tree is there and it has stood throughout all these years, and its growth has entailed little or no disbursement.

There are so many phases that enter into the subject that when they are presented by a lumberman his hearers are amazed. They forget that labor has to be fed; that the cost of supplies was never so high; that stumpage is increasing all the while; that mill equipment and driving tools are constantly ascending in price; that insurance, freight, logging locomotives, steel rails and a score of other things enter into the question of growing expenditures, not to speak of the longer distances that timber has to be hauled or driven; how the sources of supply are constantly receding until many plants are now over the height of land; the general inefficiency of labor; the abnormal calls that are made upon the lumber industry which has been focused by the sudden and unprecedented cry for houses, the construction of which has been practically at a standstill for years, etc. Unthinking ones have come to the conclusion that automatically the mills of Canada and the United States should be able to meet instant any exactions of the masses.

On top of this abnormal domiciling demand have come requisitions unheard of, particularly in the line of hardwoods, for the production of phonographs, and for millions of automobiles, which will consume billions of feet of hardwood lumber. Then, Russia has ceased to furnish its quota of timber for European requirements, and still people are amazed that lumber should go up in price.

In a particularly logical and trenchant address before the Electric Club recently in Toronto, Mr. A. E. Clark, who can always be depended upon to say something worth while, remarked that for every thousand feet of lumber which was purchased to-day, there were at least ten gentlemen waiting for it. Naturally this increased the price, and the only solution of the present problem was augmented production. He further stated that lumber, being a large commodity, was referred to as having gone up enormously in cost,

whereas, contrasted with other articles, the advance had not been nearly as great. Lumber, Mr. Clark added, was one of the last commodities to ascend, and in order to correct misapprehensions in the public mind, he pointed out for purposes of illustration that instead of quoting lumber at \$50 per thousand its sale price might be spoken of as 5c per foot. Say it is selling now at \$80 or \$90 per thousand, which is the same as 8c or 9c per foot. In other words, by the foot, lumber had increased, say, from 5c to 9c, while on the other hand, sugar has gone up from 4c to 18c per pound, and yet the price of sugar touched more individuals than did lumber.

As has been frequently emphasized, greater production is the only practical remedy for the present-day shortage. When supply will catch up with demand, will depend largely upon industrial conditions, the attitude of labor, the thrift and purpose of the people as a whole and many other factors to which unthinking ones give too meagre consideration.

Placing Incorporations on Sounder Basis

The number of new companies which are being incorporated, both federally and provincially, is increasing each week. During the war there were not so many organizations launched, but since the days of peace, they have been multiplying. Pretty nearly every title on earth, sky or air, has been appropriated for some of these concerns, and never did so many lawyers, accountants, clerks, bookkeepers, stenographers, etc., have their names in print. This may be a source of gratification to some stenographers who have their cognomens set forth in the Canada Gazette, the Ontario Gazette, the Quebec Gazette and other provincial publications. It is very nice to read that Catherine Matilda Brown and Nancy Jane Smith and Florence Victoria Green and James Herbert Gray and Robert Lewis Black are all directors of some new company which has a high-sounding name and a larger or smaller capitalization. They are, however, provisional directors that nobody can locate, or who possibly do not know that the nomenclatures have been used in connection with the incorporation.

The whole thing is so formal, meaningless and irresponsible that the custom of having such names included in companies was brought up before the Parliamentary Committee on Banking and Commerce at Ottawa at its first meeting held recently.

Just why the names of "dummy" directors should be substituted for those of bona fide directors, has never been satisfactorily explained except on the plea of convenience, pending the election of executive officers, etc. To many outsiders it seems that the use of such cognomens is a mere camouflage or subterfuge that should cease. Certain members of the Banking Committee went so far as to urge that it might be advisable in most cases to refuse charters where the names of stenographers, accountants, clerks and bookkeepers appear, on the ground that the proposed projects are not sound. It is gratifying to learn that the practice is going to be discouraged to every possible extent.

Pleasing it is to record that some progress has at last been made in legislative circles in a matter to which the "Canada Lumberman" and many other papers have called attention for a long period. Provincial and federal charters are too easily obtained, the cost is comparatively small and ostensibly a limited liability company with a great big capitalization can be started on a shoe string and a category of names. It need have no habitation, or fixed place of abode and is as impervious to the light as a dungeon in some mediaeval castle. No one can locate who are at the back of such enterprises. They have no definite purpose, policy or personnel, and one wonders why they have been organized.

Nearly every week there are scores of such companies incorporated. This applies to the lumber line, the pulp and paper line, export and other activities, and one often wonders why charters have been granted these concerns. They never appear to operate, and frequently are never heard of again after their names have appeared in the official Gazettes. Just why they came into being is a perplex-

ing problem. If letters are sent to the supposed head office of these federations, they are returned on the ground that they are not known or the postmaster asks for the street address and number, which it is impossible to give.

In connection with companies securing letters patent it has been suggested that reforms should go even further than naming bona fide directors and should include a definite street address, together with the name of the president, secretary or managing director. There are many outside firms anxious to do business with newly-formed companies. As stated in the "Canada Lumberman" of nearly a year ago, the sooner the joint stock company legislation of Canada, as well as the postal laws, compel each new organization to give the names of genuine directors, to have a fixed location, where they can be discovered by the public or those anxious to get in touch with them to do a legitimate business, the better it will be all around. In the interest of sound finance, reputable business and undertakings of integrity and merit, such a step cannot be taken too speedily.

These are the days of "invention," particularly when it comes to plausible pleas for the lumberjack jumping his job. The story is vouched for by a representative operator who recently returned from the north, that a discontented woodsman left the other day on a novel plea. When asked by the foreman if it was the wages or the work which was the cause of his sudden departure, he answered "No." Further pressed for an excuse, he said "It was the cook." The foreman next asked him if anything was wrong with the bread, pies or the meat, and the response was "No." "What is the real trouble, then?" enquired the boss. "Is it the cakes?" "Yes," was the sullen answer. "They may be fresh and nice, but look at the shape of the goll darned things. I would not eat 'em on a bet," and with this thought uppermost in his mind, he departed for pastures new.

In regard to the proposed increase of railway rates, of which so much has been heard, a leading lumberman says that advances nowadays seem to be like the poor—always with us. With the Canadian Pacific Railway showing earnings for 1919 of 10.80 per cent., there does not appear to be any immediate need for an increase in freight rates. He presumes the government will decide that the \$30,000,000 a year deficit on the Canadian National Railways et al will have to come out of the shippers of freight throughout the Dominion, but unless provision is made that any excess earnings of the C. P. R. are to go to the government, many persons do not see that there is any necessity to make the people pay for bad judgment on the part of their parliamentary representatives.

John B. Reid, of Toronto, who was recently elected president of the Ontario Retail Lumber Dealers' Association, has been identified with the industry for over forty years, says the "Financial Post," of Toronto. He is one of the biggest boosters for co-operation and what he terms the forward movement in the lumber ranks. Through his activity, along with that of a few others, the Lumbermen's Section of the Toronto Board of Trade was organized three years ago and is now one of the most effective departments of that institution, being influential enough to elect annually a representative on the council and also on the Canadian National Exhibition Board. Mr. Reid served as chairman of the Lumbermen's Section for two terms and also on the Exhibition board. Possessing a genial disposition and cheerful nature he is naturally proud of the progress of the organization of the lumber retailers of Ontario, who, although the association has been in existence only two years, now has a membership of over one hundred and sixty. The business methods, service and calling of the members have been elevated, while there are seven district branches in the Province. Some of Mr. Reid's maxims are:—"Live and let live;" "There is business for the other fellow as well as yourself;" "Life is larger than the dollar," and "The friendship and confidence of your fellow-men are of far more value and worth than the piling up of wealth."

Accidents in Lumber Industry are Numerous

Record For Past Year in Ontario Unfavorable in Logging and Sawing—Total Cost Amounts to \$414,363.63—Analysis of Situation and Causes

By S. Price, Toronto, Chairman of Workingmen's Compensation Board

During 1919 about 45,000 accidents were dealt with in all the industries covered by the Workmen's Compensation Act, and about \$4,200,000 being awarded in benefits, being an average of \$14,000 a day. About 3,000 pieces of mail, in and out, are handled each day by the Board, the number of cheques issued daily being about 450. More than 100,000 people during the year were depending more less on these payments for their support.

Five or six years ago when an accident happened to a workman there was no provision, except in a few cases, by which he or his family could claim anything for the loss entailed. The crippled workman or the bereaved widow and children were left to shift for themselves or to depend upon charity for support, and perhaps to become an unwilling charge upon the municipality. The exceptional cases in which recovery could be made by law were the cases in which the employer could be held responsible for the accident by reason of negligence or breach of duty. The question of liability was settled by action in the law courts. The procedure was full of technicalities. Professional experts were required to handle the case. Appeal might follow appeal, and cases sometimes lasted for years. It might mean ruin to the employer, and if he was not financially good the workman or his widow get nothing, or if recovery was made the costs ate up a very large part of what was recovered.

The employer might get limited protection by obtaining liability insurance. This gave him partial indemnity but not immunity from action. Statistics collected in the United States show that less than 25 per cent. of the premiums paid by employers under the old liability insurance actually reached the hands of the injured workmen or their dependants. The rest was consumed in profits and expenses and costs of litigation.

The New Way—How It Works

Things are done differently now. Under the present Act the workman and his dependants are better looked after. In the industries covered all accidents causing material loss to the workman are compensated. Litigation and expense are eliminated. Payments are made expeditiously, and the money is put directly into the hands of the workman or his dependants. Death or serious disabilities are compensated in the form of pensions so that the beneficiary will be sure of continued support, lump sums often unwisely invested or frittered away. All necessary medical, surgical, hospital, and skilled nursing services are now provided for the injured workman. Instead of less than 25 per cent. of what the employers pay reaching the workman or his dependants over 98 per cent. now goes directly for this purpose. The employer is not only immune from expense and litigation but also from individual liability, provided he reports his pay roll and pays his assessment to the Board.

Ontario, though not the first, was one of the earliest places to adopt the new collective liability system, and in many respects the Ontario Act is the most progressive of any. Nova Scotia, British Columbia, Alberta and New Brunswick have followed the same principle. Manitoba adopted the individual liability and private insurance plan, but a proposal to change to collective liability is now before the Legislature.

Figures For Lumbering Operations

One of the largest classes of industry under this system of law is the lumbering industry, coming now, since munition manufacturing has ceased, next to mining in number of workmen and amount of compensation and assessments. During the first four years of the operation of the present Act the accident experience in the lumbering industry in Ontario as compared with other places was exceedingly good, resulting in a very low rate of assessment. It is to be regretted that 1919 shows a sharp departure from this favorable record, the accident cost showing a very large increase. The total cost for 1919, including estimates, was \$414,363.63, as against \$229,716.61 for 1918.

The following table gives the provisional figures for the year 1919:

	Assessment	Accident Cost	Balance
Logging	\$131,437.48	\$171,412.84	\$ 39,975.36
Saw Mills	124,552.84	223,311.88	98,759.04
Mixed operations, pay roll			
under \$10,000	14,968.66	19,638.91	4,670.25
Totals	\$270,958.98	\$414,363.63	\$143,404.65

The deficit will be reduced by a balance of \$11,800.86 carried forward from previous years, but there will still be a large deficiency which will have to be made up by a retroactive increase of assessments. It will be observed that the experience in both saw mills and logging is bad, but that it is considerably worse in the saw mills than in the logging.

Why Accidents Have Increased

Various explanations have been suggested for the large increase in accidents and accident cost. One is the large proportion of inexperienced help that had to be used, a good deal of it foreign; other reasons given are the careless attitude of a great many workmen following the war, and the present social and industrial unrest. The same trend, however, is not generally observed in other lines of industry, the experience for the year in industries as a whole being about the average.

It must, therefore, be left to those engaged in the lumbering industry to discover if possible the cause of the bad experience in that industry during the past year, and if possible apply a remedy. The Board has now made arrangements by which particulars of all compensable accidents are being sent from time to time to the Lumbermen's Safety Association, and the Safety Inspector will thus have a better opportunity of keeping in touch with what is happening in the industry and suggesting preventative measures.

The wage expenditure in the lumbering industry in Ontario during 1919 was about \$19,806,857.81, and the number of full year workers 16,930. As many of the men work only a portion of the year the total number of workmen employed would very considerably exceed this figure.

It may be interesting to note that in the industries covered by the Act the average weekly wage in accident cases rose from \$13.27 in 1915 to about \$24.80 in 1919.

A comparison of the logging and saw mill rates with those prevailing in other places will show very favorable rates hitherto prevailing in this Province.

	Ontario	Scotia	Nova Manitoba	Ohio	Michigan	New York
Logging	\$1.20	3.00	2.75	2.50	7.52	8.74
Saw mills	1.60	3.00	2.75	3.85	7.89	9.17

A very material increase will now, however, have to be made.

A few examples of accidents that occurred in the industry in 1919, how they happened, and what compensation was awarded, may be instructive.

Claim 129383. A boom man was unloading logs from the cars into the water when the logs rolled upon him, causing injuries from which he died the same day. His widow was awarded \$30 a month until death or remarriage and \$7.50 a month for each of three children while under sixteen. The capitalized value of the pensions was \$6,385. \$75 was paid for funeral expenses.

Claim 118825. A mill hand was putting a board in the edger before the previous one was through and it came back, striking him in the abdomen, and causing injuries from which he died next day. He left a widow and six children under sixteen. The widow receives \$60 a month for herself and children. \$75 was paid for funeral expenses and \$21 for doctors' bills. The capitalized value of the pension is \$7,928, making the total cost of the accident \$8,024.

Claim 118562. A tailing edger in a lath mill was resting his right arm on swing shaft on which press rolls swing when his arm slipped off and got caught in the saws, causing loss of the arm. He was paid \$9.90 a week for 16 weeks while unable to work, and was awarded for permanent disability \$150 cash and a pension of \$25.50 a month for life. The capitalized value of the pension was \$5,325. Doctor and hospital bills amounting to \$90.50 were also paid.

The Delusion of Net Annual Forest Growth

Canadians Have Been Fooling Themselves With Regard to the Question of Yearly Accretion—Some Plain Facts Presented on Wood Wastage

Frank J. D. Barnjum, of Annapolis Royal, N.S., who has devoted much study, thought and investigation to the diminishing pulpwood and general timber resources of Canada, and particularly those in the East, has recently contributed some valuable information on the subject of "Delusion of a Net Annual Growth in Our Forests." Mr. Barnjum is directing timely attention to certain phases of a situation that should be made known in connection with our national forests. Recently he wrote the Boston Sunday Post in a manner so convincing as to leave no doubt of his attitude on the present need of more progressive forestry methods and perpetuation. He laid emphasis on some statements already published in the "Canada Lumberman." The Boston paper ventured to offer a mild criticism of Mr. Barnjum, and the response of the latter will be read with particular interest at this juncture, when organizations of every kind are devoting more attention than ever to the problems of greater production, thrift, conservation, scientific management and national economy. Mr. Barnjum, in part, says:

Now, with regard to the question of an annual growth in timberlands, in which this critic thinks my viewpoint extreme, and says he knows there is a net annual growth because he has watched it on his own holdings, I think I can show conclusively that there is not any net growth, by simply stating a few cold facts that will not down by a mere assertion to the contrary.

A Century Between Growths

In considering this question of growth in our natural, or, rather, unnatural forests, as they exist on this continent to-day, we have to figure not on some individual stand or township, where conditions may be abnormal or unusually favorable, but on a state or the country as a whole, and in cycles of 100 years, as the average spruce tree as harvested will run but little short of the century mark. I am perfectly willing to acknowledge that there is a growth to every living tree that has not passed maturity, has not blown down, or has not been killed by fire or some species of the hundred and one different bugs. I also admit that there is a combined net growth in some sections of a township and, in rare instances, in possibly a whole township. But to offset this growth, as there must be a debit as well as a credit side, we much charge off the wastage.

We will take the State of Maine for one example, as it is the most important wood-producing section in the eastern United States. Now, if you will refer to the cruiser's map of almost any township, you will find a dotted path, in many instances running clear across the town, of numerous varying widths up to a mile or more, marked with the significant and familiar words "Blow-down" or "Wind-fall," which means that the timber in that designated section has been destroyed by wind.

The next most familiar word is "Burn," and quite often there may be two or three or more sections of a township that have been burned, running in size all the way from 50 acres up to 4,000 or 5,000. and, in some cases, half or three-quarters of the township, to even, in the case of the Miramichi fire which swept across Maine, a burned area of more than three million acres. I can think of at least one fire in Maine, which occurred about 1903, which burned 100,000 acres, while another fire, in 1909, in the same State, burned over 45,000 acres, and these are merely two examples.

In addition to the large, well-defined areas of fire and wind destruction, there is a continual dropping by wind of a tree here and a tree there. This is going on all the time, and when you realize that it is only necessary to lose one tree per acre per year, varying in size from 5 inches to 12 inches in diameter, according to location and consequent rate of growth, to wipe out the entire growth by this one source of loss alone, and when you add to this the heavy losses from the large wind-falls, fire and bugs, you do not have to stretch the imagination very much to realize that not only is your growth increment wiped out, but also quite a little of your principal as well. For this reason, the thought uppermost in my mind is to try to arrive at a figure that will approximate what this net loss really is.

Worms Destroy Tremendous Areas

When I attempt to estimate the wastage caused by the spruce budworm, I was somewhat staggered. The most conservative figure I have heard for Maine is that 25 per cent., with a high figure of 60 per cent., of all the fir growth in the State has been killed, with considerable spruce destruction as well, and New Brunswick's loss runs up to 75 per cent., and Quebec's up to 40 per cent. And when

we realize that this is at least the third attack within the past century that we have had by this one pest, we can form some slight idea of what the wastage from this source must be.

I have in mind a windfall in Wisconsin, between Prentice Junction and Ladysmith, that covers a strip five miles wide and 50 miles long, where the timber was laid as flat as if traversed by a steam-roller. All of this timber, the result of more than 200 years' accretion, was destroyed in an hour. I cannot help thinking of an experience of my own in my earlier days, in this connection. I had been planting 10,000 trees per year for two or three years, when a fire came in on an adjoining lot and burned up more trees in two hours than I had planted in the three years, which discouraged any more planting by me at that time.

But the final and most convincing figures of all are contained in the valuable report by the committee of the Society of American Foresters, which was recently published, which says:

"That of all the total forest area in the United States of \$500,000,000 acres:

"One hundred million acres and more are so devastated as to be almost wholly non-productive:

"Over 250,000,000 acres have been cut over and more or less damaged by fire, but are producing new timber, usually in small amounts:

"One hundred and fifty million acres are in standing timber where growth merely balances decay, with no net increase in wood production from year to year. On a large part of this area the virgin timber is of poor quality and very inaccessible."

Half Timber Lost by Fire

In Canada, the Canadian Forestry Association states, one-half of the forested area has been burned over within the past 100 years. That this enormous wastage by fire is still with us is in evidence by the loss of 1,000,000,000 feet of timber in Montana and the 540,000 acres destroyed in Alberta, which are only two of the larger burns of last summer. The bugs are also still with us; and the wind, as one of my own countrymen says, "She blow all de time."

Now, with all this wastage above enumerated, it does not take a forester or a woodsman, but any man of ordinary intelligence to figure out that there is not only no annual growth to be counted on in the country or a state as a whole, but that there must be quite a net annual loss in addition. We have been simply fooling ourselves with regard to this question of annual accretion. I was myself a victim of this delusion up to three years ago, when I found a very large area which we had made preparations to log had all been logged for us by the wind over night. This so impressed me that I began figuring up this forest wastage, and the deeper I go into it the bigger it grows.

The vast amount of money that has been made and will be made in timberlands is not because of the growth of timber, but because of the great enhancement in values consequent upon the rapidly diminishing supplies.

Now, when you come to the destruction caused by the axe, and take figures compiled from the United States forest service statistics, which amount to 244,000,000 cords of wood of all kinds, including fuel wood, harvested in the United States per annum, if this were piled in a solid pile four feet high and four feet wide it would reach a distance of 369,000 miles, or 123 times across this continent, or more than 15 times around the globe.

In considering these appalling figures it would seem to me that it is now time to cease imitating the ostrich, and to begin to look this question of a rapidly vanishing timber supply on both sides of the line squarely in the face, and see where we are heading before it is too late; for a treeless continent is unthinkable.

Instead of being "extreme" in my statements I have always been much too conservative, as I have never yet made a statement or prediction in connection with timberlands that has not proved under rather than over the mark. With the exception of the item in the financial paper above referred to, I have not received a single criticism of my article, although I have received scores of letters commending it from all over the country and from the very highest authorities—from men who have blazed the trail in this splendid work, and whose names would be enrolled in the Hall of Fame if I could have the selection. So it would hardly seem that my viewpoint is considered extreme by those in a position to know the facts.

Many Topics Discussed by the Wholesalers

Questions of Minimum Weights, Claims Against Railways, Stabilizing Prices, Operating Expenses and Milling in Transit Situation Considered

The Wholesale Lumber Dealers' Association, Inc., held their regular monthly meeting at the Albany Club on March 19. There was a large attendance of members and the proceedings were, as usual, of much interest and value. Mr. A. C. Manbert, chairman of the association, presided and there were present, in addition to members of the association, Mr. D. A. Cameron, manager of the Canadian Bank of Commerce, Toronto, and Mr. L. B. Beale, His Majesty's Trade Commissioner for Western Canada. Several matters of routine were disposed of before the chief items on the program were taken up.

Mr. A. E. Eckardt, chairman of the committee on transportation, presented a progress report in connection with certain important inquiries which the committee is making into the problem of claims against railway companies. A short discussion took place in regard to the Board of Commerce order regarding the cost and selling price of building materials and some of the members expressed their views in regard to the manner in which this order should be dealt with.

On the invitation of the National Wholesale Lumber Dealers' Association, Messrs. C. W. Wilkinson of the Union Lumber Co., Toronto, and Horace Boulton, secretary of the Wholesale Lumber Dealers' Association, Inc., were appointed to represent the Association at the annual meeting of the National Wholesale Lumber Dealers' Association at Washington, D.C., on March 24 and 25. Several other members of the association will also be present at the convention as they are also members of the National Wholesale Association.

Obviating Difficulties With Railways

A motion was carried expressing appreciation of a motion forwarded by the Ontario Retail Lumber Dealers' Association who offered co-operation with the wholesalers in connection with any efforts the latter may be making with a view to removing the present difficulties when claims are made against railway companies for overweight charges, etc.

Mr. A. E. Eckardt, at the suggestion of the chairman reported the steps recently taken by the Weyerhaeuser Company in connection with a campaign for stabilizing lumber prices. The matter was subsequently made the subject of a very interesting general discussion regarding market conditions.

Mr. L. B. Beale, His Majesty's Trade Commissioner for Western Canada, in a brief address, referred to the encouraging manner in which Great Britain is "coming back" after the war. During the first twelve months following cessation of hostilities, he said, Great Britain had exported in value more than 59% in excess of her 1918 exports; and, what was perhaps more remarkable still, her 1919 exports were 52% greater than those of 1913.

Mr. D. A. Cameron, manager of the Canadian Bank of Commerce, in his address on "Exchange" gave the lumbermen a brief and exceptionally instructive and clear explanation of the way in which the export and import of all kinds of commodities, including gold and credit documents, affect the price of one country's funds in another country, showing that the price of exchange was a remarkable barometer of the actual condition of trade balances between the people of the two countries.

Unrest In Northern Lumber Camps

Mr. W. E. Bigwood was called upon by the chairman to report upon conditions in Northern Ontario. Mr. Bigwood had just returned after spending the winter in the north, and stated that operating conditions had been exceptionally fine, both as regards weather and snow, and even in regard to the labor supply. Unfortunately however, while the supply of labor had been fairly plentiful, it had been practically impossible to stabilize the men. Unrest existed all through the northern section, and undoubtedly would continue during the spring. In former years it was customary to engage men in the summer and fall and state the wage for the whole winter. This year, however, there had been no set wage. They had started the winter paying \$40 to \$50 per month and now they were paying \$70 or \$75 per month. The present indications were that these figures would carry forward into the spring in connection with the manufacturing operations. This was the most troublesome feature they were likely to experience during the summer. The One Big Union were very active at the present time. They had tried to spread their

propaganda throughout the camps during the winter, but had not succeeded very well. They had now established their organization at Sudbury, and also at the Soo. What this meant he could not exactly say. Some operators believed, however, that it would have a material bearing upon the lumber operations. If there was plenty of labor this year he did not think they would feel the effects of the One Big Union very much. The cost of supplies was also quite a serious matter. All the lines of supplies which they used chiefly were advancing materially in price.

So far as the supply of logs was concerned, he thought that all lumbermen in the northern country had done very well this winter, better even than they had expected. Some were even so located that they would have a spring cut. The present indications were that driving conditions would be good. He believed they could all make their plans in the expectation that there would be a normal supply of logs for this year's operations.

Major Hartt, ex M.P.P., Orillia, who recently joined the staff of the Fresserton Timber Co., Toronto, also spoke on operating conditions, substantiating all that Mr. Bigwood had said and adding a vigorous reference to the timber situation in Northern Ontario. He urged the members to impress upon the government of Ontario the necessity for efficient and thorough reforestation methods.

Mr. D. C. Johnston brought up a discussion upon the milling in transit situation, in connection with which difficulty had recently arisen when an embargo had been placed upon certain lines for export. Stock stopped off at an Ontario point for milling in transit had been subjected to embargo, even though the original shipment to the milling point was started previous to the placing of the embargo. This matter was left in the hands of the Transportation Committee to investigate with a view to reporting at the next meeting.

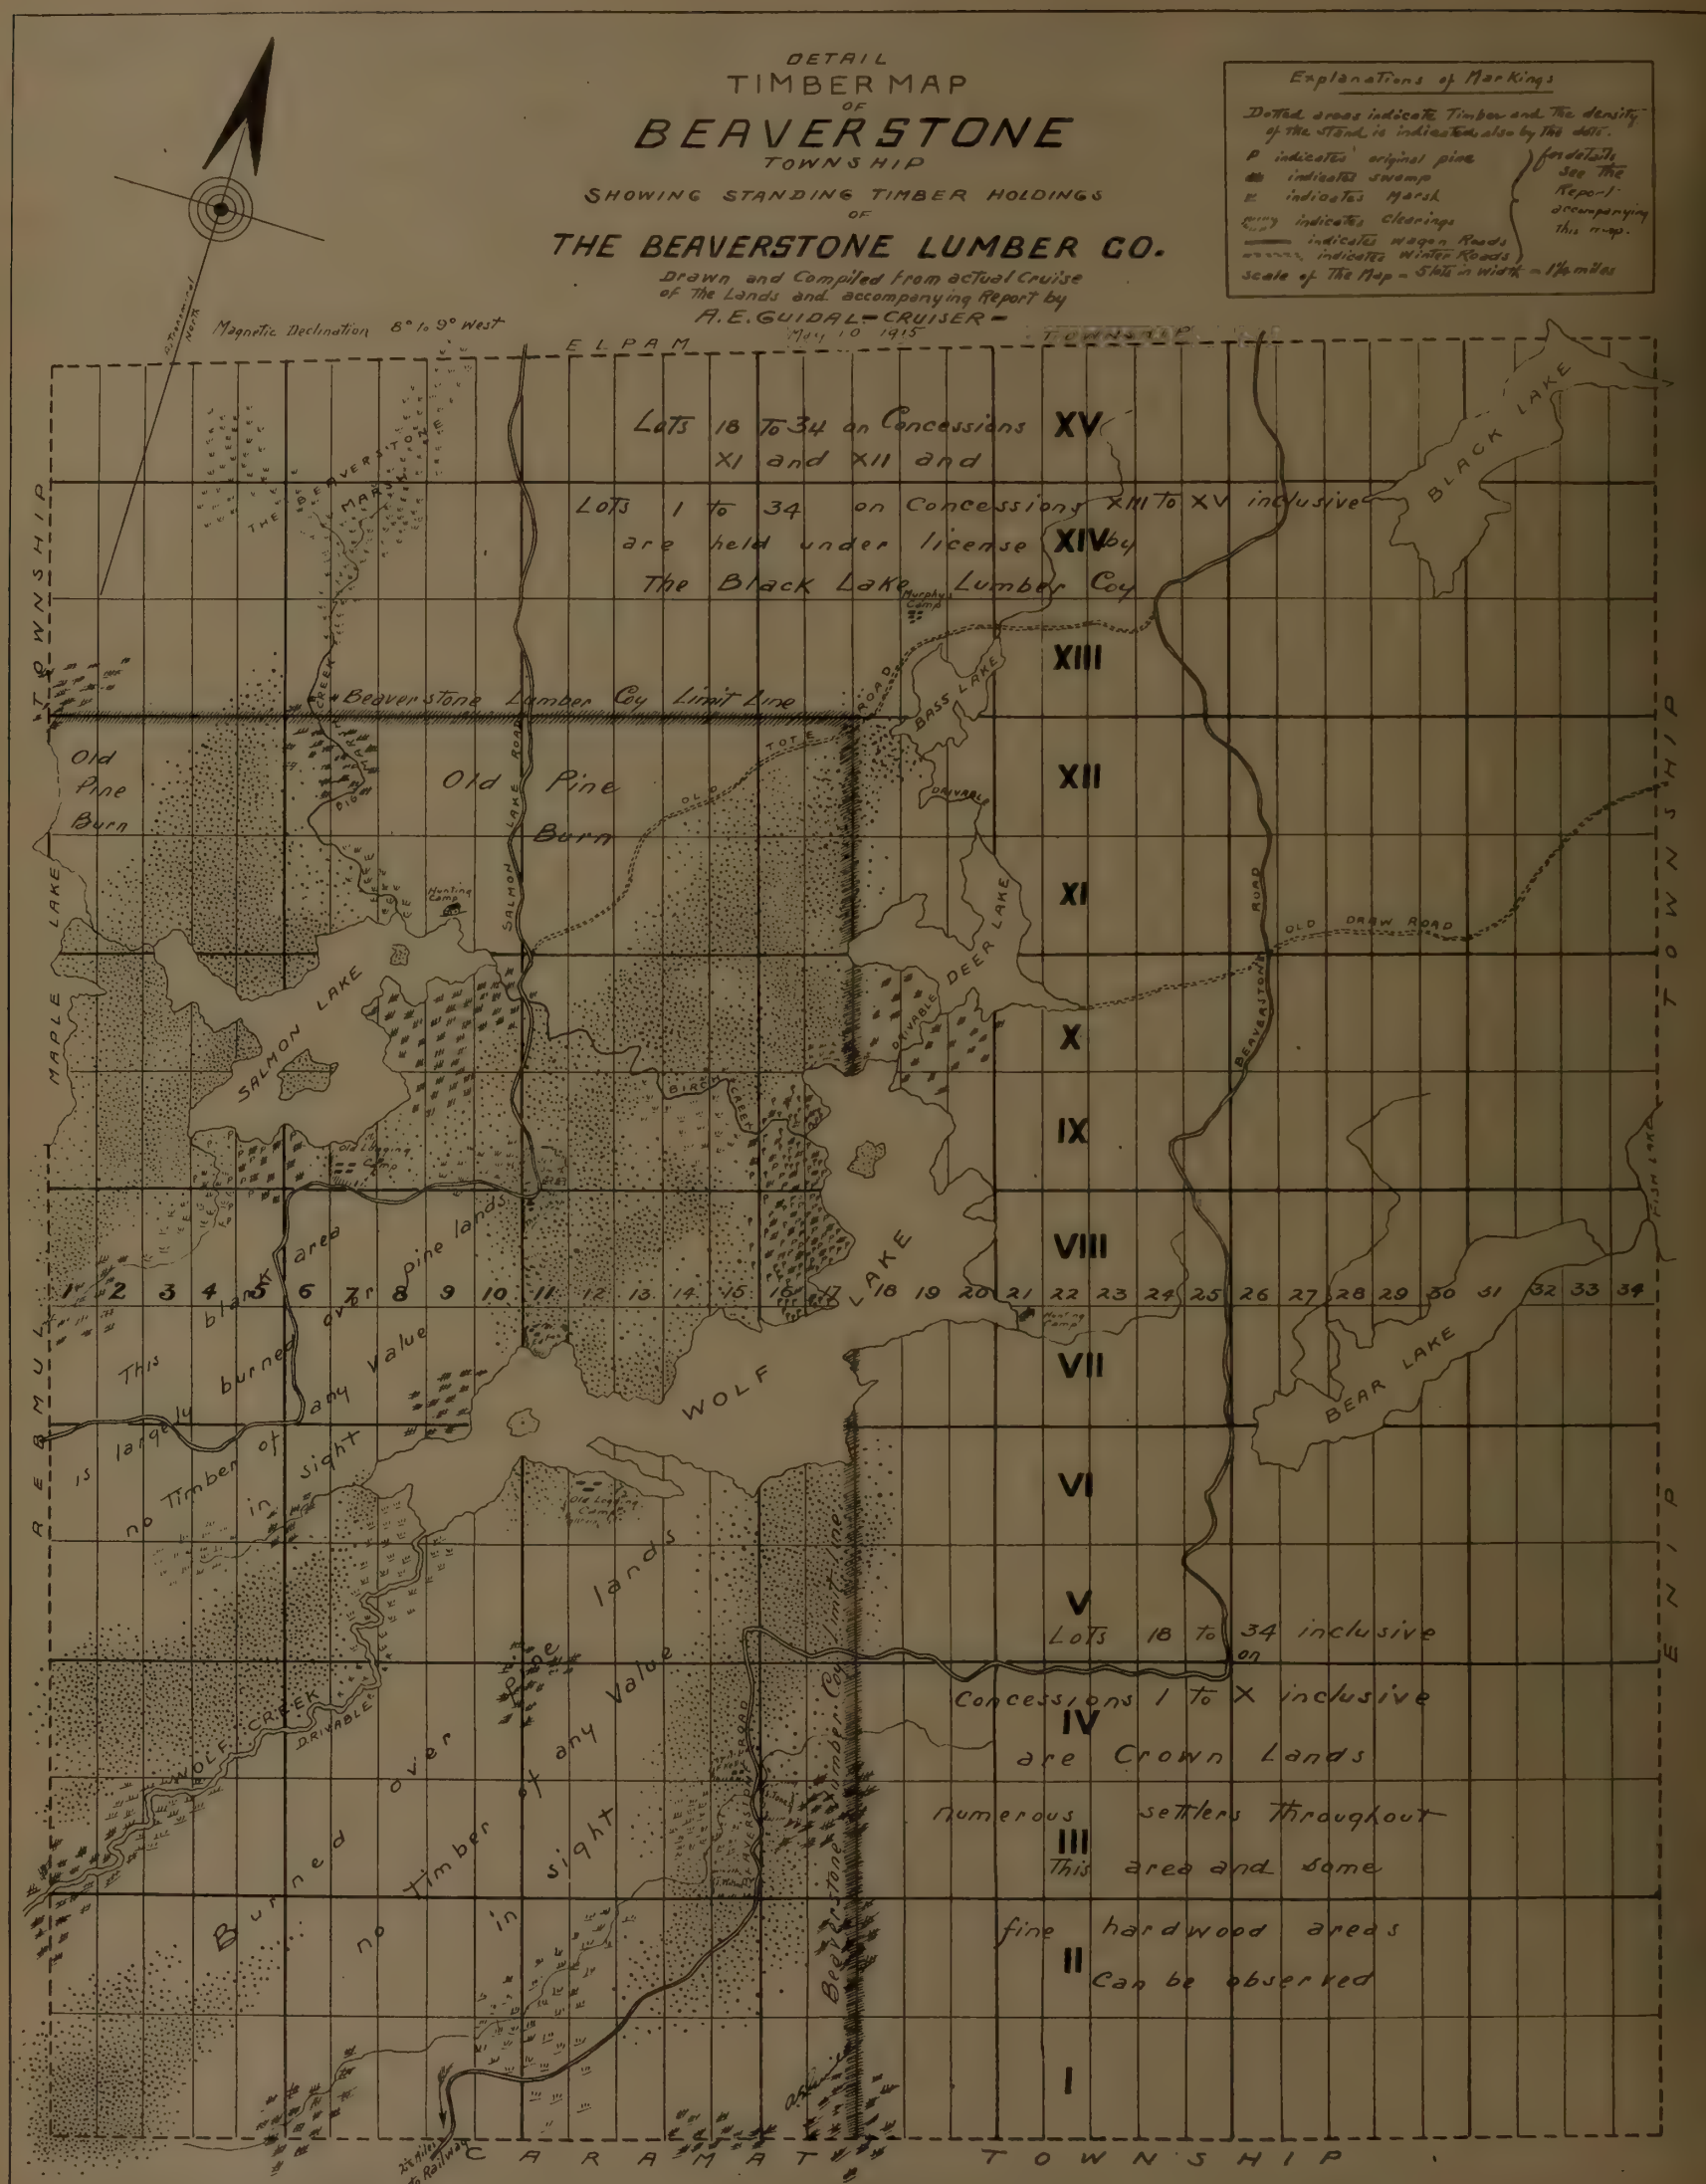

Long Service Medals for Employees

Pulp and paper concerns are encouraging continuity of service on the part of their employees, believing that the man who labors continuously for a period of years for one organization, is happier and more contented in his home surroundings, family life and occupation. They think also that he is a better citizen, a steadier employee and a more efficient producer than one who goes from place to place with no fixed purpose and no definite aim.

The Spanish River Pulp & Paper Mills are presenting all employees, who have been with the company five years or more, with what is known as the "Spanish River long service button." Many presentations of these buttons were recently made at Espanola and Sturgeon Falls. All the employees of the plants were gathered together and a social reunion was held. Stirring addresses were delivered by Col. C. H. L. Jones, manager of the company, and other officials. Col. Jones announced that at the completion of ten years each man would return his button and receive it back with the pearl replaced by a sapphire and at the end of twenty years a diamond would be set in the centre of the maple leaf.

It was also announced that all employees, who worked for three months or more in the mills or offices of the Spanish River Pulp & Paper Co., are now insured, without cost to themselves, against death and permanent disability. This plan went into effect last month and the schedule of the amounts of insurance is based on the length of service, ranging from \$500 to the employee who has been three months in the service, up to \$3000 for the one who has been ten years or more. The company also has decided to grant all employees annual vacations, with full pay, according to length of employment. Those who have been with the organization for six years will obtain a week's holidays; those who have been with it for ten years will get two weeks. At Espanola recently over one hundred and thirty employees received the gold service button and at Sturgeon Falls over sixty employees.

Greig Morris & Co., wholesale lumbermen, who were burned out in the McKinnon building fire, have their offices now at 23 Jordan St., Toronto, but expect to be back in their old quarters as soon as repairs are completed to the McKinnon block. G. A. Grier & Sons, who are located at 79 Adelaide St. E., corner of Church St., will also remove to their former offices as soon as possible.

The Importance of Timber Limit Stock Taking

By A. E. Guidal, Toronto, Ont.

A. E. Guidal, Toronto, Ont.

"Can you sell that timber limit of mine. It's a great snap for some one who wants to get into the lumber game in that part of the country."

"Where is it located, how large is its area, and what kind of timber is there on it?"

"Oh, it is one hundred and twenty-five square miles in extent, is situated in R—— county and is richly wooded with white pine, hemlock, birch, elm and other hardwoods."

"What is the stand of each and the density of the growth?"

"Oh there are five or six million feet of white pine, about two or three of hemlock and a couple of million or more of basswood and elm."

"Ever had a cruise made of the limit?"

"Oh yes. You know Jenkins

and Roche. They are experienced woodsmen and they have been through the property several times and say that it is one of the very best limits in that section."

"Have you the details of each kind of timber, its location on the limit, quantities, character of growth? You say there are about five or six million of this and that. On what do you base your claim?"

"Well, I have told you on the report of the men mentioned."

"That's it," was the rejoinder. "You have nothing very definite. The words 'about' and 'around' will not answer when it comes to a sale. Definite data is required. It takes a man with money to purchase a timber limit and he is not going to invest his capital on mere guess work or haphazard surveys. He wants to know. Just as a store keeper must produce his stock sheets and invoices if he wants to dispose of his goods en bloc, so must you have something of this kind if you desire to obtain a reasonable figure for your holdings in the bush."

The foregoing conversation is one that is heard frequently and reveals the reason why owners of timber limits lose money and many times fail in closing a profitable deal on such transactions. They secure a blueprint from the provincial Government, showing not more than the lot lines and such others as the original surveyors were able to observe at open line intersections. Armed with this and some vague, indefinite information as to the general character and growth of the timber, they imagine that there will be little difficulty in effecting a satisfactory sale of their wooded possessions. They name a price which they believe is a fair one but, when it comes down to real, hard facts, established beyond peradventure,

they are not in a position to furnish the desired data and negotiations are off.

Well do I remember an instance of this kind that occurred a few years ago. Finally, after much persuasion, I induced the owner to have a proper cruise made of his property, along with suitable maps and markings and, when this was completed, he realized over triple the price that he had been asking. The cruise of the lands and accompanying maps and reports cost him only a few hundred dollars. He was so pleased with the results that he gave the cruiser a handsome return over the actual figure which that gentleman asked for the performance of the work.

The Ascending Value of Timber

With timber constantly increasing in value and wooded lands growing steadily scarcer, with the ascending quotations for lumber and other forest products and the mounting expenses of logging, hauling, driving and towing, the day has come when all speculation, theorizing and rough estimating have to be eliminated. The era of buying a "pig in a poke" is over and timber purchasers demand actual facts and well determined data and not the vague, intangible proposition that might be got away with in times gone by. The importance and value, the necessity and advisability of a proper and efficient cruise are now fully realized. The forest engineer must have technical training; he must know timber through and through. Estimating comparatively small areas by rambling around the tract of timber in a more or less haphazard style and then, contrasting the stands of trees with similar ones with which he may happen to be familiar and, by mathematical or mental calculation, stating that there are so many acres and the timber runs so much to the acre and finally arriving at some sort of computation as to the total, will not answer at the present period for the reasons already outlined.

Now practically all cruisers make exceedingly close estimates of the individual trees on a certain proportion of the area to furnish averages for applying to the whole. Methods of field work differ vastly and the form of presenting them vary widely but, with the experienced and practical cruiser, who brings technical training to bear on the problem, a great advance has been made. It is true that cruisers do not always closely agree in their reports of the amount of standing timber, its character, density, etc; neither do real estate men in their valuation of properties, dwellings and business blocks. Often the man, who has a limit to sell, wants a report on the timber that, if it errs at all, will be on the side of a too generous figure while the man who is buying wants a return furnished that will eliminate all uncertainty by allowing a liberal margin for safety. There are thus variations in reports on the same tract according to the variability in standards and methods.

How Timber Cruise is Conducted

Mark Twain, the great American humorist, once said that t'was difference of opinion that makes horse races. Doctors differ, so do lawyers and men in all professions and yet each is right, according to his own standard and view, knowledge and insight. In engaging a timber cruiser to make survey, maps, and other detailed reports on the stand, topography, logging conditions, etc., of a limit, it is well to employ one whose work has stood the test of time and experience, who has an acknowledged reputation and standing and has proved that he is thoroughly conversant with the job and is capable of rendering efficient service and producing reliable reports.

I trust that this observation of mine will not be misinterpreted or misconstrued into anything of a personal reference. I am endeavoring to set forth a few facts on the value and worth of a proper and complete survey of limit holdings and for the information of a number of your readers at your request, Mr. Editor, and, not with the slightest intention of dwelling upon my own fitness or general qualifications for this particular kind of work. I simply desire to make known a few basic facts and to outline in the rough some of the means of proceeding with and conducting a survey.

This is an age of specialization and scientific methods, of greater productivity and the inauguration of the time and labor saving ideas. The limit holder is recognizing this, so is the lumberman, the logger, the wholesaler and the retail dealer in forest products. I notice that one of the leading topics discussed at the recent convention of the Ontario Retail Lumber Dealers' Association in Hamilton was that of a complete and accurate system of cost accounting as well as a more modern and effective means of forest preservation. Conser-

Estimates of Standing Timber

(See Detail Map on Page 44)

Summary of Standing Timber on Limits of the Beaverstone Lumber Co. Lots 1 to 17, Concessions 1 to 12 inclusive as on May 10, 1915.

	Salmon Lake area	Birch Creek area	Wolf Creek area	Beaverstone area	Totals
Hemlock	2,100,000	650,000	350,000	3,100,000
Maple	2,400,000	1,500,000	1,800,000	1,200,000	6,900,000
Black Birch	700,000	3,000,000	1,250,000	800,000	5,750,000
Basswood	500,000	750,000	200,000	1,450,000
Soft Elm	250,000	750,000	200,000	1,200,000
Black Ash	10,000	10,000	20,000
White Pine	60,000	60,000
	5,960,000	6,710,000	3,810,000	2,000,000	18,480,099
	Cds.	Cds.	Cds.	Cds.	Cds.
Spruce and Balsam Pulpwood	500	2,000	500	300	3,300
	Pcs.	Pcs.			Pcs.
White Cedar Poles	500	500			1,000
Cedar Ties	1,500	4,000			5,500
	Cds.	Cds.	Cds.	Cds.	Cds.
Hardwood Cordwood	6,000	7,500	4,000	2,500	20,000

vation, perpetuation and economic handling of our forest areas are matters which are crowding themselves to the front as never before and one of the greatest questions of the hour in the maintenance of our national timber wealth is that of adequate reforestation.

The same observations may be made with respect to timber cruising and surveys. After a timber holder has decided upon a proper cruise of the stand on his property, the cruiser that he engages for the work, sets out with one, two or three competent helpers. Reaching the limits he erects his tent and unloads his camp supplies prepared to remain right on the ground as long as may be necessary to complete the work. Equipped with all of the very latest existing maps and available information he first of all absolutely and definitely establishes his location, which as the work proceeds he has over and over again been able to prove up by existing lines and intersections. The amount of acreage he will be able to cover each day will depend much upon the topography and general characteristics of the area to be cruised, ordinarily from 300 to 500 acres a day. It is the best way that the cruiser undertakes the work at so much per day.

Referring to the timber area of the Province of Ontario in particular, there is almost no end to the variety of surveying that has been done. Much of the work is old. Many lines are almost entirely obliterated. The cruiser is able beyond doubt to prove up and, if necessary, re-establish every concession and all side-lines involved, re-marking legibly and with greatest possible permanency every corner in such a manner as would permit of a checking of his work.

Making Timber Map of Value

No matter how large or small the area to be cruised he submits a separate report and detailed plan for each individual lot. By submitting his report in this most complete way, the cruiser is able to show the degrees of variation from his compass of every line. The detailed maps which he submits reflect with reasonable accuracy the density of the stand in every lot on the limit. The composite map shows also the cut over or burnt-over areas, swamps, marshes, clearings, wagon-roads, streams and lakes, and much other information of value to operators and loggers.

The amount of travelling the cruiser and his assistants do, depends much upon the season and local conditions. In any case he sees it all. His experienced eye enables him to detect the slightest variation in density of growth, diameter or length of the timber, and very many times exact measurements and counts are made of an acre here and an acre there, to determine with more definite accuracy the size and variety, quality and density of each kind of timber on the ground. Experience also enables the cruiser by constantly recorded pacing to be sure of his exact position on any limit or even hundred acre lot. It is by this system of working that the cruiser is able to compile a report containing definite, reliable and proveable figures as to the number of feet, log measure, of each kind of timber, and adds to that which is suitable for lumber logs, cordwood, ties, poles, or pulpwood.

Little need be said of the money that has been lost by many limit owners and operating lumber companies in never having a proper cruise of their holdings. Limits, in numerous cases worth hundreds of thousands of dollars, have been returned to the government after a certain kind of timber has been taken off, or the supposed quantities on an area of a number of square miles have fallen far short of the estimate, after the work of installing sawmills has proceeded. The cut has run out several years before the computed time and fortunes have been sunk in the lumber business. The cost in connection with a forest survey, having proper maps and reports on limits is so small compared with the advantages and practical benefits of the work that it should not be given second thought by the owner, who wants to know where he is at, what he has and what use he can make of his assets, either in the way of a sale, operation, contemplated expenditure for equipment, or holding on. His property is daily growing more valuable in spite of higher license fees, stumpage dues, and fire protection services, by reason of our diminishing timber wealth, the world wide shortage of forest products and the call for wood goods in many new avenues of activity.

Old Demurrage Rates Still Stand

After a number of hearings and prolonged consideration by the Board of Railway Commissioners, an important decision turning down the proposition to apply in Canada the United States system of "average demurrage" on cars, was recently received by the Transportation Bureau of the Board of Trade. This is a decision which intimately affects all Canadian shippers and consignees, and is regarded as one of the considerable importance to the shipping fraternity.

Originally an application was made to the Railway Commission to have the Canadian car demurrage rules supplemented by the application of what is known as the "Average Demurrage" plan, which is

part of the national car demurrage rule in the United States, with the approval of the Interstate Commerce Commission.

The demurrage rules now in force in Canada allow the consignee 48 hours after the car has been placed to empty it. After that period a penalty, which is called demurrage, is imposed, \$1 for the first day, \$2 for the second, \$3 for the third, \$4 for the fourth, and \$5 for the fifth and every succeeding day, the idea being to prevent the cars from being used for storage purposes at times when there is a decided scarcity of cars. The Canadian rule makes no provision for averages as has been done in the United States.

The "Average" demurrage rule, as adopted in the United States provides that "The demurrage on all cars while loading or unloading shall be based on the average time of detention to all cars released during each month. The method of computation is that a credit of one day shall be allowed for each car released within the first 24 hours of free time. A debit of one day shall be charged for each 24 hours after the car is detained beyond the first 48 hours of free time. Not more than one day's credit is allowed on any one car, and not more than five days' credit is to be allowed in cancellation of debits accruing on any one car, this making a maximum of seven days, including Sundays and holidays that any car can be held free.

"At the end of the month the total number of days credited will be deducted from the total number of days debited, and demurrage charges on the remainder. If the credits equal or exceed the debits no charge is to be made for the detention of the cars, and no payments is to be made to the shippers and consignees in respect of such credits. Credits in excess of debits for any one month are not to be considered with regard to any other month. Those taking advantage of the average plan are to forego any advantage of the weather and bunching rule."

Application was made by the Canadian Manufacturers' Association and other trade interests for the extension of this average demurrage rule to Canada, and the decision of the Railway Commission has been awaited for some months past.

An order has been issued by the Board of Railway Commissioners, following this judgment, rejecting the application for the adoption of the average demurrage plan in Canada, which will be promulgated at an early date.

No More Direct Loans for Housing

Municipalities will get no more direct loans from the Ontario Government for house-building. In future they may issue their own bonds for that purpose, and the government will guarantee them. New legislation covering these two points was introduced in the Ontario Legislature recently by Hon. H. C. Nixon, provincial secretary.

Mr. Nixon informed the House that ten days ago word was received from the Dominion Government that there would be no further loans to the Provincial authorities for housing purposes. In view of this, his amendment was to wind up the work under the present act at the end of this year.

The amendment to the municipal act allows municipalities to issue their own bonds, which will be guaranteed by the Government. The money raised in such a way will then be expended for housing. It has been known for some time that the policy would be changed, in view of the fact that the Dominion was closing down on the grants, but until recently the extent of the change was not known. Toronto has been the only municipality in Ontario to have its own housing program, but the bonds, of course, were not guaranteed by the Province.

During the year seventy municipalities in Ontario were carrying on active work under the act. For the completion of the work now under way there is a revised list of amounts which may be loaned. Following are the loans available under the old act and under "The Municipal Housing Act of 1920":

Amounts loaned under Ontario Housing Act, 1919—House of frame construction, \$3,000; brick veneer, \$3,000; solid construction, \$4,000.

In the case of brick veneer construction if the cost of the land is included \$3,600 may be loaned. In the case of solid construction \$4,500 is obtainable.

Amendments to Ontario Housing Act—House of frame construction, \$3,200; house of brick veneer construction, \$3,800; house of solid construction, \$4,000.

If the cost of the land is included in the case of frame construction \$3,800 may be loaned. If the cost of land is included in the brick veneer type \$4,200 is obtainable. If the cost of land is included in the type of solid construction \$4,600 may be had.

Amounts of loans under limitations of "The Municipal Housing Act, 1920"—House of frame construction, \$3,500; house of brick veneer construction, \$4,000; house of solid construction, \$4,500.

If the cost of the land is to be included then \$4,100 is obtainable for frame, \$4,600 for brick veneer, and \$5,100 for solid construction.

Why Lumber is Commanding Stiffer Prices

Toronto Wholesaler Does Not Believe There is Any Early Prospect of Reduction— The Various Causes Over Which Operators Have No Control

A stirring address on "Lumbering and the lumber markets of today" so far as methods, production, prices and demand are concerned, was delivered before the Electric Club in Toronto on March 19th by A. E. Clark, of Edward Clark & Sons, Toronto, retiring president of the Wholesale Lumber Dealers' Association.

Mr. Clark considered his subject from many standpoints, showing how the lumbermen had year after year been facing increasing costs, the extent of which the public knew but little. He dealt with various phases of the calling both present, past and prospective, and referred appreciably to the part the lumberman had played in the war. They had carried on notwithstanding the industry had, probably, given more men to the forestry and other corps than any other branch. Lumbermen were, from their experience in outdoor life, particularly well-fitted for conducting operations in the forests of France, England and Scotland.

Mr. Clark did not hold out much hope for an early reduction in the prices of lumber, which, after all, are regulated by the law of supply and demand. There is an abnormal shortage today, owing to the tremendous requisitions brought about by the resumption of building after a cessation of six years and the fact that new uses for wood are being found on every side. It had been expected in some quarters that the lumber manufacturers could automatically rise to the occasion and meet this unprecedented state of affairs without the slightest difficulty. This is the view held by certain persons who did not understand the nature, extent and handicap of the lumberman's work. Those who are in a position to appreciate what he is up against, realize that he is doing his level best to cope with the situation in spite of the inefficiency of labor, its restlessness and excessive demands. In the matter of greater production, co-operation and assisting the work of reconstruction, the lumberman is not shirking his duty or taking any undue advantages.

"The lumber reaches the market approximately two years from the time you put the money into the product. If we had a reduction tomorrow the effect would not be felt till 1922," declared Mr. Clark.

The speaker reviewed the rapidly increasing costs in production during the last five years and pointed out the many little details which actually made the lumber business a precarious one from the point of view of the investor. "We must either increase our capital or decrease our production," he said. "There was never a greater need for production; yet we cannot increase our capital because people won't invest in standing timber at 7 per cent. when there is always the possibility of it being burned down."

Some Things Encountered by Operators

Referring to the present high cost of lumber, he stated that there was no commodity which had not increased far more than lumber. "It may be lost sight of that during the war while the manufacturer was straining every effort and the farmer was endeavoring to get every acre of his land under cultivation, the lumberman was not idle," he continued. "We were fully as hard hit as any other industry and now that we are returning to normal times we are called upon to fulfill unprecedented housing demands. And we have no surplus on hand, for that was eaten up in supplying war needs." The lumberman, he pointed out, had supplied tremendous quantities of stuff for army cantonments, for trench revetment, and above all for crating purposes, and, therefore, he was no more able to take care of the unprecedented demand for building materials than was the clothier to fulfill the demands made on his industry.

In addition to a general shortage of labor, which had been enhanced by the war, the lumberman had to contend with a scarcity of transport. Softwood could be floated down streams, but that meant that crews had to accompany the logs and consequently roads had to be built to carry supplies along behind them. Hardwood must either be drawn out or other means of transportation.

Logging locomotives, he pointed out as another instance of increased costs, cost only \$13,000 in 1913. Now they cost \$40,000, while steel rails, which in 1911 cost \$22 a ton now cost \$63 a ton—when they were obtainable, and sawmill costs had increased from 600 to 900 per cent.

We have the law of supply and demand, which very largely regulates our prices," he said. "For every 1,000 feet of lumber we

produce we have ten gentlemen waiting for it and naturally that increases the price. Increased production is our main issue."

What Certain Industries Require

Both Canada and the United States were being called upon to supply the housing needs of Great Britain and France and this condition only aggravates the pressing demand. In the United States in 15 principal cities permits since the war had increased 182 per cent. and building values had increased 208 per cent. In Canada 11 cities reported a 45 per cent. increase in permits and a 77.7 increase in building values.

The automobile building programme for 1920, too had increased and at present it contemplated the construction of 2,900,000 cars, a condition which meant the use of three billion feet of hardwood lumber. "Formerly," he said, "the major portion of this work was taken care of by the oak and ash producers in the Southern United States. This wood was then selling at \$90 a thousand. It has now increased to \$385 a thousand and the automobile manufacturer has consequently turned to the northern hardwood fields for his supply. We do not know how to take care of this demand." Gramophones used up a tremendous quantity of hardwood, as well, he said. He cited the case of one factory he had visited where ten million feet were used annually.

Major Hartt Rejoins Fesserton Co.

Major J. I. Hartt, Orillia, Ont.

Major J. I. Hartt of Orillia, lumberman and ex-member for East Simcoe in the Ontario Legislature, recently joined the purchasing staff of the Fesserton Timber Co., Toronto. Major Hartt is well known in lumbering, legislative, military, forestry and fraternal circles. He has had many years' practical experience in all branches of the lumber industry. For thirteen years he was with the Gilmour Company when they conducted a flourishing mill at Trenton, Ont., and filled practically every position in the gift of the organization. Later he joined the Fesserton Timber Co. and was with them for a long time, subsequently forming the firm of Hartt & Steele, and, after the dissolution of the partnership, carried on business for himself

until the outbreak of the war. Major Hartt had command of a detachment of the Forestry Corps in France, where he spent some time and made a record for expeditious construction of sawmills, for which performance he gives those under him full credit. A mill of 35,000 feet daily capacity was erected in the Gironde district and running in first-class shape sawing white pine, all within nine days. Timber felled as late as 4 o'clock in the afternoon of the first day of its operation was cut into ties and shipped out that same evening for the allied troops.

Major Hartt was a member of the Ontario Legislature from 1911 until the election of last year. He also was a member of the municipal council in Orillia for several terms but now that he is free of legislative and military duties, is devoting his attention once more to the lumbering industry of which he has long been an enthusiastic member. Major Hartt is of Irish extraction but has resided in Canada since 1884.

The 1920 census will probably show that 60 per cent. of the people of the United States are living as tenants, says the president of the F. W. Dodge Co., New York, in a recent bulletin. France is said to have but 20 per cent. of tenantry, whereas the census of 1890 showed that 52 per cent. of the people in the United States were tenants; in 1900 the percentage reached 55 per cent. and in 1910, 58 per cent.

Will the association be able to draw up an order form that will prove satisfactory to the rank and file of its members and, at the same time, answer all the requirements of the wholesalers and the

Patriotism and the Planting of Trees

Various articles appearing in the press state that the scarcity of timber in Ontario is becoming more pronounced and point out that patriotism is closely allied with reforestation. J. B. Dandeno, Inspector of Elementary Agriculture Classes for Ontario, has sent out a circular letter to the inspectors and teachers of the schools in the province, which asks them to inspire the pupils with a love for trees by giving some practical lessons on the subject of forestry. Mr. Dandeno says: "One objection to the planting of trees with a view to harvesting the crop is that the harvest seems so far in the future. The answer to this is, that the man is a poor patriot who cares little for the coming generations, who does not aim to leave the world a little better than he found it." As an appeal to selfishness, he adds: "Moreover, the time of harvest need not be beyond one generation. Certainly trees grow more rapidly than many people think: Black Locust often reaches 16 inches in diameter in 30 years; American Elm, 18 inches in 40 years; Soft Maple and Basswood, each 16 inches in 35 years." To plant even some of the trees mentioned would be an act of patriotism on the part of the majority of teachers or inspectors, but to emphasize the patriotic spirit, the children might be prevailed on to plant a few oak trees or some apple trees of the Northern Spy variety.

It is necessary that others beside school children make a show of patriotism by planting trees if the lumber supply of Ontario is not to arrive at the vanishing point within the lifetime of some now living. The time for merely conserving the supply is past, and if individuals and private corporations do not act strongly and immediately in planting waste areas with trees, the Government will have to take a bigger hand in the game. Fortunately, the authorities in some of the counties in Ontario are beginning to show interest in reforestation, and it may be hoped that their efforts will prove effective.

Many Amendments to B. C. Forest Act

In the B. C. Legislature, recently, Hon. T. D. Pattullo, minister of lands, introduced a bill to amend the Forest Act. The measure makes provision for an attack upon the pine-bark beetle, which is now ravaging the yellow pine timber east of the Cascade Mountains. By reason of the ravages of this destructive pest the department has deemed it advisable to take authority to institute measures of control as between private owners and the crown. Another section of the bill deals with the period with which an application for perpetuating the tenure of timber licenses could be

made. The date is set as March 31, 1919, and the corresponding period in the case of survey of licenses officially ended in November 30 last. But as the various holders who were overseas on military duty were thus given insufficient time to make the necessary application or survey, the bill proposes to extend the date in both cases up to the end of the present calendar year, when the general privileges and exemptions of the Relief Act will all terminate.

One section of the amendment makes a change regarding hand-logger licenses on account of the advent of gasoline as motive power, imposing the condition that machinery be not used in this particular connection.

The fixed rate of 5 cents per thousand charged for the official scaling of timber west of the Cascades is an important abolition contained in the provisions of the bill. There is now substituted authority for the creation of a scaling fund, into which all monies received on account of official scaling shall be paid and from which all costs of the scaling service shall be defrayed. This fund will be self-supporting and the scaling fee charged hereafter will be determined by the average amount necessary to cover costs.

Increased operating costs are reflected in the provision to increase the forest protection tax from 1½ cents per acre to 2 cents per acre, while a novel feature in forestry legislation appears in the section which provides for the issuing of licenses to tap trees for resin. A royalty on resin is provided for, as well as a method for issuing resin-extraction permits to timber licensees, lessees and pre-emptors who hold timber cutting or other rights upon crown lands.

Will of the Late W. J. Hetherington

The will of Wm. J. Hetherington, a widely-known lumberman of Toronto, who died in June 1918, according to the terms of his will, just made known, left an estate of \$41,158.00. His wife, Mrs. Catherine A. Hetherington, is the sole beneficiary. The estate is made up of household goods and interest of the deceased in the Riverdale Lumber Co., and Wm. Laking Lumber Co., life insurance of \$14,482 and an equity of \$22,498 in 677 Queen street east, which forms the yard and office premises of the Riverdale Lumber Co.

"Why is your window filled with misspelt and ungrammatical signs?" asked the Inquisitive Man who had gone into the store. "Why, people read them and think I am a yap and come in to short change me," replied the storekeeper. "I have more trade than I can attend to."

Great Future for the Wooden House

Agent General Wade of British Columbia Speaks of Dwelling Requirements in Great Britain

"If any belief exists in British Columbia to-day that the demand for the colonial wooden bungalow in Great Britain and continental Europe is only of a temporary nature the delusion should be dispelled forthwith."

Thus did F. C. Wade, K.C., agent-general for the Province of British Columbia in London, express himself. He is home on two months leave of absence. The agent-general declared that Great Britain's housing policy has progressed barely beyond the negotiating stage for the simple reason that building materials are not nearly non-existent, but also so expensive that any programme fashioned upon a wholesale scale must be weighed from the cold, economic standpoint. Mr. Wade frankly confesses that his fight and victory for the wooden house was made doubly difficult by the deep-rooted prejudice which appeared to exist in the official mind to any departure from the class of dwelling to which Great Britain has been accustomed for centuries, to bring the ministry of health to an understanding of the utility of the wooden house.

Referring specifically, however, to British Columbia's ability to supply the need, Mr. Wade is of the opinion that never in his history did such an opportunity present itself to British Columbia. He declares that it will take Great Britain fully twenty years to recover from the present house shortage and her inability to repair the deficiency is being recognized by the public at large which sees a solution, the only solution, in the importation of the wooden house. But the demand for the ready-made structure, the agent general points out, is by no means limited to the United Kingdom. He states emphatically that Belgium, France, Italy, Palestine, Mesopotamia and a number of other countries and small states are in the market for dwellings of the kind that British Columbia should be in a position to supply. "It is my opinion, and I am talking from my actual knowledge of conditions in Europe, that if this province will bring itself to a realization of the business that is going begging for the asking in the matter of wooden house construction an industry can be built up in British Columbia of such magnitude that would dwarf its present commercial standing almost into nothingness," said Mr. Wade.

"After encountering much hostility and indifference at the start of the movement, it is safe to say that the battle for wooden houses, as a means of meeting the present serious house shortage in England, has been won," Mr. Wade concluded. "The government capitulated and the public is clamoring for wooden houses. All sorts of arguments were brought against them. They were draughty, they were liable to become verminous and harbor germs and they were unsuitable to the damp climate of the British Isles, were some of the arguments we had to meet."

"Now it rests with the people of British Columbia to take advantage of the great opportunities which lie open to them of building up a great market for houses built of British Columbia timber. England alone is one million houses short of her requirements. France and Belgium are in urgent need of housing accommodation and they have neither the materials nor the labor to produce bricks and mortar in sufficient quantities."

"The tonnage question remains one of great difficulty, but ways and means are being considered by which this may be overcome."

Company Will Operate Near Peterborough

A new company of Peterborough and Toronto capitalists is being formed to undertake a large lumbering operation. The moving spirit in the organization is John Duignan, a well-known lumberman of Peterborough, Richard Sheehy of Peterborough, who has long been in the contracting business in that city and others. It is expected that the new company will begin bush operations this fall and that their pay roll for the first winter's cut will amount to about one hundred and twenty-five thousand dollars.

Limits have been acquired on Pigeon Lake north of Sandy Point and bordering on Ball Lake. These holdings were originally held by Mossom Boyd, the elder, and S. S. Kelly of Bridgenorth. While the mills at Bobcaygeon and Bridgenorth cut immense amounts of standard sizes of merchantable pine and dimension timbers, all that was ever removed from the limits in question was in the shape of masts, which were taken out and sent to Quebec for use in shipping or for export. On the ground still stands the best of the forest growth. Pines that reach 120 feet in height and three feet in diameter, oak of the same diameter and over eighty feet high, spruce and other woods are abundant. Of oak alone there are fully one million feet.

All this forest opportunity has been acquired by the company, recently organized to exploit the limits and place on the market that which has been reserved so long. The company takes over all the

Kelly interests as located at Bridgenorth, at Lakefield or elsewhere. The Kelly business as manufacturers of merchantable lumber passes out of existence and into new hands, to be made use of under a new name. Just how the existing plants will be made use of has not been determined, but it is the intention to prepare for manufacturing on a very large scale.

It is under consideration to build, possibly at Bobcaygeon, a finely equipped band saw mill, containing all the very latest improvements. The mill will be steam driven, as water power is out of the question. A determining feature will be the net cost of laying down at the mill site the logs, and it is to be considered that cost of delivery per 1,000 feet B.M. will be to Bobcaygeon 25 cents, to Lakefield \$1.50, and to Peterborough \$2.50. That is the cost of floatage and towage. Shipping facilities are good at Bobcaygeon and at Peterborough, while at Lakefield, in between, there is little difference once the lumber is on the cars.

Having the plant at Lakefield to either use or dispose of it will be for the future to decide, as well as to the ultimate disposal of the Bridgenorth mill and plant. As planned, the function of the new mill will be the manufacture of lumber, with, in prospect, that of hardwood flooring and quarter-cut oak and supplies from other hardwoods. It is expected that the capacity will be over 40,000 feet of lumber per day, with 25,000 feet of lath, 25,000 of shingles, and 1,500 railroad ties.

John Duignan, who is the main man behind the new enterprise, gained his first experience in the lumber line with the late T. G. Hazlitt of Peterborough, who was a prosperous lumberman and, for many years, was manager of the estate of the late Samuel Dickson. Mr. Duignan spent three years in the lumber camps, and, on the formation of the Dickson Company to take over the business of the Dickson Estate, he joined the office staff as bookkeeper. When the company bought the Scott timber limits, Mr. Duignan was made superintendent of their business activities with mills at Lakefield, Peterborough, and Harwood, with an annual output of lumber and dimension timber of some twenty million feet, which was marketed principally in the United States. On the death of Mr. Hazlitt, Mr. Duignan became manager of the company, which position he filled for three years when he was appointed sales manager for Alfred McDonald of Peterborough in his lumber and box business. Mr. McDonald passed away in 1906 and the subject of this reference was made one of the trustees of the estate as well as manager of the business. This post he held successfully until Mr. McDonald's youngest son became of age in June, 1919, and the business of the estate was closed up and handed to the beneficiaries. Mr. Duignan and his associates have secured all the Kelly Lumber Co.'s timber limits together with the sawmill and mill site at Lakefield.

Peterborough Lumber Concern is Extending

The city council of Peterborough, Ont., have passed a bylaw conveying to the Alfred McDonald Lumber Co., Limited, of that city a portion of Crescent st. for factory extension purposes. The agreement is that the company shall pay five hundred dollars for a deed of that portion of the street which they will use. The bylaw also provides that if the land in question ceases to be used for manufacturing purposes within fifteen years, it will revert to the city, the company to be repaid their purchase price of five hundred dollars. A. Dick, manager of the Alfred McDonald Lumber Co., said that the firm required that portion of the street for manufacturing purposes and that the buildings would be erected on a solid, substantial foundation. He added that they could foresee needing the whole block in the future to take care of their growing business. He did not know a better site in Ontario for a planing mill and sash and door factory and the erection of better buildings, he declared, was contemplated for the plant must be developed.

Progressive Retail Lumber Dealer

D. H. Andress, who was recently elected a member of the Insurance and Workmen's Compensation Committee of the Ontario Retail Lumber Dealers' Association, at the annual convention in Hamilton, is widely known in the northern district of Ontario. A progressive resident of Sudbury, for the last eighteen years he has been in the lumber and milling lines. Mr. Andress has been a member of the Evans Co., Limited, Sudbury, since organized in 1906, in the capacity of manager. The company, whose premises are located at 39 Lorne St. in that town, have adopted as their business slogan "Everything for Builders." Mr. Andress is also a member of the Empire Coal & Lumber Co., of Sudbury, since it was formed in 1909 during which time he has been the president. The Empire Co. have a lumber yard, planing mill and coal business in Sudbury.

The Making of Logging Roads in Winter

By W. J. Stadig, Canadian Fairbanks-Morse Co., Ltd., Montreal

With the present high cost of labor and material, and with the consequent increased cost of delivering the logs on the landing or at the mill, the attention of the operator is drawn to labor-saving devices and modern methods more than ever before. Especially is this true when the maintenance of the main arteries of the logging roads is considered.

This very important factor is too often overlooked by the operator, who fails to realize that the intelligence expenditure of time and money on the maintenance of his roads means a greater amount of logs on his landing or at the mill in a shorter proportionate time, as well as increased profits.

The lumberman of to-day employs practically the same methods in his winter road maintenance that his predecessor did fifty years ago. This is not through the lack of initiative on the part of the lumbermen, for the lumberman of to-day is a wide-awake, progressive, energetic business man, but is due rather to the fact that improvements in winter road-making machinery have not kept pace with improvements in other branches of the industry. The usual mode of building up a logging road is as follows:

The average logging road follows along the water-course of a small stream. The logs on the water-shed of this stream are cut and, to use the logging term, are "snaked out" and yarded at some convenient point along the main road. This part of the work does not

with a horizontal scraper knife between the two. The scraper is drawn over the road, levelling the knolls and filling the hollows with snow until the road is in proper condition, so that better roads are hauled with every passing day.

But the road is not completed yet, for men are at work skidding

The power rotary snow plow

sliding places, filling holes with snow, cutting down knolls and preparing the road to carry the heavy loads which will be hauled over it. The skilled lumberman lays a good deal of stress on having a good hard bottom for his road, and when it is reasonably level, he endeavors to maintain it in that condition.

Increasing Efficiency of the Teams

By this time hauling starts in earnest. The operator figures he has 50 or 60 days for hauling and uses a proportionate number of teams to handle his cut in that time. A crew is maintained at the yards and at the landing for loading and unloading the teams. On a packed snow road, if the road is reasonably level, the teams are hauling from 1,500 to 2,000 feet per load. The progressive operator is not satisfied for he realizes that he can increase the efficiency of his teams 100 per cent. by icing his road. Places are cleared at convenient points along the road where water is accessible, and tanking teams are kept busy sprinkling tons of water on the up grades and level parts of the road. Straw, rotten wood, or dirt is placed on the heavy down grades, and in some districts special apparatus is used to ease down the heavy loads. The tanking teams very often do their work by night when the cold night air freezes the water and makes it possible for the heavy loads to glide easily to the landing.

The operator is happy when he has a good road and the teams are loaded 100 per cent., but owing to our inclement winter climate, his contentment is short-lived. The road is no sooner in perfect shape than a snowstorm comes, and during the storm the teams can haul only 25 or 50 per cent. of their capacity loads. An operator with 20 teams has an expenditure in equipment, men and supplies of approxi-

The iron horse and its load

entail a great amount of road work, as the logs are usually "twitched" or hauled to the yards on a jumper. A jumper is a sled with wooden runners, and is usually hewn out and built by the shanty mechanic. The end of the log is supported on this sled, the bark is hewn from the lower side of the end of the log which comes in contact with the ground or snow and the logs are hauled by this method to the yards. The roads follow the line of least resistance and no great effort is made in clearing the roadway, as only sufficient underbrush is cleared to enable the horse or team to pass through.

The logs are cut and yarded in the fall or early winter before the snow is too deep. In the meantime a crew of "swampers" are kept very busy clearing the main logging road which follows along the bank of the stream, to a point where the stream forks with some other tributary, or to where the stream is sufficiently large to enable the logs to be floated to the mill.

The roadway is cleared ordinarily about 15 feet wide, trees are cut down low at the stump, water holes are skidded (bridged), the knolls are cleared away and all underbrush removed. The road terminates at the landing, at some point where the banks are suitable for placing the logs. The banks are cleared and the trees are felled to make a skidway, upon which the logs are rolled and left until the spring thaw, when they are floated to the mill.

After sufficient snow has fallen to make good hauling, "the road is broke." This means that teams are driven over the road for a few trips with only the light sleds; after the snow is packed to a certain extent, light loads of logs are hauled over the road with the rear part of the load dragging. This packs the snow and levels the knolls so that the roadway improves rapidly.

A long scraper is then used to level off the knolls. This consists of a framework of two 3-inch by 10-inch timbers about 18 feet long,

mately \$500 per day. The storm continues for possibly two days. As soon as it subsides, three or more teams are sent over the road with the plow, consisting of hewn timbers bolted together to form two spreading wings. The plow is weighted and dragged over the road, running the snow to a bank on both sides. The tanking teams follow behind the plow and with good luck and fine weather, in two or three days the teams are working well once more. The operator now has a good road with ample snow and is not praying for more, as a two days' storm can easily mean a loss of several hundred dollars to him.

Snow storms, however, are common occurrences in our vigorous winter climate and storm follows storm until the operator must increase his force, or leave part of his cuts in the yards. The plow which he has been using no longer works satisfactorily, for, after a few trips over the road with it, the banks are formed so high that it is difficult to remove the snow out of the road. The road rapidly becomes high and difficulty is experienced with the heavy loads cutting out. A heavy rain means that the operations is tied up, until it freezes again with resultant delay and expense.

The operator has long felt the necessity of a practical winter road-making machine. This need has led to the development of the rotary snow plow.

This machine is a proven success in country highways and suburban work, and promises to have a great field in the maintenance of logging roads. The accompanying photographs show the machine at rest and in operation. The horses are not required to do very heavy work, as the machine slides on runners and the front sled is high enough to clear a 24-inch bank of snow without dragging. If desired, the machine may be set to an offset on the front and rear sled, so that when cutting the bank away in widening the road, the horses travel on the part of the road already cleared. In one traverse the machine clears a space 5½ feet wide. The depth of it and the slope of its surface may be regulated by moving the rotary cutters as

the machine passes along. Thus, the surface of the road can be made of uniform height. An uneven tilted surface can be levelled; or a 22-inch comb or ridge, 1 inch to 4 inches in height, can be left by centre plow adjustment. In two traverses (out and return) a road 11 feet wide can be cut, and this width can be increased by additional traverses, the snow being thrown beyond the part already cleared.

With this machine on a logging road the road could be maintained 100 per cent. efficient at all times. If during a storm the operator would operate this plow ahead of his teams, he could haul as good a load as he could before the storm began.

The snow thrown out of the road would never form a bank, and the road could be maintained with a good hard bottom at all times. The expense of tanking the road would be reduced at least 75 per cent. The water would be confined to the rut, formed by the rotary cutters, in which the sled runners travel. If a good ice bottom were once secured, it could be maintained at a small expense, for, during the storm the rotary cutters on the plow could be set at the proper depth to remove only the snow down to the ice surface. With this machine a good iced road could be maintained without the expenditure of tanking the road after every snow flurry. One team of horses and two men on the Stadig plow could maintain a logging road so that full capacity loads could be hauled regardless of stormy weather. The saving to the operator would be great, and it would seem as if every operator must see the advantages to be gained.

The Canadian Fairbanks-Morse Co. report that the Laurentide Co., Grand Mere, Que., and the Fraser Companies of Edmundston, N. B., were among the first organizations to utilize these power snow plows for making roads. It was the intention of the manufacturers to demonstrate the rotary snow plow on the hauling roads of both the Laurentide and Fraser companies, but the machine which was held for this purpose was destroyed in a warehouse fire, and another one, not being available, the matter was dropped temporarily.

LUMBER FIRM ANSWERS PRESS CRITICISM

Utterly Impossible to Manufacture Lumber at High Cost and Sell it Cheap to the Public

"Western Canada Appalled at High Lumber Prices" was the title of an article which recently appeared in a Montreal daily paper. Certain statements were taken exception to by a leading Montreal lumber firm who in a letter to the journal in question say:

We regret to say that there is certainly a misunderstanding in regard to some articles which you have been publishing, and it is with the sincere wish to correct certain erroneous impressions, that we are writing you. The American box car situation is not only acute, so far as Canada is concerned, but also in the United States, and we know from actual experience what we are talking about.

Still further, if the attitude of the Western Canadian in regard to buying lumber is the same as the spirit that is entertained by Montreal people, we might quote you the following conditions, viz.: that in many large retail yards in Montreal, anybody wishing to buy lumber, can go there and purchase lumber that was manufactured three, five and seven years ago. This is old enough to have become dark and discolored with weather conditions, and is practically offered today to any body at ten to fifteen dollars per M less than the actual market price for nicely sawn and fresh-looking stock, yet these yards are unable to sell it, apparently, to the very same people who, instead of purchasing lumber with a view to build homes for themselves or for other people, and thereby relieving the congestion of the housing proposition, are purchasing automobiles and other luxuries, the majority of which comes from the United States. Autos cost all the way from \$2,000 and upwards, and, you will agree with us, this same payment of \$2,000 would go a long way toward being a part payment on a reasonably comfortable house costing from \$5,000 to \$7,000.

We regret to disagree with the various articles that have been written, because we feel that they are being produced with the purpose of simply knocking the prices of lumber. We think these same critics wouldn't be in the business to buy any lumber, even if it was \$10 to \$15 less per M ft. Two or three years ago many cities in the United States figured out that the prices on lumber were such that they couldn't build. They would wait until the prices fell, with result they realized very quickly that, instead of the values sagging, they were going up. Unfortunately, some large Canadian cities are still in the attitude of waiting, with the result, as you well know, of the housing proposition today in Montreal. We use this city as an example of the general attitude of Canadians in regard to buying lumber. We are told that in Canada one out of every twenty-three people has an automobile, whereas the United States comes next, with one for every twenty-two people. We don't wish to emphasize the automobile question, but merely use this as a forcible illustration of the mania for luxuries.

In regard to cutting down the prices of lumber, this can only be done when the cost of production can be reduced. If any of our Canadians could offer a solution, we lumbermen would be prepared to follow it, but we have so far failed to be able to manufacture lumber at a high cost and sell it cheap.

The question of the high cost of lumber is a wide one and can be criticised and discussed at large. We would like to mention that ten years ago one million feet could be piled and shipped on board steamer and cars for about fourteen to sixteen thousand dollars per million feet B.M. To-day the cost of this very same quantity range all the way from forty to fifty thousand dollars per million feet B.M. There are many concerns who were cutting ten million and more feet per season, but now they cannot cut half this quantity. Although they turn over more dollars per annum, they produce very much less feet B.M. The demand for lumber is not near normal, yet the production is only about 40% of the quantities as manufactured, say eight to ten years ago. It is not a question of demand so much as of shortage in production. The latter was brought about by the lack of finances because it can be easily understood that if one calculates ten million feet at fifty thousand dollars per million as compared with ten million feet ten years ago at about fourteen thousand dollars per million, even though his banking facilities might have been arranged for a larger margin, yet proportionately, everybody couldn't get sufficient for each of their wants.

In regard to our railroad conditions, if reports are true, the Canadian railroads have been able to handle twice as much imports, in value at least, as the American railroads have been able to handle of our exports. Of course, we appreciate that possibly the imports, such as silks, etc., might have taken fewer cars than what our exports have in the way of lumber, pulp and paper.

The American railroads have placed an embargo east of Buffalo on all American box cars coming into Canada, with the result that the few we had up here have been exhausted. We cannot blame our Canadian railroads for not wanting to send any more of their box cars across the border, when one considers that the U. S. rail-

roads have about 60,000 of our Canadian box cars on their lines, as compared with our having about 30,000 U. S. cars in the Dominion.

Wire Rope and Its Advantages

The Canada Wire & Iron Goods Co., 182-186 King William St., Hamilton, recently issued a handsome and admirably illustrated wire rope catalogue. The company have a plant which is splendidly equipped for the making of wire rope of all kinds, and possess facilities for turning out every construction of this material. The Canadian Wire & Iron Goods Co. carry a large stock of both rope and rope wire, and announce that they are in a position to make prompt shipments and render efficient service.

Their new catalogue, which contains much valuable information in compact form, will be sent to anyone who drops them a line. It will be found a handy reference volume, well worth preserving, telling all about wire rope construction, its durability and flexibility. The Canada Wire & Iron Goods Co. manufacture wire ropes of all kinds and for all purposes, combine the highest quality of material with the greatest degree of skill in production.

Now Montreal Sales Office

The Engineering & Machine Works of Canada, Limited, St. Catharines, Ont., owing to the rapidly increasing demand for their products consisting of boilers of all types, horizontal, vertical, locomotive and marine, tanks, plate work of all descriptions, etc., and particularly in connection with their recent and very successful venture, the manufacture in Canada of the Keystone Light Traction Excavator, Model 4, have found it necessary to open another Eastern sales office in the Birks Bldg., Montreal, where inquiries can be more quickly and satisfactorily handled. This is in addition to their sales office in the Sun Life Bldg., Sherbrooke, Que.

New Firm Located at Bathurst

The Wightman Lumber Co., Limited, which was recently incorporated, has its headquarters in Bathurst, N. B. In a reference to the new organization, Chatham, N. B., was erroneously mentioned in our last issue as being the location of the new firm, which should have read Bathurst, N. B.

Mr. George E. Wightman has been associated for several years with the Gloucester Lumber & Trading Co. at Bathurst, where he is well-known. That enterprising town is the centre of a large producing section, and the Wightman Lumber Co. will handle the cuts of many of the smaller mills as well as the output of several of the larger ones, and will act as buying agents for several customers in the United States and Canada. The Wightman Lumber Co. report that the prospects for the coming season are exceptionally bright.

Eastern Pulp Mills Change Hands

C. Howard Smith of the Howard Smith Paper Mills, Ltd., Montreal, and H. C. Flood, of Montreal, were recently in Fredericton, in connection with the sale of two pulp mills on the Miramichi, which are being transferred to the interests closely allied to the Howard Smith Paper Mills. The two pulp plants taken over are the Dominion Company's mill at Chatham and the Maritime Paper Company's mill at Millerton. The two have a daily capacity of about one hundred tons. No timber limits are concerned in the deal. Negotiations are under way with the provincial authorities in New Brunswick to obtain certain Crown lands, and it is expected that other limits will be secured by the men behind the new enterprise.

Seaplane for Price Bros. in Quebec

A large seaplane will shortly be shipped from Vancouver to Price Bros., of Quebec, where it is expected it will be used in connection with the timber operations of that company. The seaplane is being built by Hoffer Bros. and has a 42 ft. spread and a passenger capacity of two. It is considerably larger than the flying boat which was built by the same company for the B. C. government. The plane will have a Curtiss 100 H.P. engine.

Sale of All Government Stocks

A recent despatch from London, Eng., says: Negotiations are at present in progress for the purchase by a wealthy syndicate of the entire stock of timber remaining in the hands of the Timber Control Department of the Board of Trade. The amount involved is said to be in the neighborhood of £7,000,000. During the last 14 months the Timber Control Department has disposed of a considerable part of its stocks to merchants and manufacturers, but the amount still in its possession is very large. This timber, some in the round and some in various stages of conversion, lies in many parts of the country, and includes practically every home-grown variety cut for war purposes.

Personal Paragraphs of Interest

B. H. Dunfield, of Dunfield & Company, Limited, Halifax, was a recent visitor to Montreal.

Geo. Miller, of Miller & Frere, lumber dealers, Montreal, P. Q., recently passed away in that city.

W. H. Thompson, manager for E. J. Maxwell, Limited, Montreal, spent a few days in Toronto recently on business.

Hugh Blair, of Blair and Rolland, Montreal, is now in the Laurentian Mountains, recovering from an attack of influenza.

J. B. McKenzie, North Tonawanda, N. Y., was in Toronto recently, calling upon the members of the trade.

Wm. Power and John Levie, of W. & J. Sharples, Reg'd., lumber exporters, Quebec and Montreal, are now on a visit to England.

E. H. Lemay, wholesale lumberman, of Montreal, has contributed \$25,000 to the fund being raised for the new University of Montreal.

Duncan McLaren, president of the Union Lumber Co., Toronto, and wife, are spending some time in Sea Breeze, Florida.

The death occurred recently at Morin Heights, P. Q., of Mrs. John Middleton, mother of Mr. J. P. Middleton, managing director of the Argenteuil Lumber Company, Limited, Morin Heights.

William Cuthbert, formerly tie agent of the Grand Trunk Railway, died recently in Florida, aged 63 years. He retired from the company in 1911.

A. E. Gordon, of Terry & Gordon, Limited, Toronto, who has been spending several weeks in the Old Country on business, has returned home.

A. C. Manbert, of Toronto, president of the Canadian General Lumber Co., spent a few days recently on a business trip to New Brunswick.

W. B. and Oswald Blair, of Blair and Rolland, Montreal, attended the annual convention of the National Wholesale Lumber Dealers' Association at Washington, D. C.

The offices of J. G. Cane & Co., which suffered from smoke and water in the recent fire at the McKinnon building, are now located on the thirteenth floor of the Bank of Hamilton building, Toronto.

A. W. Barnhill, of Mason, Gordon & Company, Montreal, has just returned from a visit to the Maritime Provinces. He reports that business conditions are good, and that a large cut is expected.

L. B. Beale, British Trade Commissioner of Winnipeg, formerly B. C. lumber commissioner, with headquarters at Toronto, spent a few days recently in the East, calling upon his many friends in the trade.

James G. Cane of Toronto, who was injured owing to an upsetting of a sleigh while attending the Canadian Lumbermen's Association convention in Quebec City, and had his shoulder-bone broken, is able to be around again after confinement to his home on Delaware Ave. for several weeks.

Chas. W. Restrict, president and founder of the Restrict Lumber Co., Detroit, Mich., died recently in that city, aged sixty-three years. He was born in Otterville, Ont., but had resided in Detroit since 1872 and organized the firm which still bears his name. He is survived by his wife and four children.

Greig, Morris & Co., wholesale lumber merchants, who were burned out in the recent fire in the McKinnon building on Melinda St., Toronto, are now at 23 Jordan St. until repairs are completed to the upper storeys of the fire-swept structure, when they will again be back in their old quarters.

Mr. and Mrs. James Whalen arrived recently in Vancouver from California where they had been spending a holiday. Mr. Whalen is chairman of the board of directors of the Whalen Pulp and Paper Mills, Ltd., of Vancouver, president of the Port Arthur Shipbuilding Company and interested in a big paper mill which is being erected at Los Angeles.

Among those who attended the annual meeting of the National Wholesale Lumber Dealers' Association at Washington recently were C. W. Wilkinson and H. C. McDermid of the Union Lumber Co., H. J. Terry of Terry & Gordon, Walter C. Laidlaw of the R. Laidlaw Lumber Co., and Horace Boulton, secretary of the Wholesale Lumber Dealers' Association, Toronto, who was sent as the delegate.

The many friends of Mr. W. E. Gunter, vice-president of Murray & Gregory, Ltd., St. John, N. B., will sympathize with him in the loss of his wife, who passed away recently after a short illness from pneumonia. Mrs. Gunter was held in high esteem and took a keen interest in promoting all charitable and philanthropic work. She is survived by her husband, three sons and one daughter.

Joshua Murphy, son of the late Edward Murphy of Portage du Fort, P. Q., died recently in Vancouver. He was born and spent his early manhood in the Ottawa Valley. A number of years ago

he went to British Columbia where he occupied important positions in the lumber industry. He is survived by a widow, seven daughters and one son.

G. A. Grier & Sons, whose Toronto offices were on the fifth floor of the McKinnon building, have removed to St. James Chambers, corner Church and Adelaide St. E., Toronto. G. A. Grier & Sons will also occupy their former quarters as soon as the necessary repairs following the recent fire are carried out.

Hugh Cameron, who has been representing the Canadian Western Lumber Co. at Edmonton, has been transferred to Winnipeg, succeeding H. W. Dickie, who passed away recently from pneumonia. T. R. Griffith has been appointed representative of the Canadian Western Lumber Co. at Edmonton, in the place of Mr. Cameron.

E. A. Lewis passed away recently in St. Thomas, Ont., in which city he spent the greater part of his life. For thirty-five years he was engaged in the lumber and coal line with the late George Ellison who died two years ago. Mr. Lewis continued the business until his death. He was born in Yarmouth Township, Elgin County, in 1853, and leaves a wife and one daughter. Mr. Lewis was a prominent citizen of St. Thomas and one of its leading business men.

Mrs. Boulton, wife of the late Wm. Boulton, C.E., and mother of Horace Boulton, Toronto, secretary of the Wholesale Lumber Dealers' Association and the Ontario Retail Lumber Dealers' Association, passed away recently at the age of 77 years. She was the daughter of the late Dr. Mulock of Bond Head and a sister of Sir Wm. Mulock. Mr. Boulton who died at her home 73 Walmer Road, Toronto, for many years took a great interest in all social welfare and benevolent organizations. A handsome floral wreath was sent by the Wholesale Lumber Dealers' Association, Inc.

Consolidating the Plant at Thorold

The Beaver Wood Fibre Co., of Thorold, Ont., have just completed the erection of a new finishing department, 125 x 362 ft., of brick, steel and concrete, and have removed their plant, which is located near Ottawa, to Thorold. The entire work of dismantling the Ottawa unit, the loading of machinery on the cars to Thorold, and unloading it, took less than ten days, which is considered a remarkably expeditious record. A new laminating plant has just been put in operation at Thorold and the output is now 5,000,000 square feet of finished board per month. Twenty houses are being completed for the employees and about 100 extra hands will be employed in the new department. The plant at Ottawa formerly supplied the Canadian and export trade, but has not been able to furnish the finished Beaver board in sufficient quantities for either home or foreign demand, and a large part of this trade has been handled through the Buffalo factory. All Canadian and export demands will now be made through the Thorold operation.

Eyer Lumber Co. Continuing Business

The business of the Eyer Lumber Co., Limited, 34 Victoria St., Toronto, at the head of which was the late John H. Eyer, will be conducted through the present operating season and perhaps longer, under the management of Gilbert S. Lay, who has been associated with the firm for the past eight years. The Eyer Lumber Co. specializes in red and white pine, spruce and jack pine. Mr. Lay is one of the oldest lumber travellers in Western Ontario, having covered that ground for the past twenty years. He was associated with the R. Laidlaw Lumber Co. for twelve years and in 1912 became identified with the late Mr. Eyer. Previous to coming to Canada he was engaged in the lumbering line for ten years in New York State, and is familiar with the business in all its varied activities.

Death of Parry Sound Lumberman

Parry Sound recently lost another well-known citizen by the death of Mr. J. N. Williams. He was born at Deerfield, Mass., about seventy-two years ago and resided in his native country until he came to Parry Sound about 1901, when he joined the Parry Sound Lumber Co. as manager of its mills and yards, and was associated with the same company up to the time of his death. He leaves to mourn his loss his widow, one daughter, Miss Jess, and one son, Rowe Williams.

The passing of Mr. Williams was very sudden and unexpected. He had been intimately associated with the business life of Parry Sound for so long and was so generally popular that his absence from circles in which he was familiar will for a long time be keenly felt. Lieut.-Col. J. B. Miller, president, and W. B. Tindall, secretary-treasurer of the Parry Sound Lumber Company, went up from Toronto to attend the funeral.

Able Review of the Eastern Lumber Situation

President Snowball of New Brunswick Lumbermen's Association Points Out Prices Have Not Kept Pace with Added Cost of Production—New Officers Elected

The annual meeting of the New Brunswick Lumbermen's Association was held on March 18th at Fredericton, N. B. There was a large and representative attendance and the proceedings were characterized by much interest and enthusiasm.

W. B. Snowball, of Chatham, who has been president of the Association, retired, and was accorded a hearty vote of thanks for his services during his term of office. The following officers were elected for the coming year:

President—Donald Fraser, Plaster Rock.

Vice-President—William Richards, Campbellton.

Secretary-Treasurer—R. W. McLellan, Fredericton.

Executive—W. B. Snowball, Chatham; F. C. Beatteay, St. John; Donald Fraser, Plaster Rock; J. W. Brankley, Chatham; William J. Richards, Campbellton; W. Garfield White, Sussex; Angus McLean, Bathurst; James Robinson, Millerton, and Geo G. King, M. L.A., Chipman.

The retiring president, Mr. Snowball, delivered a timely and interesting address in which he reviewed conditions in the lumber arena from many standpoints, and spoke of the progress that had been made in various directions. Mr. Snowball referred to the advances in cost of production, the operation of the Compensation Act, the Safety First movement, the necessity of conservation and more efficient protection from forest fires. His remarks, which are as follows, will be read with much interest:

We are pleased to welcome so many at our annual meeting and trust that the subjects discussed may be productive of good, not only to the industry that that we represent, but to our whole province. There is no doubt but the manufacturers of the forest products of New Brunswick represent the most important industry in our province and we should be men of broad vision, men who are willing to forego the immediate gain to assure the continuance of the industry that not only provides the greatest employment, but on which practically all the industries and trades, and even farming, depend.

Conservation in our forest cutting should be our great slogan—not curtailment, but so cutting our logs that the most can be got out of them, and the bringing out of as much of the trees as can be utilized in saw, pulp or lath mill and in every way co-operating with the Crown Land Department or private owners.

Conservation should also be insisted upon in all our mills and a study made to economize and also to the greater utilization of waste. Some effort should be made to bring before our men in woods or mill the great necessity of conservation and to impress them with the importance from their standpoint of co-operation with their employers to bring about the very best results.

Our great enemy, fire, in timber lands or plants, should be guarded against and our employees educated to assist in every way to prevent this menace. A little intelligent care can do a great deal in this direction, and while all fires may not be avoided, still a great improvement may be accomplished.

The destruction in our forests caused by the b'ud-worm cannot be overlooked. We must do all we can to remove the damaged trees while still valuable, also to assist the department in eradicating this destructive insect. This is a subject I would like to have discussed.

Making Working Conditions Safe

Safety first in our logging, driving, rafting and milling should be impressed on our men, not so much to avoid accidents for the sake of reduced premiums, but for the conservation of our man power and the greater working efficiency.

Every mill and factory owner should do all possible to make working conditions as pleasant and safe as possible.

A harmonious and friendly understanding between employer and employee—each feeling a real interest in the other—will do more to stabilize conditions in our country than any penance so far suggested.

All efforts to create animosity between so called capital and labor should be discountenanced by both parties. The most friendly relations have so far existed in our part of the Dominion and will continue to do so, if agitators are known as such. Each is essential to the other and both unselfishly working together combine to produce a prosperous, happy country. May it long continue so in New Brunswick!

Operation of the Compensation Act

Your directors have not been idle during the past year. In June we were advised that woodsmen and river drivers would be brought under the operation of the Compensation Act on the 1st of August. This was not anticipated. On the 9th of July, we met Mr. John Sinclair and Mr. Sugrue at the Miramichi Hotel in Newcastle and had a satisfactory interview with them, and rates were agreed upon for the first season. On the 25th of September, we had a general meeting in St. John, when matters of interest were discussed fully, and a committee consisting of Fred Anderson, Campbellton; Angus McLean, Bathurst; Fred C. Beatteay, St. John; J. W. Brankley, Chatham; Donald Fraser, Plaster Rock; Stanley Douglass, Fredericton, and W. B. Snowball, Chatham, was appointed to meet the government and discuss several matters with them.

W. B. Snowball, Chatham, N.B.
Retiring President of Association

Donald Fraser, Plaster Rock, N.B.
New President of Association

R. W. McLellan, Fredericton, N.B.
Secretary-Treasurer of Association

At a later date the above committee met the government and discussed the following:—

- (a) The advisability of fixing stumpage for a period of ten years, as in Quebec.
- (b) The adoption of a more equitable log scale, and suggested the present Quebec scale.
- (c) The matter of fire protection being placed in the control of the limit holders.

(d) The question of the department scaling the logs and putting operators to the expense of boarding scalers and horses, when the operator had to keep scalers himself in the woods and submit to sworn statement of his cut.

The government gave your committee a sympathetic hearing and discussed fully the several suggestions made.

Intimation was given during last season that the Minister of Lands and Mines intended having a conference with the licensees, but although we communicated with the Minister in August last, he has not yet named a date.

Reduced Working Hours in Mills

During the past season, many mills in the province were compelled to adopt a nine-hour day. Saw mills can only run some six months of the year and this makes a very short working day for such a large expenditure of capital as represented in the larger saw mills. If these mills were run night and day, as the shorter working day would warrant, it would mean a very short sawing season, as most of the mills cannot increase their supply of logs without depreciating very quickly their lands and thus curtailing the life of the industry.

Since our last meeting, two of our directors, men who took a great interest in the working of our association, have passed to the Great Beyond, namely, Daniel Richards and J. B. Gregory. We revere their memory and express our sympathy to their sorrowing families and friends.

It has come to our notice that some pressure is being brought to bear on the Board of Commerce to induce them to prohibit the exportation of lumber, owing to the present shortage of supplies. We think some action should be taken to show our disapproval of any steps being taken that will hamper trade. In our opinion, such action would mean ruination to our trade.

The University of New Brunswick has a Forestry Branch in connection with their institution. We all realize the need of technically trained men in all branches of industry, and perhaps no industry requires this more than our own. We would ask the hearty co-operation of the trade to this branch and I am sure any suggestions that would make the work more practical would be welcomed by the faculty.

Why Lumber Prices Are High

In some quarters we hear criticism of the great advance in the price of lumber, and those unaware of the real reason, blame the lumbermen. It is well for us to be prepared to show good reasons beyond our control for the advance which, however, is not as great as that of many other commodities.

In 1913, stumpage was \$1.50 and mileage \$8—today we pay \$3.50 stumpage, \$8 mileage and \$3.20 per mile for fire protection, also we have workmen's compensation of logging, river driving, rafting, milling and loading, with a separate rate on each, and this still further adds to the cost; in addition, we have the heavy business Dominion war tax.

In 1913 the provisions that enter into a logging operation cost:

	1913	1919
Flour	\$ 4.90	\$11.20
Tea23	.45
Beans	2.05	4.90
Molasses38½	1.00
Beef	20.00	27.00
Pork	26.00	48.00
Lard11½	.27
Hay	13.90	27.00
Oats51½	1.10
Axes	7.50	15.25
Peavies	15.25	25.50
Cross Cut Saws	2.58	4.75
Oil (paraffin)19½	.24½

In 1913 men's wages were \$28 to \$32 per month; in 1919 men's wages were \$70 to \$85 per month.

This same condition of wages applies to the saw mills, and in addition, we have a nine-hour day, or 1-10 reduction in time; and in both woods and mills, the labor is less efficient than before the war. Belting, saws and mill oils are also about double in price.

While there is practically a 100 per cent. advance in the articles

that enter into cost, lumber has not advanced in the same proportion.

Since writing the above a discussion of this subject has taken place in the Legislature and a suggestion made that stumpage should be \$7 per thousand and intimation given that the profits for some years have been \$15 to \$20 per thousand. When intelligent persons make these statements it shows how necessary it is to correct such erroneous views. I do not know of anything approaching such a margin on the North Shore. When it is considered that on the North Shore of New Brunswick there are long portages costing as high as \$40 per ton; drives are expensive, also high rafting charges, it can easily be seen that any such increase in stumpage cut very materially, throwing men out of employment in woods and would ruin the lumber trade in our part of the province, reduce the mills, and bringing disaster to our district.

An interesting discussion followed the presentation of Mr. Snowball's address. The retiring president stated that, while there had been practically 100% advance in the articles that enter into the cost of lumber, that product itself had not advanced in the same proportion. He also added that in 1913 the wages of men were from \$28 to \$32 and to-day the range was from \$70 to \$85, while the charges for all kinds of supplies had shown an enormous increase.

Dr. C. C. Jones, chancellor of the University of New Brunswick, addressed the association on behalf of the Forest School of the university. He spoke appreciably of the work being carried on at the institution, at which there are some seventy students, many of them returned soldiers, who have taken special courses under the Department of Soldiers Civil Re-establishment. The suggestion was made that the lumber companies should absorb as many of these men as possible in their organizations, thus affording them the practical training needed to go with the theoretical knowledge which they would acquire through their courses.

Hon. J. P. Burchill, of South Nelson, discussed the proposal that operators should be responsible for having all employees vaccinated when entering on lumbering or stream driving operations. It was pointed out that such a provision was not practical and imposed a burden upon the lumbermen which they would be unable to carry out. It was decided to bring the matter to the attention of the provincial government and seek to have it satisfactorily arranged.

The members of the association waited upon the provincial government and discussed with that body matters relating to the Workmen's Compensation Act and the vaccination provisions of the Public Health Act.

Increase in Stumpage Rates Rejected

Hon. J. A. Murray, leader of the Opposition, moved an amendment to the address in reply to the Speech from the Throne in the New Brunswick Legislature, recently, calling for an increase in the rate of stumpage upon lumber cut on the Crown Lands, from \$3 for fir and \$3.50 for spruce, to \$7 per thousand feet.

Only the day before Fred Magee, of Westmoreland, the chief whip of the Liberal party, in moving the address, had spoken strongly in favor of increasing the stumpage rates to bring in a revenue that would come nearer to meeting the requirements of the administration, which admits a deficit of \$327,686 on the past year's operations.

It has been generally known for some time that the United Farmers of New Brunswick have been spurred on to action in provincial politics largely because of their disagreement with the policy of a lower stumpage on Crown Lands, than private owners collect.

Vote on the Murray amendment, which favored higher stumpage rate for the province of New Brunswick, was taken later and lost by a vote of 24 to 14. It is notable that Mr. Magee and Mr. Robinson (Government), who have advocated an increase in stumpage rate, voted against the amendment.

Lumber from Alaska to Australia

Possibilities of the lumber market with the Antipodes are indicated by recent mail advices from Australia, which state a firm in Sydney has entered into a contract with a lumber firm in Alaska for 50,000,000 feet of lumber. The names are not given, but it is stated further that the buyers have the option of extending the order to 90,000,000 feet, and stipulates that eighty per cent. of the lumber must be spruce and the rest hemlock. Just how this large amount of lumber will be transported is another consideration, and naturally difficulty is expected, as it would take fifty-nine ships, each carrying one million feet. Even British Columbia owned wooden ships would be welcome in this matter, and such a contract would offer business for some months. It is not expected that the shipments will be made immediately, but will extend at least over a year.

Many Lath Mills Are Being Installed

Manufacturers All Declare There is Great Rush for Equipment—Production Will Be Large

The demand for lath and shingle mill equipment has been very active during the past few months, owing to the shortage in these lines of forest products, and especially lath, which has brought very high prices. Reports from the various companies specializing in this end of machinery are to the effect that the number of requisitions were never as great as they have been during the past winter.

The William Hamilton Co., of Peterborough, say that they never have had so many orders at one time for lath mill machinery as now. They find that it is almost impossible to keep up with the business at all. While most of these orders are for lumber concerns a few of them are for other parties who are devoting their attention to the lath industry alone. The demand for shingle machines is not quite so strong and most of the inquiries for these equipments have of late come from the Maritime provinces. The bulk of the lath mill installations is going west to Winnipeg and through to Alberta and Saskatchewan, and it looks as if the prairie provinces were taking the matter of lumber and lath industry a little more seriously.

G. Walter Green Co., Ltd., of Peterborough, have also the same experience to relate, and remark that they have never had such a heavy demand for this line of machinery, and more particularly lath mills. They attribute the latter partially to the fact that they have a most successful outfit for manufacturing lath direct from round material. This is what they call their No. 2 combined lath mill and bolter. The company add that previous to such machines being manufactured lath were only made from slabs, but since the No. 2 has been put on the market it has enabled a man with a small block of timber to set down his outfit and manufacture his lath right from the log. The company have a large number of orders for this machine on their books at the present time.

The Garlock-Walker Machinery Co., of Toronto, state that they have been receiving large numbers of orders and inquiries for equipment suitable for lath and shingle mills from all sections of the country and that the demand has been very brisk.

The P. Payette Co., of Penetanguishene, remark that they do not deal in shingle mill equipment, but so far as lath mills are concerned, they have had a large number of inquiries every day for the past three months, and Mr. Payette adds that if they had a factory twice as large as they now possess, they could keep it going. As it is, they are working night and day to get out orders and still do not know if they will be able to fill all their contracts. Mechanics are scarce and material is still scarcer. The epidemic of flu, which raged in that section and was particularly severe this year, also kept back production to a certain extent. The Payette Co. add that not only are sawmills putting in these lath mill outfits, but many independent parties are going into the business who never knew what a lath mill and bolter was before.

The E. Long Mfg. Co. of Orillia, report that they have had a tremendous demand for shingle and lath machinery and especially lath. While they have had a number of inquiries from firms, not formerly in the lumber business, the most of their sales have been made to lumber manufacturers. They have not been able, by any means, to supply the amount of machinery required, although their plant has been working to full capacity and overtime as well.

Wants Chaplain in Lumber Camps

A query as to why the lumber magnates can't provide a chaplain for their men in the lumber camps, the same as the Government supplies them for the soldiers in the army, featured an address by Rev. Thomas Joplin, field secretary of the Shantymen's Christian Association, at the Fireside Meeting in the Y.M.C.A. recently in Ottawa. There are 50,000 shantymen in Ontario and 350,000 in all Canada, and in almost every case the Shantymen's Association looks after the religious needs of the men. This was a large task, and many missionaries travelled 30 or 40 miles a day with about 50 pounds of literature for distribution. They had no fixed salaries and depended on contributions from the public. In the case of isolated families, services were very few. On one occasion no service was held in six years, and the nearest doctor was 400 miles away.

No Lumber Slump is Probable

"This is not a question of loyalty to Canada, of Canadian mills supplying the Canadian people with lumber before exporting. That will be safeguarding anyway. It is a question of maintaining a market for the Canadian surplus. It has to be remembered that the Canadian demand for lumber is spasmodic, and, when that demand is slight and she has no regular outlet for her surplus, her mills will soon pile up surplus lumber. That is just where the American market comes in; it is able to take the surplus and prevent depression in the lumber industry."

This expression of opinion was made recently in Vancouver by Mr. A. L. Clarke, president and founder twenty years ago of the Vancouver Lumber Company, president of the important Southern Pine Association, president of the A. L. Clarke Lumber Company and other U. S. lumber organizations.

"If Canada—and particularly B. C.—had no permanent market like the United States ready to take her surplus lumber products she would inevitably have serious periods of depression," asserted Mr. Clarke, "and depression in the lumber industry in a province like British Columbia, where it plays such an important part, will react upon every other industry, upon store-keepers and, in fact, every department of life. If the Canadian demand were steady it would be a different thing. Surely it would be unwise for Canada to alienate the United States market, which is so valuable to her when her own demand reduces. It is just like the United States cotton industry in the south—England and other countries take the surplus."

The Eastern Pulp Outlook Reveiwed

Word received from New Brunswick regarding pulpwood production in that province is to the effect that peeled spruce and balsam is commanding from \$10.00 to \$12.00 per cord, f.o.b. cars, which is about two dollars less than the prevailing figure in Ontario.

In regard to the larger call for poplar, it is stated that one company have a strong hold in the pulpwood situation in New Brunswick owing to the fact that they are the only people who can or will use poplar. A farmer or small operator, in getting out his pulpwood—say, on an average, from 50 to 100 cords, naturally cuts as he goes along, a certain amount of poplar, and he refuses to dispose of his spruce unless his poplar is also taken. It is easy to understand, therefore, how any company, which takes both spruce and poplar, control the situation. Thousands of cords of pulpwood are made in New Brunswick every year by farmers and small operators, who are subject to the conditions already pointed out, says a correspondent of the "Canada Lumberman," who adds:

It would be interesting to know what the prospects are in endeavoring to get an opening elsewhere for New Brunswick poplar. If the mills of Ontario and Quebec would be willing to use this wood along with spruce, it would prove of much benefit to the small pulpwood producers in New Brunswick.

If the experiments of using hardwoods in the manufacture of paper are successful, there are immense quantities of such wood in New Brunswick, which, at the present time, has not much better use than for firewood. There is also no doubt that the pulpwood business is sooner or later going to be revolutionized in that the bark will have to be removed by machinery, as labor is getting scarcer every year and cannot be found in sufficient quantities to go into the bush and peel the bark. In the interests of greater production, equipment will be installed to attend to this most important branch of pulpwood activity.

Putting Sawmill Waste to Profitable Use

S. P. Grey, of Indianapolis, Ind., in an interesting letter to the "Canada Lumberman," on the utilization of sawmill waste, says: We are in hearty accord with your views of the lumber situation and only wonder at the lack of conservation of waste material. Around every sawmill of any importance more real wood pulp goes to waste than would stock a good sized paper mill. People go into the forests and cut the heart out of the beautiful trees and throw away the saps and limbs and tops instead of conserving the timber supply by grinding them into pulp. That is what makes us pay 10 to 20 cents a pound for print paper that could be made from all this waste and sold for a profit at half the prevailing prices.

At a large mill which had accumulated not only a mountain of slabs and edgings in the very heart of this country, but had also accumulated a handsome debt, the writer made a suggestion that they get the edging and slab pile out of the way even if they had to set fire to it or dump it into the river. But the answer was: "We wish we could do either, but in either case we would become amenable to the law as damaging the river or endangering the city."

Well then, we had to think again, and advised them to burn their saw dust as made and work all their new waste into some useful article such as blacking-brush backs and handles, and the hardwoods into all handles, and a few dozen other things for which new timber is now being used. This they did and found it so profitable that not only did their debt soon dwindle and disappear, but also the old slab pile, which was such a menace.

The writer has since put into service many other similar plants from which millions of lath, pickets, dimension stock and even shuttles and bobbins for our cotton mills make a ready market. The material which you wish to make into furnished products must correspond to the wood used for that purpose, and if carefully looked into, can soon be selected and classified so as to make what is now called waste pay all running and labor expenses of the mill.

An Aggressive Eastern Lumber Manufacturer

Stanley Douglass, Fredericton, N.B.

Stanley Douglass, Fredericton, N. B., has been connected with the lumber game for the last 25 years. He will cut about 6,000,000 ft. of spruce and hemlock lumber during the coming season, besides lath and shingles at South Devon. At Stanley, his output will be 3,000,000 ft. of spruce and hemlock. The latter plant has started running and sawing will begin at South Devon about May 1st. Mr. Douglass' logging operations are now complete for the year and he says that they have a somewhat larger cut of logs for both mills than they figured on, and that the total output will be some 10,000,000 ft. From February on they had a severe winter which added considerably to the cost of the logging. Mr. Douglass adds that weather conditions have been unfavorable for sawing

with portable mills and the product of a great many logs will not go on the market this year. In the district around South Devon and Stanley there has been a somewhat larger cut than last year, and a considerable quantity of this has been turned out by portable saw mills. Mr. Douglass is also the head of a new company, known as Stanley Douglass, Limited, with headquarters at Devon, N. B., which was recently granted a provincial charter. He is one of the most successful operators in New Brunswick.

High Wages Paid Lumber Carriers

The members of the Executive Committee of the Lumber Carriers' Association of the Great Lakes have adopted a scale of wages for masters, mates, chief engineers and assistant engineers on boats belonging to members of the association during the season of 1920.

The schedule for masters and mates on wooden steamers follows:

Steamers of 600 tons and over—Master, \$2,500 per annum; mate, \$200 a month.

Steamers less than 600 tons—Master, \$2,500 per annum; mate, \$180 a month.

Schedule for chief engineers and assistant engineers is:

Steamers of 1,000 tons and over—Chief engineer, \$225 a month; assistant engineer, \$190 a month.

Steamers of 500 tons and less than 1,000 tons—Chief engineer, \$215 a month; assistant engineer, \$165 a month.

Steamers of less than 500 tons—Chief engineer, \$200 a month; assistant engineer, \$165 a month.

This is the highest rate ever paid.

Timber Exploitation Must be Avoided

In Canada, particularly in Quebec and British Columbia, there still is a large supply of timber, and in Quebec the Crown forests are the envy of the Continent. In New Brunswick our extensive Crown lands are of immense value, and with reasonable conservation will increase in value as the years go by. But for New Brunswick and for all Canada the exhaustion of the American forests must be a reminder of the wisdom of avoiding in time the American mistake of exploitation without limit. So far as the Crown forests of Canada are concerned, the Provinces must not eat up their capital, but must live upon the interest, content to cut no more annually than growth will replace, and even to so limit the annual operations that the forest reserve will be gradually enlarged. There could be no better investment. To increase this asset is banking money at a high rate of interest. Moreover, there is to be considered the influence of the forests upon stream flow, and so upon agriculture. A very large portion of our land is unfit for agriculture, but will grow merchantable timber.

The United States can scarcely expect that their wood famine is to be cured by free access to our forests. On obliging them we should only create a wood famine of our own. The Canadian Provinces should proceed with a reasonable policy of conservation, having in mind the example of their neighbors.—St. John Telegraph.

Sudden Death of Henry Rixon

Owen Sound recently lost one of its oldest and most highly esteemed business men in the death of Mr. Henry Rixon. Mr. Rixon retired as usual, apparently in good health. About 7.30 o'clock the

following morning he was found dead in bed, the end having come as he slept an hour previous.

The late Joseph Rixon was an English gentleman of the old school; kindly, courteous and beloved by all who knew him. He was 83 years of age and was born at Krugswood Place, South Lamberth, London, England. He had resided in Owen Sound since 1888, when he formed a partnership with the late James Rixon, under the firm name of Maitland, Rixon & Co., in the lumber and war-finger business. For many years they operated the large mill at the North End and also the wharf now in the hands of Jas. Cole. Several years ago the mill was taken over by the Rixon, Ainslie, Stoddart Co., Ltd., of which the deceased was one of the principals. Although well advanced in years Mr. Rixon always kept in touch with his business and was more or less actively engaged in it.

During his many years of residence in Leith and Owen Sound, Mr. Rixon made for himself a warm place in the hearts of many of its residents by his kindly, courteous ways and he will be greatly missed by all who knew him.

Fifty-four years ago he married Miss Helen Ainslie, daughter of the late Adam Ainslie, of Leith, who predeceased him seven years ago. Of the family of five daughters and one son, three survive

Lumber Prices Affect Farmers

British Columbia farmers and ranchers are feeling the pinch of lumber prices. Some settlers have restrained from building until values moderated, only to find them increasing with the coming of better weather. Many are hauling their own logs to the mills so badly are they in need of rough lumber for operations on their farms and ranches. Shingle bolts that have been lying for years are now drawing at a much increased figure.

Timber Industry is Decidedly Active

Great activity is going on in the timber industry as reflected in the statement of timber royalties, the sale at a record price of a government timber berth on Ramsey Arm, and the advertising in a recent issue of the B. C. Gazette of timber sales totalling \$670,000.

Timber royalties for the 11 months of the current fiscal year have reached \$795,480, being \$60,475 in excess of last year, in spite of the absence of last year's aeroplane spruce purchases.

The record for stumpage prices was reached yesterday, when 225 acres of cedar and fir at Ramsay Arm were bought from the government at a price of \$5.30 per thousand for the cedar and \$4.10 for the fir, netting the government \$160 an acre for the stumpage rights.

The largest sale yet advertised by the timber department is in the Gazette, where intending buyers have asked that timber valued at \$522,000 in the Kamloops district be advertised for bids. Other requested sales bring the total up to \$670,000.

Are Not Holding Back Supplies

Denying that British Columbia lumber merchants are in any way favoring United States buyers over Canadian ones, and characterizing as absurd the Prairie allegation that United States mills are holding back their own product to boost prices and buying up the available Canadian supply. I. R. Pole, Secretary to the Mountain Lumber Manufacturers' Association, B.C., stated that recent despatches from Ottawa and Winnipeg suggesting the possibility of a lumber embargo to prevent further lumber exports to the United States, were misleading.

Thinks the Peak Not Yet Reached

"Production is what we want. We need it so bad that it is worth paying for and paying well," declared Mr. Carl Sorenson, of Fort William, who recently returned from a visit to St. Paul, where he met his brother who is connected with shipping in the Orient. Mr. Sorenson is certain that higher wages must be paid in lumber camps next season. Mr. Sorenson has operated a lumbering camp during the winter, and paid top prices and is willing to pay top prices next year with bonuses to good men. Carpenters and bricklayers will find all they can do at a dollar an hour, maybe more. The peak has not yet been reached, and I do not think that it will be before one or two years. Americans do not anticipate any lowering of prices and building operations are not being postponed in expectation of the easing off in labor or building markets.

"He seems very fond of his wife."

"Very. Doesn't even find fault with the way she's bringing up the children."

"I presume the violin is the most important instrument in the orchestra."

"It was until the jazz came in. Now it's the cowbell."

An Authority on Export Timber Trade

H. R. MacMillan, Vancouver, B.C.

H. R. MacMillan, managing director of the H. R. MacMillan Export Co., Ltd., general exporters, Vancouver, B. C., has long been one of the leading figures in forestry, lumber and other activities. Born in Newmarket, Ont., thirty-five years ago, he was educated at Toronto University, and afterwards took a post graduate course at Yale. He was assistant director of the Forestry Branch, Department of the Interior, Ottawa, in 1911, and was appointed Chief Forester for British Columbia in 1912, which position he filled efficiently for three years, when he was made Timber Trade Commissioner with the Department of Trade and Commerce, Ottawa. In 1916 he became assistant manager of the Victoria Lumber Mfg. Co. and also organized Georgetown

Spruce & Cedar Co. of which he is the President. He was assistant director of the Imperial Munitions Board from 1917 to 1919.

A year ago Mr. MacMillan formed the H. R. MacMillan Export Co., of which he is managing director. He has been an extensive traveller and has officially visited all quarters of the globe looking into timber demand, production, distribution, etc., and has written a number of excellent articles for the "Canada Lumberman" and other publications.

In the Export Edition of the "Canada Lumberman," which was issued a year ago, Mr. MacMillan had a timely and instructive contribution on the export trade so far as it affected British Columbia. He ably pointed out the various markets which were open for Coast products and what that province could supply, the effect of the war on the rise and fall of the timber trade with different countries, etc.

The subject of this reference is the author of "Reports of Foreign Timber Trade" for the Dominion Government, and has prepared for the B. C. provincial administration a series of edifying and interesting reports of forest management and the timber trade. Mr. MacMillan also framed the "British Columbia Timber Royalty Act."

Why Did B. C. Not Handle All the Order

Welcome was given by the council of the Board of Trade to Mr. F. C. Wade, K.C., agent-general for British Columbia in London, at a luncheon held in his honor at Vancouver, recently. Mr. Wade, in telling of the work of his department, explained the need for British Columbia to make an effort to attract the immigrants who were seeking new locations in the Empire. He also spoke of the handicap which agents-general for the different provinces were confronted with in not having official recognition, as did the agents-general for the Australian states.

In illustrating the manner in which the lumber order had been secured last year for British Columbia mills, Mr. Wade stated that at first it was refused owing to the fact that Washington exporters offered railway ties at twopence cheaper. This had made him angry and he remained the government that when Canada decided to enter the war, every dollar and every man was promised without hesitation.

"I told them that 'tuppence' did not stop us then," said Mr. Wade. The result was that instead of placing an order with British Columbia mills for 100,000,000 feet of lumber, the amount was increased by 50 per cent. and that the price was raised from three shillings three-pence to three shillings six-pence. He could not understand why British Columbia mills had refused to handle the whole order, throwing away 80,000,000 feet of it.

In urging that every effort be used to bring about a closer relationship between the lumber supply of the province and the demand of Europe, Mr. Wade stated that a British concern was contemplating putting into service a line of twenty-two ships to carry lumber from British Columbia if the exporters would go after the market. This would be a permanent market for the next thirty or forty years.

Lumber Shipments from Eastern Ports

Formerly many ports in New Brunswick were active shipping centres for timber and lumber, but rail connection and extensions, as well as the evolution which the industry has been undergoing in recent years, have made considerable changes.

The "Canada Lumberman" has received reports from a number of harbor masters, some of which are encouraging, while others tell a different story. H. W. Crocker, Harbor Master of Albert, N.B., says there have not been any vessels loaded at that port for the past two years, all lumber going by rail to St. John for trans-Atlantic shipments. E. Chase, Harbor Master of Sackville, writes there has not been a vessel in there for the past two years. "We formerly had about fifty ships come into this port each shipping season, but the rails have all been taken up so there is no track to the wharves. There are deals and other lumber sent on the trains at Sackville station," he adds.

James Wallace, Harbor Master of Dalhousie, states that in 1918 there were no vessels in that port and no shipments made. In 1919 there were eleven vessels of 18,092 tons carrying 11,466,316 superficial feet of deals and 10,519 cors of rossed pulpwood.

James A. Jardine, Harbor Master of Richibucto, observes that lumbering was carried on very extensively during the past season, and that one of the most up-to-date mills in New Brunswick will be running this year at that point and the prospects are for a large shipment of lumber. During 1919 three vessels totaling 826 tons carried 600,000 superficial feet. There was shipped by water to other parts of Canada, chiefly to Prince Edward Island, about 1,435,000 feet.

R. J. Walls, Harbor Master of Chatham, N.B., remarks that they had fifty-six vessels on the Miramichi with a tonnage of 60,799 registered tons. H. R. Goodday & Co. loaded ten steamers and one sailing vessel carrying 22,196,131 sup. ft. for the United Kingdom and the Continent. The J. B. Snowball Co. loaded five steamers carrying 8,354,000 superficial ft. for Great Britain and Europe, and also shipped 11,883,000 to the United States. The Miramichi Lumber Co. shipped some 12,000,000 superficial ft. from the port of Chatham. Mr. Walls adds that the prospects for the coming season are good with plenty of manufactured lumber on hand if transportation is available.

Veteran Woodsman Found in Hunter Camp

Mr. Robert Hunter, of Parker's Ridge, who was sent to the Miramichi woods, recently, to search for "Uncle Henry" Braithwaite, of Fredericton, N.B., returned to Holtville lately with the welcome news that the veteran guide was alive and well, and would be home in about a fortnight. Mr. Hunter and a companion made the journey on snowshoes and came upon the object of their search at the Hunter camp, twenty-six miles from the settlement. The old gentleman, as usual, had a good supply of "grub" on hand, and seemed to be in the enjoyment of his usual good health. While the heavy fall of snow prevented him from engaging very extensively in trapping, he seemed to have plenty of work to do and was in good spirits when his callers arrived.

Mr. Braithwaite went to the woods early last November with the intention of remaining for the winter. He had promised to call at a certain spot during the month of January and get some mail matter which had been left there for him by a member of a lumber crew. His failure to do so caused his relatives and friends some anxiety, as they feared that something had gone wrong with him. This anxiety increased as time went on and at the request of relatives Mr. Hunter, who is a skilled woodsman and thoroughly familiar with the country, consented to organize a relief party.

Mr. Braithwaite is one of the oldest and most active woodsmen in the Dominion. He entered upon his eightieth birthday in January last, and it is now close to seventy years since he made his first trip to the woods. He has the distinction of being the first white man in the province to guide a non-resident sportsman into the forests in search of big game.

Two years ago while out alone in the Miramichi woods, Mr. Braithwaite had a severe attack of pneumonia and had a narrow speak of it. Fortunately he had a good supply of wood cut ahead and was able to keep a fire going in the stove. He had some deer meat in the camp and broth made from this was his only nourishment. When his health had recovered sufficiently he set out for home on snowshoes and made the trip in three days, camping out at night on the snow. He was badly used up when he reached home, but after a few weeks rest he was able to hit the trail again. It was the memory of this thrilling experience that made his relatives very uneasy on the present occasion.

B. C. Provincial Lumber Sales

Fabulous lumber prices are being reaped by the B. C. Government for timber lands. Probably the record figure was that of land sold at Ramsay Arm. Stumpage for cedar was \$5.30 per M. and \$4.15 for fir. 225 acres were sold at these prices, netting \$36,000. The enormous returns from these tracts can readily be estimated by the weekly sales, which amounts to about \$3,000,000. Some idea of the growth in the lumber industry of the province may be gained by looking at the advance of timber revenue from \$500,000 to \$2,000,000 in the last two years.

Many Openings for Small Sawmills

Writing to the press on the fact that there is still some good timber growing in Ontario farms and that the field for the small sawmill is by no means exhausted, a correspondent points out that there is considerable merchantable timber left in various parts of Ontario. He refers particularly to Durham County and speaks of the sawmill which was recently built at Orono by C. J. Thornton, ex-M.P. A good old-fashioned logging bee was held when the framework of the mill was put in place, and no sooner had the structure been completed than the logs began to come in. The yard is now filled to overflowing with logs of all kinds, while the sides of the two streets adjacent are similarly covered, the scene reminding the old residents of the time when two, water-power sawmills were operated on the creek running through the village.

After referring to Mr. Thornton's enterprise in erecting this mill, the correspondent pertinently observes:

The point of general interest in this is that there must be many sections, even in older Ontario, where mills such as that about to start operations in Orono could be set up with advantage both to the owner and the neighborhood. Although the original forests may have wholly disappeared, and while wood lots may be few and far between, there are still odd pines, elms and other trees which can be turned into useful lumber and that, if not so utilized, will be left until struck by lightning, or they die, and to be then used for the making of inferior fuel. It is probable that not over a tenth of the logs now collected in the Thornton yard would have been cut into lumber had it not been for Mr. Thornton's enterprise. As it is, the material cut will prove exceedingly valuable in the new buildings and alterations to be put under way in the coming season. Moreover, where there is a small mill in a neighborhood not only will timber that has matured be turned to useful account, but that still growing is more likely to be taken care of. The extension of the Hydro and the development of gasoline engines solve the power problems for these small mills. In the particular case just noted, the power is to be supplied by Hydro, and all the slabs left will form a notable addition to the fuel supply of the village in which the mill is situated.

"About Bearings"

To a man who rebabbits the bearings of machinery used in the lumber and wood-working industries, a booklet entitled "About Bearings," published by the British Smelting & Refining Company, Limited, Montreal, will be found of practical help. This concern, which has but recently become established in Canada, is now making in its Montreal plant the well-known "Stanley Process" Babbitt Metal Alloys. We understand that babbitts alloyed under the "Stanley Process" are sold in practically every country in the civilized world.

The booklet mentioned above was issued in a special edition for the lumber trade, and was distributed at the recent Lumbermen's convention held in Quebec. Firms connected with the lumber trade seeking further knowledge of babbitt metals, from a practical, as well as a technical standpoint, can secure a copy of this booklet upon application to the British Smelting & Refining Company, Limited, Montreal.

Mountain Manufacturers Deny Export Rumors

At a largely-attended meeting of the Mountain Lumber Manufacturers, held recently at Cranbrook, B.C., it was indignantly denied that they were exporting from 70 per cent. to 80 per cent. of their product to the United States and giving consumers across the border the preference over those in Canada, when, as a matter of fact they exported only about 20 per cent. of their output. It was decided to invite the Western Canada Lumber Dealers Association to a conference in the near future for the purpose of having the members of the latter organization make known their requirements for the present year. It has been suggested that the conference be held at Calgary and that the prairie dealers assist in showing how little prices have advanced in comparison with those of other products. A resolution was passed in which it was pointed out that if it is true that Canada suffers from a shortage of lumber, the manufacturers desire to know why and where so that the remedy may be applied.

Simmons Limited Open New Building

Between three and four hundred of the Simmons, Limited, employees gathered for the official opening of the new building on St. Ambrose street, Montreal.

The affair proved a very pleasant one and reflected the spirit of goodwill among the employees at the Montreal factory. Cards and dancing were indulged in, the prizes for the former being distributed by Mr. J. H. Sherrard, president of the company, and a buffet supper was served about midnight, after which dancing was continued until the early hours.

The committee in charge were Messrs. J. W. Abbott, A. C. Guth-

rie, W. Dubuc, L. F. Flanagan, G. E. Buckley, A. Healey, J. R. Le-compte, E. Leger, J. B. Shanahan, C. Lightfoot, T. Kearney and Roland Gomery, chairman.

New Company Takes Over Meigs Interests

A federal charter has been granted to the Canadian Pulpwood Corporation Ltd., with headquarters in Montreal and a capital stock of \$1,000,000. The new organization will take over as a going concern the business heretofore carried on in Canada by the Meigs Pulpwood Co., Inc., whose headquarters are at Wilmington, Delaware, consisting of the real estate, timber limits, sawmills, supplies of pulpwood, lumber and milling outfit and equipment of that company. The Canadian Pulpwood Corporation has, in addition, wide powers conferred upon it for the manufacture of mechanical pulp, paper, cardboard, etc. Among the incorporators are John Kerry and A. S. Bruno of Montreal.

Death of Peterboro Manufacturer

Adam Hall, a well-known manufacturer of Peterboro passed away recently, aged 74 years. He was the founder of Adam Hall, Limited, manufacturers of metal products, such as stoves, etc. He was a member of the Masonic Order, and is survived by his wife and two sons. Mr. Hall was well known in the lumber industry in connection with cooking equipment for logging camps in which he had built up a large business.

Handicaps of B. C. Shingle Manufacturers

Shingle men at the Coast report that they are considerably handicapped in the matter of securing sufficient cars to make shipments across the border owing to the embargo that was some time ago put into effect by the C. P. R. Prairie buyers have been holding off for a considerable period, hoping for lower prices, but the mill men declare that these will not come for a considerable time yet. About sixty of the mills are operating at present and logs are decidedly scarce, several of the plants having to lay off the night shifts. The prices of logs are as follows: Fir, \$20.00, \$25.00 and \$30.00; cedar, \$30.00 to \$50.00; hemlock, \$22.00 to \$25.00.

High Finance in Lumber and Furs

A few days ago William Elson, a farmer residing near Wingham, Ont., felled a huge soft elm tree, and in the top of it was the winter home of a family of raccoons with three lusty youngsters. Mr. Elson cut the tree into three logs and had them sawed into lumber. They yielded 2,804 feet, for which he received \$98.14 at \$33 per thousand. Then the farmer sold the skins of the coons for \$70, making the total amount he realized from the tree and its occupants \$168.14. Mr. Elson feels he has established a record for high finance in furs and lumber.

Record Prices for Timber Rights

Prices unheard of in the history of lumbering are being paid to the British Columbia Government for fir and cedar timber. A sale which probably holds the record for all time was made recently when timber rights on 225 acres of land at Ramsay Arm, situated on Tidewater, at a point 120 miles north of Vancouver were sold for \$36,000. In this case the figuring was done on a stumpage basis of \$5.30 per thousand feet for cedar and \$4.10 for fir. The net return to the government will be \$160 per acre. Added to the high prices the mills are getting the benefit of approximately fifteen per cent. exchange on shipments to the United States, where nearly half the British Columbia cut has lately found a market. The volume of business in timber can be guessed from the fact that the Government sales of standing timber are now approximately three-quater million dollars weekly. The revenue accruing to the province from timber during the current year will be \$2,000,000 instead of \$500,000 two years ago.

Another Pulp Plant Changes Hands

International Paper Company interests have taken over the pulp and paper plant of the Aroostook Pulp & Paper Company at Keegan, on the St. John river, a short distance above the Grand Falls, from the company headed by A. R. Gould, of Presque Isle, Me., former president of the St. John Valley Railway.

The transfer, which has just been made to the American Realty Company, a subsidiary of the International Paper Company, includes in addition to the pulp and paper mill, the holding grounds and shore rights of the company along the St. John river on which the mill is located at Keegan, just west of the sorting booms at VanBuren, where there are large lumber mills also on the American side of the river.

It is anticipated that large additions will be made to the present plant. It is reported that these will include a mill for the manufacture of Kraft paper.

Death of Mr. E. Harper Wade

The late E. H. Wade, Quebec, P.Q.

Canada has suffered another severe loss in the death of Mr. E. Harper Wade, of Quebec city, who passed away recently in his 74th year, after a long life of usefulness, most of which was spent in Quebec, and throughout the whole of which he enjoyed and retained to the end the respect of all with whom he came into contact. A native of Liverpool, Mr. Harper was the son and grandson of men who had been prominent in the cotton brokerage business of that city. He received his early commercial training in that city in the offices of Sharples, Jones and Company, wholesale importers of Quebec timber in connection with the old Sharples firm of Quebec. He lost his father at sea on his return from Australia in the Royal Charter. Three years after the completion of his apprenticeship he was transferred to the Quebec office of C. and J. Sharples, which later became John Sharples, Sons and Company, the Liverpool house being then known as Henry Sharples, Sons and Company. All the senior members of the firm had passed away before Mr. Wade left it in 1877 to connect himself with the firm of Roberts, Smith and Company, of Quebec. Upon the retirement of Mr. Roberts from the firm, Mr. Wade was taken in as a partner, and continued the business for some time after Mr. Smith's death, under the old name. He married a daughter of the late John Simons of Quebec. Mr. Wade was a well read and well informed man, and had contributed letters to the press over a long period of years, on almost every conceivable subject of public importance. He was a devout adherent of the Diocesan Synod. His death removed about the last link between the present and the old time timber merchants of the good old timber days of the Quebec trade. Mr. Wade, who had been in failing health for many months, had during the past few years been the author of a number of thoughtful and instructive articles which appeared in the columns of the "Canada Lumberman." There was no better authority on the export timber trade than Mr. Wade who enjoyed an unusually large measure of esteem and confidence in the industry.

Western Canada Trade Jottings

That Vancouver is actively in the timber business was reflected in the announcement recently that the Brunette sawmill of New Westminster, one of the oldest plants on the coast, has been sold for \$1,750,000 cash. The former owners are Toronto and Ottawa capitalists, including the Eddy interests. It is said the purchasers are Vancouver men, including J. A. Smith, who recently sold the timber limit at Port Moody, close beside the original terminus of the C. P. R., for half a million cash to the Dollar Steamship Co. Included in the transaction are several extensive timber limits on the mainland and Vancouver Island.

Masset Timber Co., 744 Hastings St. W., Vancouver, have under consideration the construction of a pulp and paper mill in this vicinity to cost \$1,000,000; The carrying out of the project is contingent upon the amount of water power available for development in the Massett River.

Various commercial agencies, who have been closely studying the situation, state that there is a feeling in the trade among exporters that there will be a big demand from the English markets for both spruce deals and hardwoods, while from the United States there promises to be a lively requisition for spruce and hemlock during the coming summer.

The erection of a new shingle mill and box factory at Langley Prairie is understood to have been decided upon by local capital, the market for shingles having attracted a company of local men who also plan catering to the small fruit grower in the matter of boxes. The shingle mill owned by Mills Bros. is turning out a full daily capacity.

E. F. Duby has purchased 10,000,000 ft. of logs for the Prince Rupert Lumber Co., to be cut at the mill at Prince Rupert, the purchase being made from J. R. Morgan Co. Some of the logs have begun to arrive at Prince Rupert.

Frederick Adolph, of Baynes Lake, B. C., died recently in the hospital at Fernie, aged 82 years. He was born in Waterloo county,

Ont., and followed the contracting business in his younger days. Later he moved to Chesley where he conducted a sawmill for sixteen years. In 1904 he went west and after living in Cranbrook for two years, he moved to Baynes Lake where his sons are owners of the Adolph Lumber Company. The remains were taken to Chesley for interment.

A well attended convention of the managers of the Security Lumber Co. was recently held in Moose Jaw. The gathering lasted for three days and about one hundred persons were present. Addresses were given by leading representative men on various subjects as well as by department heads.

E. H. Bucklin, of Seattle, has purchased the interest of George Small in the Small-Bucklin Lumber Company, New Westminster. Mr. Small retired from active participation in the concern about twelve years ago, but had retained his financial interest in it, which has now passed into the hands of the senior Bucklin.

The B. C. Timber Exporters will load 2,400,000 feet of lumber on the S. S. Tactician of the Harrison Direct Line. Six hundred thousand feet will be loaded at Vancouver and the balance at Genoa Bay. The organization will also load a large quantity of lumber on the Canadian Exporter.

John Hanbury, lumberman, of Vancouver, was recently injured the automobile in which he was driving was run down at Strathcona station by an interurban tram. Mr. Hanbury suffered for some days from the shock. His companion, Major W. D. F. Goodwin, was killed in the accident.

The sawmill of the Summit Lumber Co. at Summit Lake, B. C., was recently destroyed by fire. The loss is partly covered by insurance. The plant at the time was operated by a receiver and the fire is believed to have originated from one of the fans. The lumber piles were not touched.

The Hayward Lumber Co. of Edmonton, Alta., are contemplating the erection of a planing mill.

The Whalen Pulp and Paper Company is reported to have worked into a very strong operating position. The equipping of its mills has been satisfactorily completed and machinery is now thoroughly tuned up. Present operations are at maximum capacity, and in the month of February the high record output of 5,000 tons of pulp was achieved. The company's cut of timber this year, it is estimated, will reach 50,000,000 feet, and income from the lumber and shingle mills will add considerably to earnings from the pulp.

Pulpwood Shows Big Advance in Prices

The Jost Co., Limited, of Montreal, who specialize in pulpwood of all kinds for United States and Canadian mills, report that the supply of pulpwood is much less this year than last year, according to reliable information that they have received. While some people place the amount at 50% less, the Jost Company are of the opinion that the decrease in available quantities is somewhere between 25% and 50%.

The price of peeled pulpwood has advanced steadily since September, 1919, and is on an average \$6 or \$7 per cord higher. The present price of 4 ft. peeled pulpwood varies from \$17 to \$18, on Grand Trunk and Quebec Central points to \$13 and \$14 per cord in Eastern Quebec and New Brunswick, where the freight rate is higher. These are prices paid to the farmer.

The requisitions for peeled spruce and balsam are very active, and the Jost Company say they have no difficulty in placing their wood at attractive prices, and are unable to supply the demand.

A considerable quantity of rough wood was got out during the past winter, and, although the demand is not so great for this, still the price paid is \$15 more than for the same class of wood last year.

Speaking of the future, the Jost Company say that the indications are that for 1920-1921 the production of peeled pulpwood is going to be large, as the present prices are satisfactory to the farmer and to the contractor. The company have received several offers from reliable contractors to make wood for them on the basis of the present prices, but they are rather diffident about going ahead just yet as they feel that the scarcity of wood this year has considerable to do with the present high values. On the other hand, contractors say that the high price is the only inducement that they will have and that the labor situation and excessive cost of production would not warrant them in accepting less.

The price of pulpwood depends, to a certain extent, on the price of lumber as the one line naturally acts in sympathy with the other.

"Don't you think Mildred has perfectly wonderful teeth?"

Yes. But they're false."

"How do you know that, my dear?"

"Why, she told me she inherited them from her mother."

What "Percy" Saw and Heard at Hamilton

Dear Boss:—

Verbum Sapienti bus—I got your wire to stop selling Lath and Clear and Clear Face Norway Pine, and to take first train for Hamilton to meet the Retailers who were going into Convention.

I don't think you will have to cancel any of these orders taken by me unless you haven't got the stock. You will note all prices are left blank—we are to charge the prices that are prevailing at time of shipment if they are higher than present prices, but, if the prices then at that time are below the present market prices, then we are to charge the prices that are prevailing to-day. That is the only way I would sell and I guess I made it safe enough don't you think? The orders are all taken subject to prior sale, subject to acceptance by head office, subject to the freight rates being the same as they are to-day, and if any advance, customer is to assume all additional freight charges, also any War Tax the Government may see fit to assess, also sold subject to price being equivalent to that which can be procured from United States dealers, in other words, we are to add the American Exchange to the Canadian prices. They fussed a little bit about this, but I said you were not particularly anxious to sell your lumber. I want you to understand that I never solicited one of these orders. The buyers just forced me to put their names down for a car, and to be shipped when we can make shipment. I told the customers, that this was the best way for them to buy, because they would then, at least know, the minimum prices they would have to pay for the stocks.

I would suggest that you get a rubber stamp made, with a list of the items to which all orders are taken subject to, and have my next saleslip booked up, as I find that after putting all that writing on the order, I have but very little space left in which to state the kind of lumber and sizes the man wants shipped. There is only room left after all this writing, for the customer to sign his name, and of course that is a necessary adjunct to have on the order book.

Of course, you know they wouldn't let me in the retailers meeting, as I represented a wholesale firm. I think the best thing for you to do, is to buy out a retail yard some place so then you can be classified as a retailer, wholesaler and manufacturer. Of course, the hitch would be to advertise yourself as a manufacturer, but that can be gotten around by advancing some small mill two hundred thousand dollars, and thus control their output. I understand that is how the other wholesalers are doing it. It also lends a whole lot of prestige to advertise you are in the lumber business three, different ways, just like playing a horse straight, place and show. All three ways, do you get me?

Well, they invited me to their dinner. It was a lollapoolusa. They served a whole flock of Bill Paynes chickens. I think he must have gotten them from Brantford, as they tasted like McCormick's brood.

The "piece de resistance" as they say in Montreal was a duet rendered by Jimmy and Don. Have you ever taken a nail, and drawn it over a sieve. Well, their voices sounded almost as sweet.

I also liked the talk given by the youngest man in the crowd—John Reid—God Bless him. He didn't go back to Greek or Tolbec mythology for his similitudes, of course, but kept his remarks in labyrinthine channels in which we could all follow what he said. You know when anybody has to be called upon to pat babies on the head, thank Mayors, clergymen, bank managers, and lumber manufacturers for favors received, or about to be received, they always seem to have to call upon an Irishman—God save the mark—to do it, not because so many of them came from Ireland by way of Cork and Blarney Castle, but just because they have the gift of "Facile falsehood, and persuasive speech" (I quote from Saxe, make his acquaintance) and when it is necessary to place Myrrh and sweet ointment upon a spot, the Irishman is called upon to do it, as only the Irish can.

But Boss, before I close, I shall have to tell you of the greatest faux pas ever perpetrated by a politition or office holder.

The Chairman introduced His "Washup," the Mayor. It was tacitly understood that he was to give us an address of welcome. Big Bill Devery once coined a phrase that exemplifies what I wish to say about the address. The phrase is as follows: "Appertainin' to and touchin' on. Well, that Mayor appertained to and touched on every conceivable subject. Like the ordinary politition, he opened up his whole box of tricks for the delectation of his audience. The way he skipped from one subject to another, was marvelous; he was as dexterous as a magician with a pack of cards: even the agility of Eliza jumping from one cake of ice to another, trying to cross the river with her "cheeld" in her arms, was futile in comparison with his flights of fancy and oratory. He surely said: "Parvo in multum" and when he finished, we were still without the welcome and the keys to the City, and had no assurance that the Chief of Police was to look askance, in the event any of us were hailed before him in

the morning. Ordinarily, the lumbermen are looked upon as a bunch of good fellows, but evidently from His Worship's address, somebody must have been charging him too much for wooden tooth-picks and he took this opportunity to retaliate on the manufacturers and purveyors of lumber in general. However, there is this to remark, everybody was afraid to do anything for which he might be jailed, and a meeting of the W. C. T. U.s, or a convention presided over by "Pussy Foot" Johnson was not more decorous than the last lumber Convention. I'll say his speech had a salutary effect.

The chief "Toreadors" of Toronto, were conspicuous by their absence, but they were well represented by several employees. It is a relief to meet up with a lot of fellows who have something worth while to talk about and who can talk about it in a proper way. "Bull slaying" should be left to the Mexicans and Spaniards; it has no place in a gentleman's business such as only the lumber business is. As a matter of fact, the lumber business is a MAN'S business, and it takes a man to look after it.

Altogether, it was a very enjoyable time, and I was glad to have enjoyed the hospitality of a lot of good fellows. It was a nice thing to be able to go up and receive a real genuine handshake and bon camaradie, and I hope that I will live long enough to go to the next fifty, or more.

Yours truly,

Dublin, Ont.

"Percy McIntyre."

A FAIRY STORY ABOUT LUMBER PRICES

(With Apologies to George Ade)

Once upon a time—in fact in March 1920, there were Certain Interests in the lumber industry, who, though they controlled only about 2 per cent. of the lumber production of the country, thought that in size and importance they were bigger than the industry in which they lived and moved and had their being. They had grown so large as manufacturers, so huge as wholesalers, and so enormous as retailers that they finally over-stepped themselves and their wholesale and retail departments sold more lumber at low prices than their manufacturing department could produce or ship. Then behold! these Certain Interests gathered themselves together with much trepidation and misgivings in a great pow-wow and there was much palaver.

Suddenly one wily and clever chap in their midst became suffused with a "Big Idea." Quoth he, "These retail birds, our competitors, are a foolish and inconsistent bunch. Let us prepare a great bear story—let us tell the world that lumber prices are falling—let us in all our departments: manufacturing, wholesale and retail, cut our prices, being careful of course, not to take any orders—and then let us call in the newspaper chaps and pose as prophets and philanthropists, and we will in one fell stroke secure the good will of the public and scare these poor retail birds into lowering their prices and boycotting their friends, the other wholesalers and manufacturers. Then when we have hammered the market sufficiently and other manufacturers have weakened and lowered their prices, we will quietly pick up all of the cheap lumber and fill our old orders, and what we have left, we will sell to the retail birds at our own prices."

When he had finished with speaking, there were many "Bravos" and much applause for this clever chap, and as he had spoke, so was it done. Newspapers' front pages rang with the blazoned story of cheaper lumber and of the magnanimous—generous—beneficent Certain Interests which had brought it all about.

And lo!—many retailers fell for the tale and stopped buying, and for a few days, the market softened; but certain wise retailers who had been fooled too often by their Certain Interests, took counsel and asked themselves and argued rightly: How can there be lower prices with car shortage so severe and demand so great? If we delay our buying and all buy at once later, we will pay much more for our lumber and many of us will be short. And they decided that they would not be again fooled by the Certain Interests, but would use common sense in their buying and selling and in all of their transactions—and behold! They started buying steadily and evenly and the good law of supply and demand again held sway. And gradually the car supply improved, and the market stabilized, and the entire industry became sound and prosperous.

But in the quarters of the Certain Interests, there was much gnashing of teeth and sharpening of pencils.

MORAL: The tail can never wag the dog.

Camp Supplies Still Ascend in Price

The cost of camp supplies has, in the majority of lines, been steadily ascending, and prices to-day, in many instances, are double and even triple to what they were just previous of the war. From time to time in the "Canada Lumberman" comparative statements on the leading items have appeared, and in this issue another table is presented, indicating the advances during the past eighteen months. These increases apply particularly to flour, butter, eggs, sugar, coffee, potatoes, rice, corn syrup, prunes and other lines. In pork there has been little to complain of, but, on the other hand, hay and oats have reached the top rung and some operators declare that oats laid down in the camp now cost all the way from \$1.30-\$1.60 a bushel, and are practically unobtainable in a few districts. Hay is also another item which has shot skyward and, in most camps, the quotation for this delivered commodity runs from \$45 to \$60 per ton.

The following table shows that current prices which prevailed in Toronto on leading lines in June, 1914, June, 1918, and March, 1920, will be found worthy of study:

	June, 1914	June, 1918	March, 1920
Barrelled Pork Reg. Mess	\$26.00	\$54.50	\$48.00
Short Cut Back	28.50	58.50	56.00
Clear Fat Back 85/100	24.00	57.00	50.00
70/85	25.00	57.50	53.00

"A Hand Book of Saw Fitting"

The Wm. B. Mershon & Co., Saginaw, Mich., have recently issued a neat and attractive booklet of thirty-six pages, entitled "A Hand Book of Saw Fitting." The publication is, without doubt, the most complete and instructive of its kind and contains not only splendid illustrations but many valuable pointers on the care and treatment of band saw blades; saw-makers tools; forms of teeth filing; hanging in the saw in the mill; brazing saw blades; revised table of strains suited to different widths and gauges of band saw blades; model teeth for band saws; shapes of band saw teeth; and many other topics.

The booklet will be found invaluable to any one employed in the saw-filing room or saw-fitting department of any wood-working industry, and a copy will gladly be sent by dropping a card to Wm. B. Mershon & Co., Saginaw, Mich. The company announce that the purpose of the publication is to have it in the hands of different filers in sawmills, planing mills, etc., throughout the country.

An Increased Hardwood Production

M. Mitchell, of A. K. Hansen & Co., lumber and pulpwood merchants, Quebec, in writing the "Canada Lumberman," says the past winter has been generally favorable for logging operations, and that there will be an increased production of hardwoods of, probably, 30% in that province and in Ontario. Mr. Mitchell does not look for the present high prices for export hardwood to Great Britain to be

long maintained as they are stimulating a much more increased manufacture of home-grown timber across the sea. It is not probable there will be very much, if any reduction, in ocean rates, although it is expected that shipping space will be plentiful.

Eastern Company Will Erect Mill

Announcement of a new industry, which will be of much importance on the upper St. John river, was made recently by Mayor J. E. Michaud, M.L.A. for Madawaska, who said that the Notre Dame Lumber Company, Limited, of which J. M. Stevens, of Edmundston, is secretary, and in which Hon. W. W. Thomas is interested, are to build a sawmill for the manufacture of lumber, on the old Crocket mill site at Kennedy Island, near Clair and St. Francis.

It is some twelve or fourteen years since there was a mill there, and the new plant will take care of a large portion of the lumber cut on the Canadian side of the upper St. John river, in both New Brunswick and Quebec. The company will ask the legislature for the privilege of placing piers and booms in the St. John river in a bill which will soon be introduced.

Tribute to Canadian Wooden Ships

Mr. Lambert, of Montreal, who was naval architect and assistant director for the Imperial Munitions Board, has just returned from Europe. While in Great Britain he made inquiries as to the wooden vessels built in Canada. He found that out of 46 ships, three had been burned, fifteen or eighteen had gone ashore, but were all got off again, and, with the exception of the three which were destroyed by fire, all these ships were in commission and doing good work. This he considered a very pleasing tribute to the Canadian wooden shipbuilders, particularly in view of the poor results attained with the American programme, many of which ships are now lying as hulks.

Reforestation in York County

It is expected that work will begin in the near future in the reforestation of waste districts of York County. Recently the Reforestation Committee of York Township met and discussed the project, which, it is hoped, will yield a revenue to the township and prove an invaluable adjunct to the lumber trade. Another meeting will be held in the near future when it is expected that an address will be delivered by E. J. Zavitz, provincial forester, who will give the committee the benefit of his advice on the best trees to plant.

Many New Sawmills Arise in West

Because of the sure market and high prices for lumber, the industry in the province of British Columbia is booming as never before. Sawmills are springing into existence in great numbers all over the province. Mr. John A. Thompson, of Vancouver, says that the demand for sawmill machinery is almost insatiable. The demand is chiefly for small mills with a capacity of 10,000 to 50,000 feet per day. Vancouver Island has received a very large number of the mills and the Cowichan Lake district has been especially active. The activity has also extended to the interior, and small sawmills are being shipped into the Okanagan and the Kootenays in a steady stream.

The market is almost bare of logs and to-day the small mill has a most favorable opportunity because the large mills on the waterfront are having difficulty in finding sufficient logs on the open market at satisfactory prices. Mr. Thompson thinks that present prices in the lumber market are inflated and that there is due to be a reaction. But he points out the reduced supply sources in the world market, and that Russia, which used to supply about one-half of the world's supply, is now out of the market altogether. "I have been in the lumber industry in the province for the past 22 years and I consider the present opportunity is the first real solid permanent outlook that I have seen. In the old days the province depended upon the northwest market almost entirely, but to-day the world is our market. The premium on exchange has also been a great stimulus, and although that condition is not permanent it has made possible the rapid growth of manufacturing industries which will, I think, be permanent, regardless of whether the exchange conditions return to normal."

Lumber Shipments from Bathurst

The lumber shipments from the port of Bathurst, N. B., during the past season were rather small, as H. M. Sweeney, collector of customs, states that it was difficult to bring ships in on account of the scarcity of bottoms. The export for 1919 were 13,317,509 feet of lumber and nine vessels called in the port with a total tonnage of 10,085. The exports of forest products through the port of last year were less than in 1916 but greater than in 1917 or 1918.

FOR SALE

Hoop, Stave and Lumber Mill, including logs, yard, to wind up an Estate. Considerable timber within hauling distance and 7 branches of the G. T. R. leading to Mill Sid-ing for shipping logs by rail. Enquire of—

G. B. MERRITT, Executor,

Box 644, Stratford, Ont. 5-8

WANTED—A MAN WITH PORTABLE SAWMILL

to cut 2,000 logs. Apply Box 198, Canada Lumberman, Toronto, Ont. 7

For Sale—Saw and Planing Mill

25 H.P. Engine, 50 H.P. Return Tubular Boiler, Good Saw Rig, etc., 24" Planer and Matcher, 18 H. P. Gasoline Engine, 2 Rip Saws, Tenon Machine, 1 Side Sticker, etc. Would sell Sawmill separate. Box 165, Canada Lumberman, Toronto. 7-9

Business Opportunity

Factory, now making Sash, Doors, House Finish and Hardwood Flooring, located in Eastern Townships 100 miles from Montreal. Water power 110 H.P. Appraisal by reputable appraisal company made in 1918. Depreciated value \$65,000.00. Replacement value \$90,000.00. Plenty of lumber obtainable. \$35,000.00 for quick sale. Address P. O. Box 98, Coaticook, Que. 7

Saw Mill and Limit For Sale

Located three miles north of Sprucedale, Ontario. Limit consists of about two million feet, about eight hundred thousand hardwood, balance hemlock and pine, about three hundred thousand feet stock at Mill; other timber can be purchased close at hand. Sale must be cash. For particulars apply to A. Demerline, Sprucedale, Ont. 7-8

Saw Mill Plant For Sale

Practically new and modern Saw Mill Plant, capacity about 30 Million feet per annum, located in the Interior of British Columbia on a beautiful inland lake and on the main line of the Grand Trunk Pacific Railway. About 500 Million feet of timber on and adjacent to Lake (about 90% Spruce) and another Billion feet available at reasonable prices. Natural conditions ideal for economical logging, manufacturing, piling and shipping. An advantage of about \$4 per thousand feet in freight rates to the Prairie Provinces over Coast shipments. This property offers unlimited possibilities as a lumber, pulp and paper property. Would consider selling a half interest. Terms reasonable.

A. C. FROST COMPANY,
134 South LaSalle Street,
Chicago, Ill.

Timber Land For Sale

The following list is offered for immediate sale of 103 square miles of Crown Lands, Bonaventure Co., Que., with a very valuable water power. Entire tract, with exception of small farm owned by company, is covered with Spruce, Fir, Cedar, Pine and White Birch, no waste lands, no swamp; timber is especially tall, straight and sound. Very little of property which does not lie within 2 miles of driveable water. Lands are covered with Virgin Forests with the following amount of timber for manufacturing purposes: Spruce, Pine and Fir, 350,000,000 feet. Cedar of very fine quality, 75,000,000. Hardwood, 35,000 cords, and Pulpwood, 600,000 cords. Lands lie within 4 miles of railroad. Further particulars on application. Have other very fine limits also.

WM. COOKE & SON,
Stair Bldg., Toronto.

British Lumber Trade in 1919

The year 1919 did not fulfil its early promise. Events moved rapidly at the commencement, and prompt announcement was made that the control of hardwoods would terminate on the 1st

March. This was followed by the welcome Board of Trade notice on the 5th March that the "Timber Control Order, 1918," together with other orders affecting the trade would be revoked, and cease to have effect from the 31st March. Prior to the latter date the Government, through the timber buyer, bought very largely from stocks abroad which, added to the unshipped purchases previously made, totalled a formidable figure. During the year considerable shipments were removed, but the amount still to come forward is large. Naturally private enterprise in importing, especially in the early months and the getting back to normal conditions is protracted. Government holdings of mahogany and hardwoods were largely disposed of by public auction, and the end of the year saw this branch in a more satisfactory position. Softwoods were not so fortunately placed, as considerable doubt and uncertainty existed as to the quantities in Government hands for shipment, and the precise method of disposal. Other disturbing and hindering elements were the shortage of freight space, and extreme rates. Strikes in most trades were prevalent and in no small degree responsible for quay congestion at most large ports of the country although this was primarily caused by shortage of warehousing accommodation and dearth of trucks at the railway receiving depôts. Almost throughout the year foreign exchanges were erratic, and the depreciation of the pound sterling was a serious deterrent to trade with Canada and the United States of America. As to the future a large demand may be looked for when more stabilized conditions prevail; the labor market in particular being a disturbing element.

Imports during the year may be considered satisfactory, and far in excess of 1918. Deliveries continued steady, resulting in fairly heavy quantities being absorbed. The brisk demand for mahogany and certain hardwoods continued practically throughout the year at high prices; more particularly applicable to the former. Softwoods were in good request, but probably the real demand is still to be felt. Stocks all round are not excessive, although some varieties appear sufficient for the time being. Prices were on a very high basis with an advancing tendency, except for some varieties which showed weakness in the early part of the year; these quickly recovered and all the lost ground was more than made up, but val-

ues all round are extreme and great caution necessary.

In their annual report Farn, Worth & Jardine of Liverpool, Eng., say:

New Brunswick and Nova Scotia, etc., timber.—St. John and other ports, pine.—No transactions. Birch.—Logs from St. John, N. B., and Halifax, N. S., etc.—The import only totalled 20,000 cubic feet, mostly to Liverpool. Most of this went into consumption, without quite satisfying the demand. Stocks light. Planks, etc.—The import was large, but deliveries accounted for a considerable proportion. Stocks are not too heavy. Squares.—Fair enquiry.

New Brunswick and Nova Scotia spruce and pine deals.—Spruce deals.—The import to the Mersey (including the Manchester Ship Canal) showed a total of 52,430 standards, compared with last year's low record of 10,920 standards. Deliveries were about evenly distributed from Liverpool and Manchester, making a total of about 34,480 standards. Stocks have accumulated and now total about 24,230 standards. The removal of the "Timber Control Order, 1918," at the end of March was neutralized to a large extent by the Government's heavy f.o.b. purchases prior to its expiration. These purchases, added to the overlying stocks, amounted to a large total, consequently the importing side was controlled by the Government. Private enterprise was extremely difficult during the early months as Government freight rates were lower than could be obtained in the open market, and added to this, the uncertain quantity of Government stocks and method of disposal, but during the latter months more confidence was shown and moderate quantities came forward. Congestion of the ports was a serious matter, especially as "guarantee discharge" was frequently insisted on by shipowners, and the difficulty of berthing and discharging promptly was doubtless the cause of diverting a number of cargoes to out-ports, in many instances, to unusual ports. The demand was steady throughout, but not so large as generally anticipated, due in no small measure to unrest in the labor world and the high cost of all building material, holding up construction. The latter cannot be indefinitely postponed and when arrangements are complete a period of activity should ensue. Tonnage will probably be scarce for some time with high rates, but whether the past year's level will be maintained remains to be seen. Prices ruled high and fairly steady throughout, but the heavy depreciation in the rate of exchange with Canada was a very serious factor to shippers. The enhanced cost of production,

necessitates higher prices for the coming season. Pine deals, etc.—The small import included a cargo of about 760 standards from Miramichi. Deliveries were quite satisfactory, leaving only a small stock. Enquiry good and full rates were obtained.

Canada is on the World's Map

An American paper, under the heading "Our big northern neighbor," writes as follows about Canada:

Talk about bigness! It will surprise many folks to learn that Canada is larger than the United States by 250,000 square miles; contains one-third of the area of the British Empire; is as large as 30 United Kingdoms, 18 Germanys, 33 Italys; is larger than Australasia and twice the size of British India; has a boundary line of 3,000 miles between it and the United States; its seacoast equals half the earth's circumference; is 3,500 miles wide and 1,400 miles from north to south. Do you wonder that the Canadians feel a bit "chesty" about their country?

Review of Current Trade Conditions

Ontario and the East

As Spring approaches, the pertinent question is,—where to obtain stocks and what prices will they command. Some good-sized deals have been put through during the past few days and the figures have been much in advance of anything ever known in the history of lumber sales. Many predictions have been made that the peak in prices has been reached, and matters have got to such a stage now that no one cares to make predictions and nothing startles the industry. So many standards have been cast aside and so many precedents set at nought, there is little that can be carried out in the way of enhanced quotations that will in any way stagger or alarm.

Before the European outbreak occurred financiers in New York and London had for many months been proving conclusively, so far as figures were concerned, that a world strife at arms was an economic impossibility, that ruin and desolation in a financial sense would follow within a very few months, and hostilities would have to cease from sheer monetary exhaustion. At the most, war could not continue more than six months. As a matter of fact the combat raged on a scale more gigantic than anyone had ever predicted for nearly five years and still the world was not bankrupt nor is it to-day.

It is largely the same, making predictions with respect to lumber, its demands, prices, etc. Figures that a year ago would have been thought amazing or preposterous are to-day received with equanimity. It takes an earthquake nowadays to jolt the world.

As far as driving conditions are concerned, these are favorable and it looks as if many mills will be in a position to begin operations in about a month's time. The cut of logs has been a large one but it will be many weeks before the dry stock can begin to satisfy demand.

Prices are going up all the time in the matter of supplies, such as sisal rope, lumbermen's axes and tools, cant hooks, peavies, pike poles, boom chains, spikes and all other accessories; in fact everything in the hardware line is aviating all the while. Just what wages will have to be paid at the mills, cannot be foretold at present. Labor is still restless and one thing is certain that the pay will not be less than last year, while in some centres it may be considerably higher. In the matter of purchasing provisions for camps, one lumberman stated recently,—“I have ceased to be excited recently by advances, and naturally expect a raise every time that I make a purchase of supplies. I have simply hardened myself to it and that is about all one can do. Everything betokens far costlier operations next season.”

Shed stocks in British Columbia are now beginning to come through, not in straight carload lots, of course, but in mixed cars. Flooring, ceiling, boards and shiplap are being ordered quite freely and Eastern representatives of Western firms are again on the road. Shingles are rather quiet at the present time and the demand is not very brisk, as local stocks are pretty well taken care of and the price is fluctuating. There have been no advances on quotations in Western stocks during the past few weeks but on the other hand there is no evidence that the predicted drop is going to come about.

Everything is moving along satisfactorily in the building line, and as Spring approaches, the permits taken out in the different towns and cities indicate that, while some complaints are heard with respect to the price of lumber, there is little or no grievance raised regarding the demands of labor, which are far more excessive in proportion.

Laths are still very scarce and high in price. They command practically whatever figure one may ask for them. It is expected, however, that there will be a drop in the near future as many plants have been cutting lath during the past few months; in fact, production in some districts will run away up into many millions.

The car situation is improving at some points, but on the whole is none too reassuring. Frequent embargoes add to the difficulties of shipment and the United States roads, since they have been handed back to their owners, have not yet got on a proper operating basis. There are thousands of Canadian cars across the border awaiting return to the Dominion, and it is impossible to obtain sufficient American cars in which to make shipments. However, it is felt that the worst is now over, and from this out a decided improvement is looked for.

In hardwoods, prices continue to advance. The abnormal de-

mands for birch causes values to ascend more than ever. There is decided activity among the consumers of birch, in the production of furniture, gramophones, etc., owing to the exceptionally high price of oak. Hardwood flooring factories are unable to obtain sufficient stocks of maple, birch and oak to attend to the unprecedented local calls, let alone the matter of export and thus the scarcity of stocks in many lines becomes daily more pronounced.

Great Britain

There is a feeling of optimism regarding the trade, and during the past few weeks business in the timber line has been active. In all parts of the country sawmills have been very fully employed and have orders ahead for several weeks. The “Timber Trades Journal” says that enquiries are more general and scantlings are selling well. £40 for 2 x 4 unassorted red is now generally paid, but 2 x 4 white wood is not so much sought after. This greater demand for small stuff is easily explained by the much better progress in house-building. Of course, in proportion to the needs practically nothing is being done, but there is visible evidence of improvement, and new houses are to be seen in various stages of progress in very many towns, and particularly in some of the suburbs round London. Transport facilities are slightly better, and more wagons are now available for timber. There is still, however, much room for improvement in this direction. The hardwood market is brisk, and prices are rising. Oak in particular is very valuable, and some high prices are being paid for good quality.

Importers, as a rule, have kept their purchases very quiet this season, and have not boasted much about their dealings on f.o.b. terms. Most firms who have bought have done so with considerable trepidation, feeling that they were taking a plunge into the unknown, and they immediately began to dispose of their purchases in order to cover themselves. This was a safe policy, but many now wish that they had been a little more optimistic. Most of the inland merchants have purchased pretty heavily, and they have done well, as they have secured wood from the large importing firms at quite a moderate profit. In the manufacturing districts the consumption is now very keen, and as the timber arrives from the docks it is immediately sent away to the users. Orders are not large, but they are very numerous, and retail prices are excellent. Many of the larger merchants inland who are not actually importers are eagerly asking for further wood; they do not seem at all nervous about the prices, and state that whatever these are they must be paid.

In the London market the movement of stocks continues fair. There is a tendency to restriction in demand, which may have been caused by the high basis of rates and the conditions that rule. The apex of these advanced values may have been reached. There appears very little reason to expect that there will be any material decline owing to the high cost of production and heavy transport charge and the world-wide competition for supplies. In mahogany and hardwoods there is ostensibly no sign of relief from these conditions.

Advices from Liverpool say that values of all kinds of lumber are still rising and that there appears to be no limit in view. It cannot be said that a fluctuating market helps trade. On the contrary it would appear as though values will be ruled by the people who have made money during the war and have more to spend upon furniture production than less fortunate individuals.

United States

In the hardwood arena business has quieted down somewhat and enquiries are not as numerous as they were, but the trade is disposed to accept the situation with equanimity and is not worrying about the future. Stocks of dry, saleable hardwood are low and producers believe that future buying will be heavy, and are just now bending all their energies to having a stock on hand. The demand exists, however, and trade will resume its normal activity, it is expected, in the near future.

There have been some charges that manufacturers have taken advantage of an unusual situation to get exceptionally high prices for their lumber, but it is pointed out by those who are in a position to know, that the anxiety of buyers has been more influential in boosting quotations to their present levels than anything else.

Something of the actual stock situation can be gathered from

statistics recently issued by the manufacturers of northern Michigan and Wisconsin. Winter is the season when hardwood lumber is cut in largest quantity, and the natural season for stocks to accumulate. But these statistics, for the eight northern hardwoods, each divided into two items, of No. 3, and No. 2 and Better, show increases in supplies on hand between the first of January and the first of February, on only six items and decreases on ten. The sum of the decreases was more than sixteen million feet, while the sum of the increases was less than three million feet, leaving a net decrease of more than thirteen million feet.

The disturbing factor at the present time is the constant demand of labor for higher wages and shorter hours, and it is felt that prices cannot fall while such a condition exists. Labor troubles are looming up in a number of sections in the North, and, while mill employees have asked for a shorter working day, the manufacturers are averse to the proposition. The reason of this is the sawing season extends over only a few months, and sufficient quantities must be gotten out within that limited period to satisfy the demand. To shorten the time of operation from ten hours to nine or eight, would result in many mills not being able to produce enough lumber to make the season a profitable one and to get enough stock to meet the building trades requirements.

In the South the mills are away behind in orders, and weather

conditions have been none too favorable, while transportation troubles have been experienced on all sides.

It is interesting to note that lath prices still hold firm and a recent despatch from Minneapolis says:

Lath seems to be getting in a little bit more plentiful supply. The output of the many small mills which started up during the winter doesn't seem, however, to have had any effect upon prices. Prices vary all the way from \$12.35 to \$20 at the mill. Little or none is available, however, at the low figure. The output of some small mills is being taken by wholesalers on the basis of from \$14 to \$18 at the mill.

In speaking of the price stabilization movement, the "Mississippi Valley Lumberman" in a recent article ably sums up the situation as follows: Notwithstanding considerable criticism of the way in which recent lumber price stabilization plans were interpreted by the daily press, the fact that the effort is being made affords much satisfaction to the retail trade and to the public, and we believe that the wholesale and manufacturing interests are less affected by it than it was first thought they would be. So long as there is a demand for lumber in excess of the supply, prices at which it is sold will vary with the necessities of buyers. Where they are unable to buy in sufficient quantity the price level of the lower lists put out they will pay higher prices for material that can be delivered.

Market Correspondence

**SPECIAL REPORTS
ON CONDITIONS AT
HOME AND ABROAD**

Ottawa Interests Tied Up By Serious Car Shortage

The most serious foreign car shortage that has existed for many years, and which tied up hundreds of orders and prevented the shipment of hundreds of thousands of feet of lumber to the United States, together with the continuance of firm prices and a good demand, were the chief matters of interest in the Ottawa lumber market during the closing period of March.

In addition considerable interest was manifested in the recent conference between about twenty western members of Parliament and Sir George Foster, having for its aim the lowering of the price of lumber in the west. Though a variety of suggestions were put forward none of them were considered feasible, and the government took no action. The placing of an embargo on lumber shipments to the United States was termed by some of the western members as being "one of the last things" they wanted to do.

With few if any foreign cars available for shipping, the market reverted into an odd position, orders continued to come in, and inquiries piled up, still the lumberman was puzzled as to what to do with them, as in the majority of cases many orders already accepted awaited shipment, and up to March 21st no relief from the car situation was in sight or was expected for another week or so.

Domestic and local business showed increased activity, there being a few good orders placed for building stocks for spring delivery. These evidently indicated that there were some at least who had not been scared out of their building plans by the "high price of lumber" chatter.

With stocks the shortest they have been for several years, and in some grades entirely wiped out, it was thought by some well informed dealers that the "peak" of high prices had been reached. "I do not look for prices to go higher. There is a limit to all things, and with certain stocks out of the market raising prices is not going to bring them back. They simply cannot be had," stated Mr. P. C. Walker of the Shepard and Morse Lumber Co.

The most serious effect from the foreign car shortage asserted itself from March 17th up to the 24th, during which period some railways refused cars for lumber shipments, stating that they had orders to turn them over to the paper makers for the shipment of newsprint. Though no official statement was issued, it was heard in lumbering circles that the order diverting the cars from lumber to paper shipments emanated from Washington and came to the Canadian Government.

The present tie-up was brought to a head locally when the growing shortage of foreign cars became acute, after an order had been issued by the New York Central Railway, dated March 15th, which prohibited the loading of south bound cars with certain commodities. Lumber, pulpwood, wood pulp, perishable merchandise, food for human and animal consumption, and paper constituted most of the eligible merchandise to be shipped. The order applied to all Canadian terminals of the New York Central. John R. Booth, Shepard and Morse, W. C. Edwards, D. G. Gilmour & Co. and several

other firms in the Ottawa and the Ottawa Valley were badly handicapped.

To relieve the situation empty cars were offered some shippers. These were taken by some firms and rejected by others on the ground that the season of the year was against open shipments due to the expected sleet and rain.

Conditions with wood working plants and factories while not outwardly showing any general change, picked up on the matter of inside business. The plant of James Davidsons Sons reported that it had enough orders in doors alone to keep it busy until September.

While woodworking plants looked for an increase in wages from labor to become effective May 1st, it was generally expected that business would continue good and conditions satisfactory.

An additional increase of ten per cent. over previous prices took place during the latter part of the month on doors.

Montreal Reports High Prices and Low Stocks

Business in most lines in Montreal is satisfactory. The conditions are practically unchanged—very high prices, low stocks, and ready sales of lumber on offer. Interest centres on the question of how much higher—if any higher—prices will go. Some wholesalers declare that they cannot see any logical reason for further boosting, while others are of opinion that we have not yet seen the peak, and that a further rise is warranted by the conditions of the cost of production. If there should be even a moderate demand when the construction season fairly opens, it is predicted that the range of values will again appreciate.

So far as the local situation is concerned, a fair amount of trade is passing. There is every indication of a busy building year, and now that the Housing Act has been amended there is reason to believe that many workmen's dwellings will be constructed. Reports from the provinces are favorable to considerable constructional activity. In places like Quebec, Three Rivers, Shawinigan, and Drummondville, where increasing numbers of industries are being located, there is a very large amount of construction going on and planned. Lumber firms in such centres tell of very brisk business, at good prices.

B. C. stocks are coming through fairly well, and it is reported that some wholesalers are offering slight concessions from the very high quotations lately ruling, but this is regarded as merely temporary.

Only a small quantity of the British Government stock is being moved from the winter ports. The 45 million feet originally bought by the French Government and recently sold to a Canadian export firm is being offered to Canadian wholesalers.

The groundwood market is buoyant, and the highest prices on record are being paid. The result of this condition is that pulp and paper companies who ordinarily manufacture considerable quantities of lumber, are turning their logs into mechanical pulp, and reducing their sawing of lumber. Sulphite pulp is also very firm.

All "Reliance" Chains are provided with a wide-wearing shoe on one side of the link.

Note also the double-keyed pin head to prevent the pin from turning.

EDGINGS**Ontario**

Edward Diesburg, lumberman, of Belle River, Ont., has sold out to Paul Sauve.

Fire recently did several thousand dollars damage to the premises of the Columbia Handle and Lumber Company, London.

The Ontario Timber, Tie and Construction Co., of Timmins, have taken out nearly 600,000 ties during the past season and have recently acquired a new timber limit in Denton township.

By supplementary letters patent the capital stock of the Canadian General Lumber Co., Limited, Toronto, has been increased from \$200,000 to \$500,000 by the creation of 3,000 shares of new stock at \$100 each.

The decision of the federal government on the question of re-enacting the excess business profit war tax will not be made known until the Budget is brought down, it was intimated by Sir Henry Drayton in the House.

The Detroit Sulphite Pulp & Paper Co. have established an office on the Mission. W. C. Laubenhayer, local manager, thinks well of the new enterprise and expects to handle large quantities of wood during the coming season.

At a recent meeting of the Guelph Chamber of Commerce, a strong resolution was passed, urging upon the Ontario Government the necessity of conserving timber limits, and requesting that for every tree cut another be planted.

The Fesserton Timber Co. of Toronto, are operating several lath mills in various parts of Northern Ontario. The company have also purchased the hemlock cut of the Weismiller mill at Bala, for the coming season, amounting to 2,000,000 feet.

The Uxbridge Paper Box Co., Limited, Uxbridge, Ont., have been incorporated to manufacture and deal in paper, fibre and wood boxes. H. H. Davis and J. S. Beatty, solicitors of Toronto, Ont., are among the incorporators. Capital \$120,000.

The North American Lumber Co., Limited, Toronto, have been incorporated to carry on a business as manufacturers of timber, lumber and other wood products. Among the incorporators are J. C. Leith and A. C. Crystdale, both of Toronto. Capital stock \$100,000.

R. E. Lalonde, Limited, Cochrane, Ont., have been granted incorporation for the purpose of carrying on a general lumber business in all its branches. J. M. Ferguson and T. M. Mungovan, both of Toronto, Ont., are two of the incorporators. Capital stock \$40,000.

Thieves recently broke into the residence of John Grey, lumberman, 113 Robert St., Toronto, and ransacked everything while the family were away attending a funeral. They stole \$100 in cash, two revolvers, jewelry and a quantity of clothing, in value approximately \$1,000.

The Mattagami Pulp & Paper Co. have their third digester installed and are turning out an excellent quality of pulp while further preparations are being made to install a new drying machine which will be in operation about Sept. 1. The machine will not only increase the output materially but will reduce the cost of production at Smooth Rock Falls.

The Pierce Lumber Co. with a capital stock of \$300,000, and headquarters in Timmins, Ont., has been granted a federal charter to manufacture and deal in logs, lumber, timber, wood, etc., as well as to make barrels, boxes and packages of all kinds. Among the incorporators of the company are H. Weinfeld, M. M. Sperber and L. Levine of Montreal.

Up to December 31st, 1919, ninety-nine municipalities have come under the Ontario Housing Act. Of the 1,184 houses erected throughout the Province last year under the Housing Act, all are taken. With the above figures, Toronto built 236 houses and at the end of the year had still eighty on its hands unsold.

E. J. Callaghan Limited, with a capital stock of \$100,000 and headquarters in Fort Frances, Ont., has been incorporated. Wide powers are conferred on the new company, which in addition to buying, selling, importing goods and wares of all kinds, is authorized to carry on the business of lumbermen, shipbuilders, etc. The incorporators are Edward J. Callahan and others of Fort Frances.

Hall Bros. of Toronto, who are conducting an operation in Richmond Township, County of Lennox, have started sawing for the season. During the past winter they took out one million feet of mixed hardwoods and are now sawing about twenty thousand feet a day. The company are also devoting more attention than ever to their wholesale lumber business, specializing in Canadian hardwoods.

The O'Brien Corporation has written the Board of Trade at New Liskeard, stating that they intend to proceed with the erection of a large pulp plant at North Temiskaming and a power plant at Des Quinze, Que. The Board of Trade of New Liskeard intend urging upon the T. & N. O. the necessity of pushing ahead the Nipissing Central Railway so as to be ready to take in supplies and material.

A provincial charter has been granted to the Ojibway Timber Lands, Limited, with headquarters in Port Arthur and a capital stock of \$250,000, to sell and deal in timber and lumber, own and operate sawmills, manufacture pulpwood and all by-products of lumber, etc., as well as paper pulp. Among the incorporators of the company are Hugh Keefer, Wm. Cooling and Arthur Young, of Port Arthur.

The winter mill of the Hocken Lumber Co., which has been in operation for some time past at Deer Lake, twenty miles north of Parry Sound, on the C. N. R., has closed down for the season. The cut was about a million and a half of white pine and hemlock. As soon as weather conditions permit, the company's mill at West River, near Espanola, will be put in operation, and it is expected that during 1920 the output of white and red pine will be eight million feet.

The Alfred McDonald Lumber Co. of Peterboro, Ont., has just com-

pleted a new box factory. A. Dick, general manager, reports that there has been quite a number of new industries located in Peterboro recently, and that the housing situation is serious. Less than one quarter of one per cent. of the dwellings are vacant and these are the usual dilapidated places which are not fit to live in. In view of these conditions, the Alfred McDonald Lumber Co. felt that it was necessary to prepare for a busy season, and along these lines decided to make more room for each of the three departments,—sash and door, planing mill and box factory, which were crowded into two floors. By erecting a new building for the box factory, this extension has been carried out. The company are now in a better position than formerly to handle the factory requirements of the city and district.

Eastern Canada

The Export Association of Canada, Limited, Montreal, have become members of the National Hardwood Lumber Association of Chicago.

The death occurred recently of J. A. Melanson, South Bathurst, N. B. For many years he was one of the foreman of the Bathurst Lumber Company.

The Consumers' Cordage Company, Limited, Montreal, are constructing a new factory (rope walk), at an estimated cost of \$80,000. It will be a two-storey building, on a site 150 x 60 ft.

J. Stanley Scott, who was with the Canadian Forestry Corps Overseas, has purchased the lumber mill of J. F. Doherty at Springhill, on the St. John River, five miles above Fredericton, and will erect another mill in the vicinity.

La Compagnie "La Blanc" Ltée., Montreal, P. Q., have been incorporated to manufacture and deal in wood and stone and to carry on a general saw mill and stone business. Capital \$49,000. J. A. Roch and H. Roch are among the incorporators.

The Great Eastern Pulp & Paper Co., Limited, Quebec, P. Q., have been incorporated to manufacture and deal in timber, pulpwood and other wood products with a capital stock of \$8,000,000. J. S. Cook and A. A. McGee are among the incorporators.

The Canadian Pulpwood Corporation, Limited, Montreal, have been incorporated to carry on a business in the manufacture of pulp, cardboards, and other paper materials, with a capital stock of \$1,000,000. Among the incorporators are J. Kerry and A. S. Bruneau of Montreal, P. Q.

The Vanderbeck sawmill at Millerton, N. B., was recently burned. It had been lately repaired at a considerable cost and just started sawing. The loss is partly covered by insurance. R. A. Snowball of Chatham, N. B., ran the plant which he expects to have in running shape again in a few days.

A party of American capitalists left Quebec recently with Mr. John Burns of Charlesbourg, to open up and operate the pulp mills at Peribonka, which have been idle for some years back. This enterprise controls vast timber limits near Peribonka and the opening of these mills will help solve partly the newsprint problem.

A federal charter has been granted the Standard Export Lumber Co., Ltd., with a capital stock of \$24,000 and headquarters in St. Lambert, Que., to buy, sell, export and deal in raw and manufactured lumber, wood, standing and cut timber, etc. Among the incorporators of the company are Stanley Barker and L. H. G. Kerr of St. Lambert.

In the annual report of the Nova Scotia Steel and Coal Company, it is stated that during the year valuable timber areas in Pictou and Guysborough Counties were secured, and these, together with the company's former holdings in Nova Scotia and Newfoundland, constitute a large tract of both mature and growing timber which will supply its needs for many years.

W. Garfield White, lumber merchant; Harry H. Reid, both of Sussex, and Judson A. Cleveland, of Alma, have been incorporated as The Alma Shipbuilding Company, Limited, to acquire and take over as a going concern the shipbuilding business now being carried on by Charles T. White & Son, Limited, at Alma, N. B., with a capital stock of \$24,000 and the head office at Sussex.

The lumber cut on the Restigouche this past winter is about the largest in the history of the port of Campbellton. The stock of sawn lumber on hand in the yards, together with the stock to be driven through the Corporation boom this spring, will make an immense amount to export. It is understood that ample bottoms are available to take care of the export trade, fully seventy-five per cent. of which is for the United Kingdom.

G. L. Tapley, manager of the St. John River Log Driving Company, states that the company's fleet of tow boats had been overhauled and are in readiness for the opening up of the river. He stated that the lumber cut had been extensive in all sections of the province, and would probably average more than twenty per cent. over last year's cut. In the river districts lumber had been all hauled out and lumbermen now were only waiting for free water before starting the towing operations.

American capital is looking into the possibilities of pulp and paper making along the St. John River. The International Pulp and Paper Company has taken over the pulp and paper plant at Keegan, with river shore rights and timber limits, and will make large additions, including a kraft paper mill. A material boom is expected along the Upper St. John River, Edmundston already having a pulp and paper mill in operation. Americans are now said to have about \$10,000,000 invested in pulp and paper-making in New Brunswick.

Price Bros. have started the work of erecting the model city of Saguenay, which will be a new pulp and paper centre, located about three miles from Chicoutimi. The preliminary work is in full swing. The company will at the outset erect about four hundred houses. New pulp and paper mills will be put up at Saguenay, the output of which will be the largest of any possessed by the company. All dwellings will be of brick, electric light and heat, which is a novelty heretofore unseen in modern cities, and should prove a great economy in fuel.

The Fraser Companies, Limited, of Edmundston, N. B., are now turning out bleached sulphite pulp at their plant in Edmundston. The present production is about 100 tons per day and the firm intend to instal two more barking drums which will somewhat augment the capacity. The Fraser Companies report that the past winter has been a very good one for operation in the woods, but that last month was bad for hauling. They will have a considerable increase in their cut over last season. The situation regarding export at the present time is somewhat in doubt and not a great deal of lumber is going forward.

156 Duke St., Toronto

Export of Logs Hotly Debated

Hon. Mr. Bowser once more challenged in vain the determination of the B. C. government to allow for ten years the export of logs by discretionary order-in-council. He moved that the right should expire in one year. He was supported in speeches by Mr. Ross and Mr. Hawthornthwaite, but his amendment was voted down by 25 to 16, the nine Conservatives, five soldiers, Mr. Hawthornthwaite and Mr. Wilson, Liberal member for Rossland, voting for it.

Mr. Bowser repeated most of his arguments of the previous day, augmenting them by the statement that at present the American mill men were in a peculiarly advantageous situation in competing with the Canadians for logs as their money had such an advantage in exchange, and once the bars were down plants would be established and it would be difficult to raise them again.

The premier said the leader of the opposition would lead the house to believe that the whole aim of the government was to dispose of the resources of British Columbia to capitalists south of the line, though last year the total export allowed was only 11,000,000 out of 1,200,000,000 feet. His whole argument and loud declamation was for cheap advertising and to place the government in a false position in the eyes of the people. He would be glad to meet his friend on the platform and to travel from one end of the province to the other with him to discuss the matter.

"When?" asked Mr. Bowser.

"My friend should not be in a hurry," said the Premier, "because he himself put on the statute book the legislation lengthening the life of the legislature, and he should not quarrel with a privilege he himself provided.

Mr. Ross said the Premier had made the statement that the late government had for years allowed the illegal export of lumber. As he had been in charge of the department of lands at the time he wished to say that they had stopped the export of logs. The chief offender was a gentleman closely connected with his friends opposite, but finally he had been stopped.

Hon. Mr. Pattullo said that to show that the mill men were not afraid of the government abusing the privilege of exporting logs he knew of one company that was putting in a plant of two million dollars, which had been held up by the late government as they could not get water rights.

Mr. Bowser said that in 1916 this company had told the government they were not in a position to go on. They said nothing about water rights.

Mr. Hawthornthwaite said while they had the right to pass acts binding on the life of the present government, they had no right to extend them to bind future governments. With the American people discounting our money it was no time to grant privileges to them.

Mr. Cowper said the question of American exchange had nothing more to do with it than who won the war. Owing to the drain for the purchase of agricultural products there was a balance of trade against the province, and if they could get in outside money to balance that they should do so.

Riordon Company's Earnings Increase

The Riordon Pulp & Paper Company's (Montreal) annual statement for the year ending December 31, 1919, shows a considerable increase in gross earnings as compared with the previous year, the total being \$1,810,126, as compared with \$1,443,046 in 1918, an increase of \$367,080, or a little over 25 per cent. The actual profits

from the operations of the pulp mills of the Riordon Company itself showed a slight decrease from that of 1918, however, the figures being \$1,099,251 for 1919 as compared with \$1,225,596 in 1918. "Other income," however, showed an increase of over \$430,000, rising from \$52,537 in 1917 to \$425,662 in 1918 and \$859,540 in 1919. This increased income, it is understood, is due to the large earnings of the Ticonderoga Pulp & Paper Co., of New York, a subsidiary of the Riordon Company, whose earnings have averaged for some time 100 per cent. on the comparatively small capitalization of the company, and which has been paying a generous dividend to the parent company.

Comparison with the year 1917 is rendered a little difficult owing to the fact that under "depreciation" there was included an allowance for exhaustion of the timber limits of company, and the amount was thus raised to \$766,055 as compared with \$33,39 in 1918 and \$225,098 in 1919. In the latter two years the allowance for the limits was made separately, being \$208,213 in 1918 and \$148,665 in 1919. The comparison is best seen when it comes down to the balance, \$336,396 in 1918 and \$225,098 in 1919, against \$1,106,650 in 1918 and \$1,177,596 in 1917. Against this there is a deduction of an increased amount of interest, over double that of 1918, leaving a net balance of \$1,135,161 against \$886,563, or after allowing for bond discount of \$200,000, net earnings of \$935,161 against \$886,563 in 1918 and \$1,032,942 in 1917, all of which amounts were applicable to dividend.

Pulp Business Booms in New Brunswick

It is believed that the province of New Brunswick is in for a period of expansion in the pulp and lumber industry.

There are four large pulp companies operating in the province of New Brunswick at the present time, namely:

Nashwaak Pulp & Paper, St. John, N. B., and Marysville.

Fraser Companies, Limited, Edmunston.

Bathurst Lumber Co., operating a large sulphite mill at Bathurst.

Dominion Pulp Company at Chatham.

Maritime Sulphate Co., at Millerton.

It is understood that the International Paper Company, which has a lumber company at Chatham only last week acquired an additional 122 square miles. It is understood this company also controls the Grand Falls, N. B., water power rights, and it is rumored that there is to be a large pulp and paper mill to be erected there.

It is also understood that some Canadian and American financial interests have acquired the Dominion Pulp Company at Chatham and about 400 square miles of limits.

Aerial Patrol for Alberta Forests

The scheme to establish an air patrol of Alberta forest reserves will be put into effect during the coming summer, according to Col. R. H. Palmer, chief fire ranger for the northern section of Alberta. A patrol of the eastern slope of the Rocky Mountains, beginning in the south, is to be carried on this year.

It will be entirely experimental at first. Suitable landing-places must be located before the patrol can really be established and wireless stations will also be a necessary part of the scheme. Two machines are already on the way. The plan is that the aeroplanes will be used for the purpose of locating fires. The fact that a 65-mile range is possible at an elevation of 5,000 feet indicates the great usefulness of the air patrol as an addition to the other protective measures.

For Economy and Convenience

The question of what milk to use in a lumber camp is largely one of transportation and storage. Fresh liquid milk is, therefore, entirely impossible. One must look for a form of milk which, while retaining its natural flavor and full food value, is reduced in bulk and weight and has greater keeping qualities than liquid milk. This milk must of course be low in price and purchasable in large quantities.

Klim is the solution of the lumber camp's milk difficulties.

It is fresh separated milk, pasteurized, and reduced to a fine powder. It contains all the food elements of separated milk in their natural state, perfectly soluble in water. It is convenient because the exact quantity desired can be used without endangering the keeping qualities of the powder left in the tin. The natural flavor

of the fresh separated milk remains unchanged in Klim.

Klim bulks smaller and weighs less than any other form of milk. It can be shipped anywhere in any climate by freight and requires no refrigeration or special storage because it is dry and will keep indefinitely. A whole season's supply can be shipped in at one time. Klim is most economical—it costs less and there is no waste.

Klim, when whipped into water, becomes again fresh, natural-flavored separated milk and can be used as such in soups, gravies, bread, biscuits, pies, cakes, tea, coffee, cocoa and other foods and drinks.

Klim is sold by all wholesale grocers and supply houses in 10-lb. tins, 6 tins to a case—each tin makes 40 quarts. Order with your grocery supplies.

Where Belts Meet Dampness!

Goodyear Extra Power Belt Delivers Power and Lasts

Damp or wet belts usually slip more easily than dry belts.

Water and moisture form a thin film between pulley and belt.

Here "Extra Power" Belting especially displays its advantages.

Where there is water, moisture or steam—around the beaters in paper mills, for instance—Goodyear Extra Power delivers the power load just as under more favorable conditions.

Because Goodyear Belting has a rough friction surface which bites through the film of water and clings to the pulley, costly slipping is overcome.

Moisture rots belts, if it gets into them.

Goodyear Extra Power is rubber-sealed against moisture.

Not just enclosed in a rubber envelope.

The high-grade rubber in Extra Power is forced through and through the fabric, surrounding and protecting every strand, making a belt practically a solid unit.

That Goodyear Extra Power Belting is just as efficient and just as economical in damp or wet places as in other transmission uses, is proved by these satisfied users:

The Provincial Paper Mills of Thorold got 16 months' service from Goodyear Extra Power on a Jordan Pump where they had been getting about one month's service. They also say—"In the room where our beaters are located, the air is constantly damp. Here we have found Extra Power so superior that we use it exclusively."

Some other firms who will be glad to tell you of the satisfactory service of Goodyear Extra Power under damp conditions are:

Mittagami Pulp & Paper Co., Smooth Rock Falls, Ont.

Port Arthur Pulp and Paper Co., Port Arthur, Ont.

North West Laundry Co., Winnipeg, Man.

Dominion Pulp Co., Chatham, N.B.

Bathurst Lumber Co., Bathurst, N.B.

Gloucester Lumbering and Trading Co., Bathurst, N.B.

If you use belting, it will pay you to hear about the Goodyear way of supplying it. It will cost you nothing to have a Goodyear man call and show you how to overcome your problems. Phone, wire or write the nearest branch.

DISSTON-SAWS

THE BEST KNOWN SAW IN THE WORLD

Each year finds a greater number of leading mills using Disston Saws exclusively. Mill operators know that the success of their mill—the quality and quantity of lumber they turn out—depends on the saw they use.

It is natural, therefore, for them to choose Disston Saws—the acknowledged standard in quality for 80 years.

LEVIATHAN- ANACONDA

The BELTS of STRENGTH and SERVICE

Leviathan and Anaconda belting represents more than strength. Endurance under all conditions is what has made these belts famous.

The New Main Belting catalogue awaits the request of all interested users.

It contains a comprehensive treatise on the evolution of the transmission belt and its essentials.

You should have this book in your files.

A REAL GUARANTEE

Our responsibility for each LEVIATHAN and ANACONDA Belt extends beyond payment until the belt has earned in actual service its full cost as compared with the service of any other belt of any kind, under the same or similar conditions, barring accidents.

We regard this as the only guarantee that is fair to the buyer.

Would You Spend \$575 to Save \$2,000?

Last Fall a certain lumber concern in Ontario purchased a small 10 H.P. Double Drum Belt Driven Hoist from us for handling logs. This machine cost them \$550, plus \$25, freight, total \$575. They operated this small Hoist by a belt from a gasoline Engine, the whole making a light, compact, portable outfit, easily moved from place to place.

They were able to work this outfit in the coldest weather, and found that it did the work of three or four teams.

As it required only one man to operate the Hoist, it is easy to figure the daily saving effected by the use of this machine. In other words, compare the wages and board of one man and the cost of a little gasoline with the wages and board of four drivers and the feed and upkeep of eight horses.

This machine handled up to one thousand logs per day.

We make these machines for either Steam or Gasoline Power, and in 7 sizes, one of which should be just right for your use.

Marsh Engineering Works, Limited, Belleville, Ont.

ESTABLISHED 1846

Sales Agents: Mussens, Ltd., Montreal, Toronto, Winnipeg & Vancouver.

A Good Belt Saves Money

THE money wasted in keeping a stretching belt taut amounts to a surprising figure. If you use "Goodhue Belts" in your mill or factory you can save most of this money because "Goodhue Belts" stretch less by 15 to 25 per cent. than any other belt. They are made from skillfully selected hides with the stretch taken out of each section before it is made up into the belt.

According to the conditions under which the belt is to run, we recommend "Extra," "Standard" or "Acme Waterproof" belts.

Send for further particulars and prices.

GOODHUE BELTS
J.L. GOODHUE & CO. Limited.

DANVILLE — QUEBEC.

The Northern Lumber Co. of Cloquet, Minnesota, has for years been using our babbitt metals. Here is what their Chief Engineer wrote about Aluminum Genuine Babbitt:—

"In one instance, I used your Aluminium Genuine on a 7" crank pin of a 30 x 48 Corliss Engine. It has been running two seasons at 85 R.P.M. and has never warmed up once and wedge block has not been drawn up to exceed $\frac{1}{8}$ of an inch."

Real evidence of this character from a practical man is worth more than volumes of "just talk." Aluminium Genuine Babbitt will run cool under any speed; it will stand up any pressure or impact. Shall we send you a sample bar?

Makers of Syracuse Babbitts

DIAMOND ST. & MESEROLE AVE., BROOKLYN, N.Y.

What's Your Basis of Belt Buying

Is it any quality for a price?
Is it known efficiency in your power transmission?

Is it on the recommendation of someone else?

It is on sentiment?

Or is it on a thorough knowledge of what it will accomplish?

A poor belt will cost you more in lost power, lost time, lost efficiency than the price of a good belt—therefore you should eliminate the element of guess by specifying the correct type and size of

Dominion Friction Surface Belting

But unless you are thoroughly acquainted with belting requirements—the thickness and width to carry a given load, and other such technical subjects—you should profit by our experience, which may be had for the asking.

A phone, wire or letter to our nearest service branch will bring to your plant, at your convenience, and without cost, one of our belting engineers, who will analyze your transmission requirements and specify a belt that will efficiently and satisfactorily meet your needs. Send that request today.

Our Dominion Hose, Packing and Industrial Rubber Goods are all the Same High Standard as Dominion Friction Surface Belting.

BEAVER BOARD

for Better Walls and Ceilings

The Mark that Insures the Result

This trademark is for your protection as well as your customer's. It stands for genuine Beaver Board and is plainly printed on the back of every panel of this good wall and ceiling material.

Beaver Board is more than a "knotless, crackless manufactured lumber"; it is a long lived and attractive wall and ceiling result.

When you sell Beaver Board for new homes or for remodeling or repairing you sell this result, and your customers expect it. They have come to look for the familiar Beaver Board trademark.

But nationally known products have many other advantages. Quick turnover is one—Beaver Board is in steady demand all the year around. Easy to sell is another. Beaver Board sells other kinds of lumber, too.

Our new book, "Right Hand Help for the Beaver Board Dealer," offers many valuable merchandising suggestions. Ask about Beaver-tone, a new velvety flat Beaver Board Paint.

Why are some beds better than others

THE power of a principle is the most wonderful thing in the world. The manufacturer who starts with a principle can accomplish anything. He can even produce a bed that *invites sleep* instead of repelling it.

PERHAPS you have never slept in or seen a proper bed.

A great many people do not yet know what a bed should be—or *why*. The old wooden bed persists—warped, unsanitary and creaking with age.

The average metal bed is hardly less noisy.

IT MAY be news to you that there is anything better to be had than the average bed of the average store.

This better bed is the Simmons Bed with the Waldorf Box Spring.

The Simmons Metal Bed starts with the principle that a bed is made to sleep in. It is noiseless.

Even a slight noise keeps the nerves on edge, though it may not wake the sleeper. The body cannot relax into sleep—sound sleep—unless the nerves are relaxed.

The Simmons Bed will not creak or rattle.

When you push or pull it by one post, the whole bed moves as a unit. You will not feel it shake in your hand—not a sign of unsteadiness.

It is strong—correctly made. It will not pull to pieces or wear loose.

And the Waldorf Box Spring invites *complete* relaxation. It supports the body *at ease* on fine resilient spring coils—each coil conforming freely to the contours, so that the spine is perfectly rested, whether one sleeps on the back or on the side.

FOR thirty years, the products of Simmons Limited have been a household word in the better homes of Canada.

Today Simmons Limited has five factories, producing Beds, Springs, Mattresses and Pillows, and numbers the users of its products in the hundreds of thousands.

It is the leader in *Twin Beds*—a separate bed for each sleeper, welcomed everywhere by nice people, and a great aid toward sound sleep and glowing health.

You will not pay any more for a Simmons Bed than for any bed of good average quality.

It costs no more to work to a principle than to go at the job blindfolded.

Simmons styles are better. There are more of them. A business that

covers the Nation cannot be local or provincial.

The soundest merchant in every section is sure to have Simmons Beds, Waldorf Box Springs, Mattresses and Pillows.

And when you are selecting your Simmons Beds with an eye to their appearance in the room, you will see that Simmons has for the first time established *beautiful and authoritative design in Metal Beds*.

FOR every Canadian, sleep is the most important personal issue of the time.

No one can remain healthy and efficient without enough sleep—sound sleep.

Five million Canadian men and women are working mightily with hand and brain.

Two million Canadian children are growing up.

They all need sleep—plenty of it—deep, sound, restful.

Where are they to get it—

In a creaky, rattling bed—on a spring that knocks, sags and humps?

Or on a noiseless Simmons Metal Bed and Waldorf Box Spring, and a Simmons Mattress and Pillow!

Sleep is a big subject! Write us for the brochure, "What Leading Medical Journals and Health Magazines Say about Separate Beds and Sound Sleep." Free of charge.

J. T. PAYETTE, Proprietor

The Machine That Made a Record in a Recent Lath Cutting, 10 Hour Test

Four Hundred Sawmills in the Dominion are to-day using this machine.

It has all the latest improvements and for quick, clean work has no equal.

The Payette No. 1 Bolter will cut, count, tie and pile 128,350 laths in a period of ten hours. The above consisted of 4 foot laths, 1½ by ¾ inches, and constitutes a record in rapid lath cutting.

If you are not using a Payette No. 1 Bolter you should be.

Shall we send you full particulars and prices?

No. 161 Self Feed Saw

A big fast feed capacity saw with adjustable feed rolls for feeding short stock. Mandrel is extended for gang ripping and has four bearings. This is a production machine of the highest type and which will prove a cost reducer in any type of wood-working plant.

Write for circular and price.

Hall & Brown Wood Working Machine Co

Saint Louis, U.S.A.

Home Office and Factory, 1913 to 1933 North Broadway

FIRE BRICK

We make several brands of fire brick made by every known process of manufacture from a selection of various high grade Pennsylvania clays. This enables us to furnish the best adapted fire brick for your boilers, dutch ovens, refuse burners, kilns, etc.

We specialize in fire brick for power plants and if you will advise us whether your boilers are hand fired or stoker fired and kind of fuel used we can then give you the proper brick for your work.

We carry a large stock of our different brands in various sizes and shapes in our Hamilton warehouse, which enables us to ship at once.

We manufacture the following well-known brands:

**"Elkco Special," "Elk Steel,"
"St. Marys," "Keystone" and "Rotex"**

Write for copy of our catalogue,

Pyrene Fire Extinguishers

Are the Ideal Fire Protectors for your mill, for the following reasons:—

- 1st—Pyrene is death to all inflammable fires.
- 2nd—Pyrene does not freeze at fifty degrees below zero.
- 3rd—Pyrene does not deteriorate.
- 4th—Pyrene is easily operated and ever ready.
- 5th—Pyrene reduces your Fire Insurance rate 15 per cent when installed on your Automobile or Motor Truck.
- 6th—Pyrene has served with the boys at the front.
- 7th—Pyrene in one of our Holsters is ideal for your watchman in case he locates a fire in your building.

We also carry the 2½ Gal. Soda Acid Extinguisher

Ask for our Catalogue which contains a full line of fire appliances, also for our book on how to protect your factory. This book contains valuable information.

A Bell Locomotive

—will best meet your needs

We claim for this geared locomotive a 50% greater tractive capacity over any type direct connected locomotive of equal weight.

One man operates the Bell with ease. It runs on Kerosene, fuel oil, distillate or crude oil, minimizing fuel expenses. It is strongly built with each part interchangeable, all of which can be supplied promptly from our stock.

Tell us of your requirements and let us give you full particulars.

Sizes 2 to 24 Tons.

Saves fuel - Saves time - Saves horse flesh

ATKINS STERLING QUALITY SAWS

Sterling Quality Steel— Atkins' Exclusive Formula

The most essential feature of a saw is the material used in the blade. It must be hard, so as to prevent the teeth from bending or dulling easily. It must be tough enough to withstand hard knots and obstructions. It must file and set readily to save the filer unnecessary time in refitting. Yet, it must not be brittle, or the teeth and points will break off in use or in refitting.

When we say that a blade is of Atkins high grade special steel, we mean that it measures up to these conditions in the highest possible degree.

The formula for the manufacture of this steel is our own exclusive property. The product is exceedingly smooth and close grained and is actually as fine in quality as the metal of your keen edged razor.

Atkins Saws prove their worth through the Sterling Quality of their steel. Always use ATKINS.

TAPATCO
REGISTERED BRAND TRADE MARK

GLOVES & MITTS

Well Known in the Lumber Camps

There must be more than ordinary quality in a work-glove to stand the lumber-camp test. The lumberman does not handle things gently—he works. And he wants a glove that will work with him. He has found such a glove in the TAPATCO Brand—and he likes it so well that thousands of these gloves go into the woods every year to help bring in the logs.

The styles the lumbermen like best are our heavy weight Canton Glove and the leather-faced glove which we make for heavy service.

"TAPATCO" COLLAR PADS

Keep the Horses Fit

A Pad so well made that it gives long service—with hooks so secure that they do not work loose. Use these pads to protect the necks of your horses. They prevent friction and so remove all possibility of sores, galls, and chafing.

This is an advertisement in the Graton & Knight campaign on Standardized Leather Belting. It appeared in the Saturday Evening Post, January 31, 1920.

Graton & Knight

Standardized Series Leather Belting

Tanned by us for belting use

A Forty-Seven-Year Belt

This twenty-four-inch Graton & Knight Belt has transmitted power on one drive for forty-three years. It withstood four years of neglect. Its efficiency today is unimpaired.

In 1872 the belt was placed on a water-wheel drive in a woolen mill at Central Falls, R.I. For thirty-three years it did its work well. The plant was shut down in 1903 and was not reopened until 1907, when the Central Falls Mazda Lamp Division bought the property.

Upon inspection the wheel-pit and part of the belt were found covered with rubbish. The belt was a sorry sight, and the first decision was to junk the mess. Cleaning operations, however, showed that the belt was practically uninjured. The power was turned on, the belt picked up its load, and has been carrying it ever since, driving a sixty-eight-inch pulley from a ninety-six-inch wheel.

That this veteran of forty-seven years is doing a youngster's work today is proof positive of the quality of Graton & Knight Tannage of Leather. In 1872, as now, Graton & Knight were making the right belts for the job to be done.

Graton & Knight have classified the requirements of every kind of power transmission, and make a standardized belt to meet every demand. Write for their book, "Standardized Leather Belting," which gives valuable information on belting power transmission.

THEY CUT CLEAN

ALOXITE Saw Gumming Wheels cut clean. They cut free.

This is true, because every little, hard, sharp, tough Aloxite grain gets a real chance to do its work.

The skillfully made Aloxite Grinding Wheels are open or porous enough to give each grain what might be termed a clearance—allowing it a full opportunity to cut.

The bond holds the grain just long enough, breaking down at just the instant the grain is dulled.

Fresh grain, fresh cutting edges are thus brought into play and the wheel always cuts clean—cuts free.

These are just some of the reasons why Aloxite Saw Gumming Wheels will do everything good saw gumming wheels should do—plus.

Oldest and Best

HOE

Chisel Tooth Saws Choice of Lumbermen Everywhere

The even temper of these saws and the fine quality of steel from which they are made have proved Hoe saws reliable for nearly one hundred years.

More than one hundred thousand "Hoes" are to-day successfully sawing lumber in all parts of the globe. The Hoe Chisel Tooth Saw, invented 40 years ago, is still the best for cutting hardwood.

Rubber Goods FOR LUMBERMEN

Belting Our long experience in the making of Rubber Belts enables us to specialize on this line. "P.M.S.," "Special Drive" and "Lion" are our leading brands for power transmission.

Packings "Redstone" High Pressure Sheet Packing has proved by test that it will outlast any other similar packing on the market. We make Spiral and Ring Packings, etc., that are equally reliable.

Hose for Steam, Water, etc., in various grades, made especially to give satisfactory and economical service under different conditions.

Fire Hose One or more of our twenty brands of Fire Hose will be found, not only in the best equipped Factories, Mills, etc., but in almost every Fire Department in the Dominion.

Your

WIRE ROPE

Requirements

IN the choosing of wire rope of any description, strength will undoubtedly be your first consideration.

Strength, however, can only be ensured by the scientific construction of the best materials.

In this respect your choice of our products will be a wise one. Both material and structure are rigidly tested before leaving our factory.

Let us quote on your requirements.

EQUIPMENT

1/16/20

Our STANDARD EDGER

This is the rapid, accurate and efficient way to handle the needs of the mill of medium capacity. With solid one-piece base the machine remains perfect in alignment. It is simple in its mechanical perfection all through. Our catalogue explains it fully. We should like you to have one.

Williams & Wilson Ltd. Montreal

Some Waterous Bandmill Advantages

1.—It is built in 8, 9 and 10 ft. sizes—one for every kind of work.

2.—The spring-cushioned, all-knife-edged tension device is the most sensitive in use.

3.—Upper and lower guides swing about the exact centre of the saw blade.

4.—The upper guide is raised and lowered by steam, an accurate, easy and swift adjustment unequalled by any other.

5.—Wheel raising device and tilting device are roller bearing.

6.—All operating mechanism is enclosed within the columns—saw-dust and slivers cannot reach it.

7.—Massive design of bed and columns precludes vibration during cutting. This mill is absolutely steady doing the heaviest work.

8.—Mandrel bearings, both upper and lower, are easily adjustable and align rapidly and accurately.

9.—Every part of the mill is designed to make millwrighting easy and adjustments and inspections can be made without difficulty.

10.—Waterous Band Mills are designed and built in a plant that has specialized in the manufacture of Canadian sawmill machinery for more than seventy years.

INTERNATIONAL

By reason of the high wages now being paid, the necessity of keeping accurate time records is more apparent than ever before.

Accurate time accounting through the use of an International Time Recorder protects both employer and employee, eliminates all wage disputes, and stimulates punctuality every day.

TIME RECORDERS

The operation of the Recorder is simplicity itself—your employees simply press the lever opposite their number and their time is accurately printed on a sheet inside the Recorder. A glass door permits the employee to see the records. But they cannot be tampered with.

GARLOCK-WALKER'S List of Wood Working Machinery in Stock

Manufactured by

American Wood Working Machinery Co.

If you scan any Second Hand Machinery lists it is seldom you will find an "AMERICAN" machine on it, which is the finest kind of recommendation for the "AMERICAN" line.

THE GARLOCK-WALKER MACHINERY COMPANY have a few in their stock rooms as listed below. They are lucky to have them and you will be lucky to get them.

It is hard for us to make reasonable delivery on new machines these days. So if you want an "AMERICAN" machine of the type listed below don't be afraid to purchase it of GARLOCK-WALKER.

- 1—AMERICAN FIG. 640, FOUR SIDED BOSS TIMBER SIZER, capacity 30" wide, 20" thick, 8 feed rolls, straight knives on all heads, only three years old, good as new.
- 1—AMERICAN No. 229, FIG. 660, 9 x 6 HARDWOOD FLOORING MACHINE, equipped with six knife round top and bottom heads, knife setting and jointing attachments, thoroughly overhauled, in first class condition.
- 1—AMERICAN No. 229, FIG. 660, 9 x 6 HARDWOOD FLOORING MACHINE, same as above.
- 1—AMERICAN FIG. 8442, No. 26, 10" x 4" FOUR SIDED FAST FEED OUTSIDE MOULDER, with slip on and off top and bottom heads, latest type machine, complete, overhauled and in A1 condition.
- 1—AMERICAN FIG. 8442, No. 26, 10" x 4" FOUR SIDED FAST FEED OUTSIDE MOULDER, same as above.
- 1—AMERICAN FIG. 8442, No. 26, 10" x 4" FOUR SIDED FAST FEED OUTSIDE MOULDER, same as above.
- 1—AMERICAN FIG. 8412, No. 22, 10" x 4" FOUR SIDED OUTSIDE MOULDER, in first class condition.
- 1—AMERICAN FIG. 8521, No. 5, 8" x 4" HOUSTON FOUR SIDED OUTSIDE MOULDER, overhauled and in A1 condition.
- 1—AMERICAN FIG. 8601, 6" x 4", FOUR SIDED OUTSIDE MOULDER, new.
- 1—AMERICAN FIG. 5014, No. 111, 54" BALL BEARING BAND RESAW, carrying blades up to 7" wide, capacity 30" vertically using extended rolls, 22" without extended rolls; from 1/8" to 20" horizontally, will centre split a 16" timber; cut a veneer from 12" stock, rates of feed from 32 to 192 feet per minute; only three years old; in first class condition.
- 1—AMERICAN FIG. 5859, No. 3 DOUBLE CUT-OFF SAW, capacity between saws 8" to 6' 9", 4" thick, 30' wide, equipped with two 16" saws and power adjustment to movable table; new machine.
- 1—AMERICAN FIG. 5610, No. 25 EDGING AND RIPPING SAW, complete with countershaft; new machine.
- 1—AMERICAN FIG. 541, No. 4 CIRCULAR RESAW, with 24" saw, in good working order.

- 1—AMERICAN FIG. 5701, No. 2 SELF-FEED CIRCULAR RIP SAW, capacity 25" wide, 6" thick, equipped with 14" saw and countershaft.
- 1—AMERICAN FIG. 604, HEAVY SWING SAW, right hand to hang from ceiling, equipped with 48" saw and shield, almost new. 84 feet of ROLLER TABLE for use with above SWING SAW.
- 1—AMERICAN FIG. 616, No. 7 1/2 COMBINATION SAW BENCH, with full set of gauges, without dado head, in first class condition.
- 1—AMERICAN FIG. 6390, No. 1 DOUBLE ARBOR UNIVERSAL SAW BENCH, with tilting table, full set of rip, cross-cut and mitre gauges, including one 16" rip saw and one 16" cut-off saw, countershaft, in A1 condition.
- 1—AMERICAN FIG. 6390, No. 1 DOUBLE ARBOR UNIVERSAL SAW BENCH, same as above.
- 1—AMERICAN FIG. 575, No. 2 HAND FEED RIP SAW, with countershaft.
- 1—AMERICAN FIG. 6312, CROSS-CUT SAW BENCH, movable saw operated by foot treadle, capacity 10 1/2" x 2 1/2", particularly adapted for cutting off crating stock; in A1 condition.
- 1—AMERICAN FIG. 514, 36" BALL BEARING BAND SAW, with wire screen guards for top and bottom wheels; in first class condition.
- 1—AMERICAN FIG. 824, 24" BUZZ PLANER, fitted with square cylinder, power feed attachment and countershaft; in A1 condition.
- 1—AMERICAN FIG. 937, No. 1 SINGLE SPINDLE SHAPER, with plain countershaft; in first class condition.
- 1—AMERICAN FIG. 1110, No. 6 DOUBLE DISC SANDER, 36" diameter discs; in first class condition.
- 1—AMERICAN FIG. 1126, No. 9 UNIVERSAL KNIFE GRINDER, capacity for knives 31" long, two sided knife bar, one side fitted with clamps for holding thin high speed knives, one side slotted and fitted with bolts for holding ordinary thick knives; in A1 condition.
- 1—AMERICAN FIG. 1127, No. 9 UNIVERSAL KNIFE GRINDER, same as above.
- 1—AMERICAN FIG. 1145, No. 2 DOUBLE END EMERY GRINDER, bench type, complete with countershaft; in A1 condition.

In addition to the machines listed above, we have a complete line of high grade new and used machinery for any and all purposes.

We solicit your enquiries.

Fir and Cedar Lumber Red Cedar Shingles

Western Crown Lumber Company
ROGERS BUILDING VANCOUVER

Re Shingle Nails

British Columbia Red Cedar Shingles

*are too good for a poor
shingle nail. : : :*

Used for roofing or siding and properly laid, British Columbia Red Cedar Shingles give a lifetime of service

But

the life of your roof or siding is shortened if it is fastened with an improper nail.

The common "blued" wire nail is not a proper nail for fastening shingles. Nails of this type rust quickly, with the result that the life of the covering of your building is shortened by years.

For the laying of shingles we recommend the use of Galvanized, Cut Iron or Zinc Coated nail. These types of nails are rust resisting. Their use where subject to climatic and weather conditions is strongly recommended.

British Columbia Red Cedar Shingles defy rot or decay. Use them with a nail that is rust resisting—Then you have a perfect combination.

Send for a supply of our Dealers' Booklets. It tells all about British Columbia Red Cedar Shingles—how to lay them so as to give maximum service.

209 Winch Building,

VANCOUVER, B.C.

Many Eastern Canadian Firms have never used
either WESTERN SOFT PINE or WESTERN
YELLOW LARCH.

The extremely heavy demands for lumber in 1920
may force them to use these woods. We hope so,
and also that some of our product may be available,
for we know we will then have made many life long
friends.

True Blue Service

WE are constantly striving to give our customers the greatest possible service—as our big Service Yard at Logansport indicates.

Furthermore, we sell only high quality lumber—for quality products are always best.

This service and quality are very real. They must be, because it is with them that we assure satisfaction. And every single one of our customers must be satisfied.

You will find it to your advantage to buy hardwood backed up by such service and of such quality that satisfaction is a foregone conclusion. And it is—when you buy of us.

MacLean Machine Works,
Campbell's Bay, Que.

Dear Sirs,—

The Feed Works bought of you has given excellent service. We have not yet lost an hour's time with same; have cut upwards of four million feet of lumber and are still using the same set of friction blocks.

Yours truly,
SMITH BROS.,

Per P. L. H. G. A. Smith.

No delays and the long life of the friction blocks make this a superior machine.

FULL PARTICULARS ON REQUEST.

Original "Dunbar" Machines

We are the original and the only makers of "Dunbar" Shingle Machines, Lath Machines, Clapboard Machines, Steam and Gasoline Logging Engines. Each is the best for its particular work. Are you using the best?

Lath Machine

From our many years of experience we evolved this "Dunbar" Original Lath Machine. Every improvement that could be suggested, every time-tested idea for the betterment of product and for greater speed, has been incorporated in this machine. We believe it has no equal, and there are a great number of mill men throughout Canada who share this belief with us. Carefully constructed of high grade materials and designed to work steadily under the hardest conditions.

Steam and Gasoline Logging Engines

Conditions in Canada necessitate an engine that will stand any amount of strain and hard work in the lumber industry. With this idea in mind we have brought out the "Dunbar" engines perhaps a little stronger than is really needed. They do their work easily and willingly, and stand a great amount of hard usage. Built entirely in Canada for the Canadian lumber trade.

Clapboard Machine

You will need no excuse for the quality of your product if you use the original "Dunbar" Clapboard Machine. Expert in every detail. This machine will give you the very best service under most trying conditions. It will turn out work without delays. It will need practically no repairs and will increase your output. We cannot recommend it too highly because it is giving this very service to lumbermen in all parts of this country.

Send for catalogues of any or all of these machines.

The Machine That Made a Record in a Recent Lath Cutting, 10 Hour Test

Four Hundred Sawmills in the Dominion are to-day using this machine.

It has all the latest improvements and for quick, clean work has no equal.

The Payette No. 1 Bolter will cut, count, tie and pile 128,350 laths in a period of ten hours. The above consisted of 4 foot laths, 1 1/2 by 3/8 inches, and constitutes a record in rapid lath cutting.

If you are not using a Payette No. 1 Bolter you should be.

Shall we send you full particulars and prices?

Canada, United States and Great Britain, \$2.00 per year, in advance; other foreign countries embraced in the General Postal Union, \$3.00.

Single copies 15 cents.

"The Canada Lumberman and Woodworker" is published in the interest of, and reaches regularly, persons engaged in the lumber, woodworking and allied industries in every part of Canada. It aims at giving full and timely information on all subjects touching these interests, and invites free discussion by its readers.

Advertisers will receive careful attention and liberal treatment. For manufacturing and supply firms wishing to bring their goods to the attention of owners and operators of saw and planing mills, woodworking factories, pulp mills, etc., "The Canada Lumberman and Woodworker" is undoubtedly the most direct and profitable advertising medium. Special attention is directed to the "Wanted" and "For Sale" advertisements.

Authorized by the Postmaster-General for Canada, for transmission as second-class matter.

Entered as second-class matter July 18th, 1914, at the Postoffice, at Buffalo, N. Y., under the Act of Congress of March 3rd, 1879.

Watchman—What of the Future?

Many and varied are the opinions expressed in the lumber arena with regard to the future supply and demand, prices and production. It is not possible to find two exponents of the industry whose opinions coincide. There are numerous currents and cross-currents to be taken into consideration, so many "ifs" and "ands" and "n.o.p." clauses (not otherwise particularized) that it is difficult to adhere strictly to the main topic.

Foremost among the views offered are three. One is that further advances, though, perhaps, less strong than in recent months, are certain to continue, and just when the end will be, no one can predict. Then there is the second viewpoint that the peak has been reached and there will be a gradual recession from present values; in fact, it is declared by the conservative that this movement has already started in. The last or third opinion is that prices are bound to take a decided slump very soon with the result that wholesalers and retailers may be caught with a large stock upon their hands.

Some, who have construction problems in view, are delaying operations in the belief that the third state of affairs is about to be ushered in, but so far there is apparently not much ground for such an assumption or forecast. One robin does not make a spring, and the fact that quotations have been easing up in two or three lines, is no warranty that the same condition will apply to other lines or that things are on the toboggan. On the other hand, there are many unerring evidences that values are going to be maintained, and even strengthened, during the coming season. Market levels will continue to be ruled by the relation of the supply to the demand and there is no doubt that the present available supply will be anywhere near what will be required, although production will be increased in many sections, and particularly in Quebec, New Brunswick and Nova Scotia. It is gratifying to record

the output will be enlarged, but it will take a considerable period to eliminate the shortage which developed during the war.

Canada is shy on thousands of homes. The people must be housed, and, while speculative building may, to a large extent, be excluded, there has developed in every community within the past few months a tendency more pronounced than ever on the part of the average tenant to possess his own place of abode. Many excellent and progressive citizens, who could never see the immediate advantage of owning the roof over their head, have been literally turned out on the street by callous landlords who can obtain for their property the highest figure ever known in the real estate world. While selfishness may be the one outstanding consideration that influences such a move the millenium has not yet arrived, and the landlord, who can obtain a fancy figure for his house, is not disposed to give any heed to the character, worth or permanency of a tenant, and in the face of a flood of dollars the latter gets a short shrift. It is only then that the tenant wakens up to a realization of the fact that he should have got into the house-owning game years ago, and the longer he delays buying, the more difficult the problem becomes. Rents are practically prohibitive, and the one great good that has come out of the ascension of property values is to make Canadians more of a home-owning and home-loving people. It is not necessary to dilate upon the advantages and satisfaction of owning a home. These are apparent to every right-thinking and loyal citizen. A man does not erect a home for speculation, and if he has the money to build even at the present cost of structural undertakings, there is no reason why he should wait.

The whole situation was pretty well summed up recently by a western speaker who, when asked if he had a certain amount of money would he undertake building a house at the present juncture in view of the rapidly-ascending values. The apt reply was,—"If I thought more of my money than I did of my family, I would not build, but, if I regarded my family higher than my money, I would build regardless of the high prices."

Everything being taken into account, there is no doubt that the average prospective home builder with his augmented earnings is in a better position now to inaugurate such a step in the interest of his wife and family than he has ever been.

Facts vs. Fiction in Industry

In this edition of the "Canada Lumberman" there appears the first of an interesting series of articles which will be published in early issues concerning the varied activities of the lumber industry and the factors which promote its efficiency, distribution and service. The articles, such as those on "cedar poles" and "lath production," are intended to convey some timely and useful facts written from a popular rather than a technical standpoint, and tell those, who are not located near the large centres of population and markets, or probably find ready sources of information limited, how production, manufacture, demand and the situation generally are shaping up in connection with after-war developments. No attempt is made to predict what the days that are to come will bring forth or to give an authoritative pronouncement on the distant future of any branch of the industry. The present is a time when one man's guess is as good as another's in this respect.

This is the era of tumbling thrones, falling dynasties and shattered predictions and the prophet possesses honor neither in his own country nor abroad. Of course, the great army of "I told you sos," and "I knew it would happen," and "That is just what I thought," will always be with us. Their numbers are legion and increase with the succeeding years, but men of light and leading in the industry, those who believe that discretion at present is golden and who are not placing any wagers on the future, are the ones who can be counted upon in any crisis. They are not carried away by every breath of opinion or stampeded by a passing breeze of adversity or unwonted prosperity, but pursue the even tenor of their way, doing the duty that lies nearest them and facing the future with calmness, confidence and determination. They are not plungers or speculators, croppers or crabs, profiteers or plunderers, but have come up through all the years with steadfastness of purpose and

oneness of aim. Their names are revered by their associates. For their strength of endeavor, stability of character and honesty of effort they are respected and honored. Not one of these bulwarks of the lumber business is engaged in the prophetic role. He is proceeding on the principle that to-morrow's worries can take care of themselves; to-day is the time of preparation—to do the best to meet all requirements and exigencies that may arise. While they do not lack optimism, vision or imagination, these men believe in keeping their feet planted firmly on mother earth and their heads out of the clouds of doubt, uncertainty and evil foreboding.

Higher Wages not the Cure

Every laboring man wants higher wages. Many of them who are not members of labor unions get them, and most of the union members do. Then they wait a short time and again ask for more pay. The high, and mounting cost of living is given as the necessity, and the laboring man is given the advance, either because his employer is impressed with the need, or because the employee has the power to enforce his request.

This is merely a temporary expedient, says the "Mississippi Valley Lumberman." It is not the cure; at least, not the whole cure. It is followed by another request of the same kind because the first advance has made another necessary.

Another common request of labor is for the reduction in the hours of work, and this is frequently granted for the same reason—the employer cannot help himself. This aggravates the trouble. It is neither an expedient nor a cure.

The cure lies in another direction. More labor, instead of less labor; more production, instead of more wages, are the only solutions. Only when the laboring man, whether he works with his head or with his hands, becomes convinced that higher wages and shorter hours will not bring about better conditions will there be a change for the better.

The inexorable logic of the situation is that the high cost of living cannot be lowered while the cost of production is being constantly increased. Shorter hours and higher wages make higher production costs. Longer hours and honest labor will reduce them.

When there is greater production there need, perhaps, be no reduction in the rate of pay; but the value of pay will increase, for with increased production will come cheaper production. Prices can be lowered, and the same amount of men will buy more, or less money will buy as much.

The laboring man, and everybody else, will be better off when their incomes will purchase what they require and leave something for a balance, than when it takes every cent to make ends meet. That can be brought about by increased production.

Editorial Short Lengths

Canadian failures in 1919 were 23 per cent. below 1918, less than one-fourth those of 1915, and the smallest yearly total of which there is record. Liabilities were only \$10,120,232—18 per cent. below 1918 and less than one-third those of either 1915 and 1914.

Be friends with everybody. When you have friends you will know there is somebody who will stand by you. You know the old saying that if you have a single enemy you will find him everywhere. It doesn't pay to make enemies. Lead the life that will make you kindly and friendly to everyone about you, and you will be surprised at what a happy life you will live.—Charles Schwab.

Addressing a recent trade gathering on the value and benefits of publicity a leading speaker told the members that publicity was only another name for good will. Asked how much should be spent on advertising the visiting authority said: "No matter how much you spend on advertising, forget it. Don't expect it back to-morrow; it's the goodwill of the future. That is all you get and all you should want. Take two per cent. of your profits and invest it for the future."

From a dollar a day to a dollar an hour is a rapid ascension all within a few years; yet this is what practically unskilled labor in

certain centres is demanding of employers at the present time. On top of this there is a constant agitation for shorter hours, which materially add to the ultimate cost of any product. Students of economic problems may now get busy evolving some scheme whereby greatly lessened periods of toil, advancing wages and general restlessness can work out lower prices and increased output in the commodity world, and still satisfy abnormal demands.

"Men in some of the western lumber camps are doing for \$135 a month work that I used to do for \$15 a month," remarked a prominent lumberman of Duluth, Minn., in a recent interview. "When I saw these men pitching quoits for a little exercise after their day's work, I said 'This isn't lumbering.' The labor situation is not always going to be what it is today. Things are bound to settle back to normal. I believe there will be a big movement to America from nearly every country in Europe. Now in Duluth we have riveters in the ship yards earning \$24 a day. Their wives have bought all the silks and diamonds in the city. In our western camps the men have their pockets full of money. The low efficiency and high cost of labor are the reasons why lumber is high and why it will remain high. The lumbermen haven't had their inning yet in the general prosperity and they have had twelve pretty lean years."

During its operation of the railroads the U. S. Government purchased only 100,000 freight cars, or about as many as it is estimated were needed to replace the wear and tear of a single year, states the Association of Railway Executives in a recent communication. Only a small percentage of the 2,500,000 freight cars owned by the roads prior to the period of Federal control are on the lines of roads that now own them, the rest being scattered all over the country. During January 1920 out of 2,453,227 freight cars on the lines of the railroads under Federal control, 6.6% were reported as unserviceable as compared with 5.8% during January, 1919, and 5.4% in January, 1918, according to reports of the Operating Statistics Section of the Railroad Administration, and these figures do not include 19,300 cars set aside and classified by the Railroad Administration as condemned cars. Realizing the lack of transportation facilities, the Southern Pine Association, at its recent annual, adopted a resolution urging every manufacturer of southern pine lumber to give special attention to the needs of the builders of cars and wherever possible to exert every reasonable effort to the production of materials suitable for cars.

"In the spring a young man's fancy lightly turns to thoughts of love," according to the poet, and experience and observation compel the admission that the allegation is well founded. But to what purpose is the turning unless to a suitable home for the loved one is available or can be provided? asks the "American Lumberman."

In plain rose, and all seriousness, we are faced by the disquieting fact that the present acute shortage of houses discourages, and in many cases forbids, the contracting of marriages and the setting up of new homes. That this is a fact of far reaching social and economic significance hardly needs to be pointed out. This condition, which has never before existed in this country, at least to the extent that it now exists, must be alleviated, if not remedied, by the building of many thousands of houses this year. The music of the wedding bells must not be hushed. The enforced postponement of marriages because of the lack of houses that young couples can rent or buy upon terms within their reach is unfortunate and may become tragic.

The home is the foundation of the nation, and economic conditions that threaten the normal development of home and family life cannot long exist without serious consequences. Not for sentimental but for the soundest and most practical reasons all good citizens, and there are none better than the lumbermen of the country, must give their best endeavors to encouraging and aiding the building of houses, and yet more houses, until the ideal condition of a home for every family and a family for every home is realized.

What Price Will Lath Command This Season?

Pendulum Swung Far in Direction of High Values—Production is Increasing on All Sides—Supply Not Likely to Equal Demand for Some Time

Lath are still very scarce throughout many sections in the East. A year ago lath could scarcely be given away. They were what might be called a drug on the market and holders were willing to accept most any price, while there were large stocks at nearly all the mills. The result was that everybody had lath, whereas to-day nobody has lath.

What brought about this decided dearth and also the remarkable advance in price? Quotations on lath have been ascending steadily since July last, and to-day lath are worth whatever "the seller has the nerve to ask." Those who had foresight and were willing to take a chance, have cleaned up handsomely but the number who have made a "killing" is comparatively small. Now the rumor has been spread abroad that lath are likely to continue at the same high price for the coming season and everybody wants to get into the game.

Many manufacturers of other commodities are taking up the production of lath as a side line, while not a few woodworking establishments, owners of portable sawmills, dealers in wood and coal, ties and shingles, have added lath bolters to their equipment and are getting ready to contribute their quota to the output for the coming season. Some farmers have been getting out all the cedar and hemlock bolts they can. These bolts are brought in, put on a splitting machine and then run through the lath machine and made into lath.

Why have lath been so scarce and dear? The explanation is easily given. Building operations had fallen off to such an extent that there was a great overplus of lath and manufacturers were quite ready to get rid of them at cost or a little more. Millmen and others did not foresee the sudden boom in the building line in 1919 and naturally a large number did not operate their lath departments during the past few seasons, concluding that there was more money in either selling the rough slabs for firewood or having them converted into pickets, which are used largely by manufacturers in making rollers for window shades. It was a case of the pendulum swinging too far in the opposite direction, and in this helter-skelter world it seems to be a case of one extreme or the other most of the time. Striking a happy medium is not always as easily done as might be imagined.

Will Not Revert to Former Levels

While lath will be turned out in much greater quantities during 1920 than last year and many firms will operate a lath department, whereas during 1919 this section of their mills remained quiet, it is doubtful if lath will ever revert to the price at which they were disposed of before and during the war.

A great deal is now heard regarding the cost of building, and lath are pointed out as one of the "chief offenders" in the augmented outlay. Here is a significant paragraph appearing in an editorial of a leading Ontario daily, which not only utters an opinion without any basic knowledge but jumps at conclusions which are illogical:

"Lath, which sold for \$2.50 a thousand before the war, and which now cost to manufacture—according to reliable authority—about \$3.50 to \$4, are selling for \$23 or \$24 per thousand. Oak for interior is very scarce, and even rough lumber is three and four times what it was two years ago. The lumber men, whose stocks have been constantly jumping in value, must have made fortunes."

In the first place No. 1 lath never sold at \$2.50 before the war, so far as the average lumber manufacturer can recall. The term "lath" is a broad one and some 32 in. stock might have gone at this figure but the price that prevailed for No. 1 white pine lath, 4 ft. long, during 1912-13 was about \$4.50 wholesale. Some mills got a little more, some a little less.

Mill slabs were then selling at \$2.50 f.o.b. cars and labor was cheap and it possibly paid the mills better to operate a lath department than to sell slabs at \$2.50. Roughly speaking, a cord of white pine slabs will make about 1000 lath, three-quarters of which will run 4 ft. and the remainder 32 in. In hemlock about half the output from a cord of slabs would be 4 ft. and the remainder 32 in.

The Way Production Costs Climb

It has long been a live question with sawmill men to determine what figure lath should command in order to make their production more profitable than disposing of the slabs direct for fire wood. During the last year or two it has been more remunerative to dispose of the wood which has been bringing from \$5.00 to \$6.00 a

cord, f.o.b. cars, at a number of Ontario points. Lath have been selling at considerably less than this. In the consideration of price, there must be taken the labor element. In 1912 it was not unusual for a competent man to undertake to turn out the lath in a mill at 75c per M. In 1914 the figure had gone up to \$1.25, 1918 to \$1.75 and now a number of operators are asking \$2.00 and \$2.25 per M. The mill owner has also to pay for all repairs, etc. This all adds to the cost of production, and considering that slabs are now bringing \$6.00 for firewood, white pine lath No. 1 will stand the millman, at least, \$8.00 to \$9.00 per M., with No. 2 possibly \$1.00 less.

It is calculated from every thousand feet of pine lumber sawn the average number of pieces of lath, which a mill will secure, will run about 750. In other words, a mill with a capacity of 30,000 ft. per day of lumber should be turning out, on a normal run, some 20,000 lath, if such a department is operated. In hemlock the proportion will possibly run about fifty-fifty. Of course, the proportion varies in a great many localities, according to the size and the character of the logs, and it is not possible to estimate very closely.

In New Brunswick there has also been a decided dearth of spruce lath, which have been commanding as high as \$15.00, \$16.00 and \$18.00 for No. 1 and corresponding figures for No. 2 and mill run. Nova Scotia, Quebec and other provinces report the same state of affairs.

Everything Being Pressed Into Service

The manufacturers of lath machines were never so busy as at the present time. They have all the orders they can fill both from the sawmills and other customers, and wherever a discard has been for a number of years, it is being furbished up and will be made to do duty. Yet those, who have given close study to the situation, are doubtful if the added production will prove adequate to meet the demands for this class of building material. In any event there seems little prospect of lath receding in price—to any appreciable figure—at least, not for some time. There is no doubt that lath will show great activity during 1920 owing to the splendid demand, and, as stated, it is not thought there is going to be any slump in value, not only by reason of the high values which all wood products command but also owing to the high cost of labor and other contributing factors such as logging, driving, distribution, etc.

How the production of lath fell off is instanced in the case of Ontario during 1917. The lath manufactured in the province, according to figures received from the mills reporting to the "Canada Lumberman," were 226,283,716, while in 1918 there was only 109,441,720. These figures apply to the Georgian Bay and Northern Ontario districts. In 1919 the increase has been comparatively small, the returns showing an output of only 114,066,403. Then in the Ottawa Valley district the same story is told. The lath production in 1917 was 74,466,250, in 1918, 40,294,000 and in 1919, 42,700,000.

The output during the last two years has been practically stationary and only a few mills have added to their production in this line; in fact, some millmen did not operate their lath departments at all but they certainly would have, had they known how scarce this commodity would become and how high prices would soar.

Quotations will, no doubt, be stiff during the coming year but they are not expected to keep up to their present figure. One leading wholesaler stated the other day that he thought No. 1 white pine would command on the average about \$12.00 or \$14.00 at the mill, with No. 2 and No. 3 varying accordingly.

Keeps to the Middle of the Road

A leading retailer, who has closely been studying the lumber situation, says he is much perplexed by the outlook. "Some parties are prophesying that there will be a drop in price and that it is bound to come right away. On the other hand, I hear a number talking the other way and predicting that there will not be any decline for months to come.

"The whole situation needs careful canvassing, and I am hoping that our wholesalers will not ruin themselves in tying up the big stocks at too high prices and expect the poor retailer to help them out of the hoel later on. This is the time for caution, cool-headedness and the exercise of shrewd, common sense. I am neither a pessimist nor an optimist and think that in times of difficulty and danger, the middle course is the best one to pursue."

Demand For Cedar Poles Is Being Revived

Extensions of Telephone and Telegraph Systems and Hydro-Electric Service Create New Business—Value, Production and Supply of Good Poles

The cedar pole industry is one concerning which not a great deal has been heard during the past few years for the reason that the market has been rather quiet. With the outbreak of the war the demand fell off considerably owing to the fact that telephone, telegraph and electric light and power companies made but few extensions to their systems. This condition was brought about through a general policy of curtailment of operations, the scarcity of labor, shortage of metals and electric supplies and the uncertainty of the future.

Most of the large companies, who had been heavy buyers of poles in previous years, were quite content to mark time and merely renew such poles as required from time to time through process of decay, storms and accidents. Now there is a general clamor for the branching out of telegraph and telephone lines, and Hydro-electric operations, in consequence of which more inquiries are being received.

While cedar poles have gone up some in value, the ascension has by no means been as sharp or as active as in other forest products and consequently more attention has been directed to ties, posts, lath, shingles and pulpwood, the call for which products has been insistent with the prices aviating all the while owing to the decided shortage. The farmer and the settler who in previous years put in the winter getting out poles now devotes his time to pulpwood and ties.

All poles are peeled except five feet left at the butt and are contracted for in that manner. Most poles are sold f.o.b. cars except what are purchased from the farmer who generally disposes of them delivered at the nearest railway station.

In early construction days the tamarac pole held sway, but during the last seventy or eighty years the Ontario cedar product has been the one and only wood material that would satisfy purchasers. The largest consumers of poles in Ontario and the East are the C. P. R. and G. N. W. Telegraph Companies, the Bell Telephone Company and the Ontario Hydro-Electric Commission. All these organizations contract for their poles and do not undertake the work of getting out this equipment for themselves.

The Lengths And Diameters

The lengths of poles used range from 25 to 60 and in some cases 70 ft., but the call is principally for 25, 30 and 35 ft. poles with a top diameter of 5, 6 and 7 in. In contracting for poles, the various companies stipulate the number they require and, out of this number, the proportion they want is 5, 6 and 7 in. top measurement. In many instances a further specification is added, setting forth the diameter of the pole at a distance of 5 ft. from the butt. Formerly the butt measurement was not used, but latterly the tendency is to particularize the measurement about 5 ft. from the bottom in order to be assured of sounder material and preserve uniformity, strength and appearance.

Up to within a few years ago, practically all cedar poles in Ontario were taken out by farmers and settlers along the line of the Central Ontario Railway, the Kingston & Pembroke Railway, and the Canada Atlantic line. The supplies along these routes have been pretty well exhausted and where 40,000 to 50,000 poles would annually come off the foregoing fields, ten or fifteen years ago, there are not more than 2,000 to 3,000 taken out at the present time. Now a few scattered supplies are obtained in various parts of Ontario and Quebec, but the principal sources are the Temiskaming and Sudbury districts, while a large number of poles, particularly those of longer lengths, are brought in from British Columbia where the cedar grows to a far greater height than in Ontario. In the latter province out of an average of 5,000 poles, not more than two or three would be of 60 ft. length, while such a length is quite common in Pacific Coast cedar.

Long Life of Ontario Cedar Poles

The Ontario cedar as a rule possesses double the life of the Western variety, and the average career of an Ontario cedar pole

is about twenty years. Of course, its durability depends very much upon the character of the soil in which it is planted, and when decay sets in it is generally just above the ground. The losses which the companies sustain each year in poles, depend to a more or less extent on climatic conditions, sleet, storms, wind, lightning and other destructive agencies which play havoc with the uprights to a greater degree at certain periods than others.

It is difficult to convince the average farmer that there is more money in taking out poles than there is in converting his cedar trees into ties. In the first place not as much manual labor is involved, but he does not look upon this feature. He views the matter from the standpoint of convenience in handling and shipping, and there is no doubt that ties are much more easily hauled to the railway and loaded on cars than are poles of various lengths.

Poles are now cut closer to the roots of the trees than formerly when it was the practice to saw the butt about 2 ft. or 2½ ft. above the ground.

There is a better demand for shorter and stouter poles with smaller tops than in former years owing to their greater strength and durability. Much attention is paid to the soundness of the timber at the butt end in order to be assured of its long life.

How Values of Poles Are Gauged

Owing to the rapid expansion of rural telephone lines and the Hydro-electric system, the call for poles is likely to be greater in the near future.

As already pointed out, the price paid for poles has not ascended in sympathy with that of other forest products, and only about 75c more prevails to-day for the shorter poles than the figure which they commanded before the war, and on the longer lengths the difference is from \$1.50 to \$2.50. The prices, which poles bring depend very much on their straightness, uniformity, appearance and availability. The average figure for a 20 to 25 ft. pole is from \$2.00 to \$2.50, and each pole must be peeled and delivered on the cars. From 30 ft. up the price paid is about 50c extra for each additional 5 ft. until poles of 60 and 70 ft. height are reached. These are brought in from the Pacific Coast province and can be laid down here, freight paid, at about \$16.00 to \$17.00 apiece. Quotations not only vary according to length but also on the basis of top measurement, 5, 6 or 7 in. diameter. For each extra inch above the 5 in. base, the value increases in the same ratio as each 5 ft. in length. Each 5 ft. extra length brings about 50c per pole.

While in the construction of many transmission lines, steel towers and concrete pillars are used, there is no indication that the cedar pole is being numbered among the institutions of the past. A sufficient supply may be more difficult to get than a few years ago, but all the big companies are still calling for thousands of these supports, the average length being 25 ft. to 35 ft. All unusually long poles are used in carrying electric lights, telegraph or telephone lines over depressions or through uneven country in order to keep the wires at as nearly a uniform height as possible so that they can the better resist the elements and in order that the strain may not be as great as when there is an uneven distribution of weight and tension.

Square Deal Will Head Off Bolshevism

Among the speakers at the recent annual convention of the National Wholesale Lumber Association, held in Washington, was H. H. Stevens, M. P., of Vancouver. His subject was "Individual Responsibility to the State," and his remarks were frequently applauded.

He urged the necessity for the principles of justice and equity in the laws and their enforcement. Even handed square dealing, he said, would go further to heading off Bolshevism and other destructive elements than all the force that could be brought to bear. If the great problems are to be really solved, Mr. Stevens said, justice and equity must be applied. He illustrated his point by referring to the loss of the American colonies by Great Britain, which, he said, was clearly due to a failure on the part of the British Government and Parliament to apply these principles in dealing with the colonies.

Mr. Stevens also spoke of the century of peace and amity between the United States and Canada.

The High Prices of Lumber are Here To Stay

Values Will Go Still Higher Unless the Public That Owns Forests Speedily Initiates Recuperative Measures—Reinvestment of Revenues Urged

By Dr. C. D. Howe, Faculty of Forestry, University of Toronto*

Dr. C. D. Howe, Toronto, Ont.

It is my privilege to attempt to give an idea of the forest resources of Canada. In order to do this I shall first outline the character and distribution of our forests. Next, I shall describe, so far as we know it, their status as producers of saw logs and pulpwood. Finally, I shall draw some conclusions with regard to forest conservation and forest recuperation.

The land area of Canada is approximately 3.5 million square miles. Our first point to consider is what proportion of this enormous extent of country is covered with trees and what proportion of the tree covered area is today actually bearing saw logs or pulpwood. By referring to the map, we first notice the area in the far north designated as Barren Lands. This area in-

cludes at least, one half million square miles, a region in which the climatic conditions are too inhospitable for trees and often even for the more lowly plants.

South of the Barren Lands there is a very sparsely wooded trans-continental belt containing about 700,000 square miles. This is the "little stick region" with real trees only along the water courses. It will never materially contribute to our supply of saw logs or pulpwood, although the scattered local patches of forest will always be valuable to explorers, fur traders, and we hope some day to the mining interests which may develop there. This is the region also that we hope some day may be covered with flowing herds of reindeer. Let me say in passing that no one is more interested in the proposal to raise reindeer in this region than the forester. The fundamental conception of his profession is that every acre of land should be producing something of value, and only the crop to which it is best adapted. A forester does not wish any area to be covered with trees, if it will give a better financial return to its owner in some other crop. There is no antagonism between the forester and the farmer. The forester begins where the farmer leaves off. The slogan of the forester is: Make the loafing acre work.

As you know, the western part of the Dominion is mountainous. It is so mountainous that, at least, 200,000 square miles are above tree line—too cold and too high for trees. As you also know, the prairie-plains region of Canada covers about 200,000 square miles. We don't know just why this region is treeless. There are many opinions, but very little exact knowledge on the subject. Since, however, this great area is on the whole agricultural, or, at least, capable of becoming agricultural, the forester rejoices that it is treeless.

If we add these areas of treeless regions, as given above we find that 1,600,000 square miles are incapable of producing commercial forests. Over 40 per cent. of the land area of Canada is either too cold, too high or too dry to produce saw logs or even pulpwood. This is a fact that is overlooked by those who talk boastfully of inexhaustible forest supplies.

Subtracting the treeless areas from the total land area, we get 1,900,000 square miles of forested country. So you see we have an enormous area of tree covered land. Let us now examine these areas to find what they will yield in terms of saw log and pulpwood material. They may be covered with trees, but are they covered with commercially valuable trees? I shall answer that question by saying that from one half to two thirds of our forests have been destroyed by fire in the past 75 years. It takes twice that length of time in the average forest conditions to make a spruce saw log, that is a tree 12 inches in diameter. In other words, forest fires have destroyed the saw logs on over 1,000,000 square miles of good Canadian territory. Ninety per cent. of those figures were caused by sheer carelessness.

We are already beginning to feel the pinch of the diminishing supply of accessible timber. You will more readily comprehend what the destruction by past fires means when I say, that the loss is equivalent to about 450 years supply at our present rate of consumption of four billion board feet a year. Let me emphasize the point in another way. All the destroyed timber was on crown land, land that belongs to the people and from which the people collect a tax when the timber is out. The smallest tax collected by any government, Dominion or Provincial, is 50 cents per thousand board feet. It runs from that up to \$2.50 per thousand feet. If we apply the lowest rate to the amount of timber destroyed by fire, we find that the public treasury has lost around one thousand million dollars in potential royalties alone.

What Forest Fire Losses Mean

I am bearing down hard on the significance of forest devastation by fire because, although I have spoken of it in the past tense, it is not in the past; it still continues, but in the past ten years the rate of destruction has probably increased. Every acre of accessible timber burned on crown lands makes it harder for you and me to live. It means a loss of public revenue from a source nature gave us free of charge. This loss has to be replaced by taxation, either direct or indirect, and you and I eventually have to pay it.

It is not my purpose to discuss the forest fire problem at this time; but I wish to say this. Our forests now in charge of governmental bureaus will never be made reasonably safe from destruction until more time and thought, more money and energy are put into the development of the technique of fire fighting. Fighting fires in the bush requires specially trained men and special machinery just as does the fighting of fires in the city of Toronto. Merely sending a large number of men into the woods each summer as patrolmen will never be an entirely efficient method. Such men can fight only the one-man or two-man fire and it is only a few minutes that a fire remains such. Means must be provided to get a crew of fire fighters quickly on the spot. This involves the making of roads, trails, the cleaning out of canoe routes and the building of telephone lines, hard, expensive, non-spectacular work, but fundamental in any efficient systems of forest fire fighting. Already the methods of detecting fire are developed far ahead of methods of fighting. The lookout tower on a mountain top fails to be efficient if there are no means of sending men to the fire which it has reported. The aeroplane may detect many fires in a few hours, but the knowledge of their existence is of little value unless there are means of quick transportation of men to the fire. The lookout towers, the aeroplanes are of spectacular interest and excite the public fancy—but they do not extinguish forest fires. They are only auxiliaries in a firefighting system and they can be efficient auxiliaries when the ground work is completed. It will cost money to develop transportation systems for the fire-fighters in the forest, and the consumer of forest products will pay the cost.

How Man Kills the Young Trees

At least one half, and probably very much more, of our commercial forest bearing area has been burned in the past three-quarters of a century and consequently does not now contain timber of saw log size. This is a very deplorable fact. Nature, however, is a great restorer; in time she heals all wounds. So in time she might recover those 1,000,000 square miles of burned country with commercial trees. She often begins the process, but man interferes by allowing the young trees to be burned. Nature tries again, but man the second time kills the young trees she has shown, and so on repeatedly. Man has out-Pharaohed Pharaoh in his treatment of the forest. He has killed not only the first born, but the second, third, fourth and successive generations of your commercial trees.

I know areas in the Ontario pineries that have been burned thirteen times in the past 50 years. There are thousands of square miles of one time productive forest lands in Canada which are being gradually transformed into man-made deserts from the standpoint of commercial species through the agency of repeated fires. This state of affairs is little known or appreciated by the general public. They think so long as non-agricultural land is covered with trees all is well, when as a matter of fact the country is growing poorer all the time if commercially valuable trees are replaced by trees of inferior market value, as always happens in the case of repeated

*Address delivered recently before Royal Canadian Institute, Toronto.

forest fires. The chief object of a forester is to cover non-agricultural lands—and to keep them covered—with the largest quantity of the highest priced trees possible. That is only another way of saying that a forester is a business man who is trying to get the largest and longest continued financial return possible from the capital his employer has invested in the land.

The Value of Forest Investigations

Let us come back to the classification of forest lands. We have found that one half commercial forested area does not at this time contain saw logs because of destruction by forest fires. By saw logs I mean trees 12 inches or over in diameter. How much we can depend on the extensive burned areas for the future supply of commercial trees unfortunately we don't know at the present time. So far as areas goes one half our future supply should come from these burned-over lands. So far as our knowledge does go, however, the outlook is not very encouraging for such reports as we have indicate that about one-third to one-half the burned-over lands are not reproducing the valuable species in potentially commercial quantities. A careful survey of conditions and study of the rate of growth on the old burns is imperatively demanded before we can make any reasonable prophecy as to the future supply of timber—in eastern Canada especially. Such work has already been initiated on a small scale by the Dominion Forestry Branch, the Commission of Conservation at Ottawa and by your Provincial Forest Branch. It is earnestly hoped that funds may be supplied for the immediate and continued extension of such investigations.

Subtracting the 1,000,000 square miles of burned forest lands from the total forested area, we find there are 900,000 square miles of unburned forest in Canada. More than half this great area, or about 500,000 square miles, does not contain much saw timber (trees larger than 12 inches in diameter), but probably enormous quantities of pulpwood. I refer to the Ungava-Hudson Bay drainage region. Large trees are found only along the stream courses and on the flats around lakes. On the upland areas the trees run from 6 to 8 inches in diameter on the average and they are full grown, in fact over 100 years old.

Continuing our deductions, we find that we possess only about 400,000 square miles of forest capable of producing saw logs, trees at least 12 inches in diameter, or territory equivalent to about one-eighth the total land area of Canada. As you know, this area occurs in two great blocks at the two extremes of the country, one in the East, the other in the West, and they are about the same size, namely 200,000 square miles each.

B. C. Timber Will Last 300 Years

In considering the present condition of these saw log bearing areas, let us begin in the West. The Commission of Conservation at Ottawa has recently completed a survey of British Columbia's forest resources. It was found among other things that the timber on two thirds of the forested area has been destroyed by fire. The loss by fire in British Columbia alone is nearly equivalent to the estimated amount now standing in the entire Dominion. Yet in spite of this great destruction, British Columbia has today sufficient timber supply to last her nearly 300 years at her present rate of consumption. If it were easily accessible the supply of the whole Dominion at its present production could come from British Columbia for the next 70 years. In addition to this, British Columbia is estimated to contain sufficient pulpwood material to furnish the present annual output of the Dominion for more than 50 years.

The West may be our savior in timber supplies. Such supplies are a long distance away; the transportation charges will be high. It may be, however, that the public in the eastern provinces will pay such heavy charges in preference to being bothered with the care of their forests at home. If we should in the future draw heavily on western supplies, we should always remember that a small portion of the freight charge on each thousand feet of lumber from British Columbia reinvested to promote new growth in the forests at our doors would have rendered them continuously productive of saw logs for all time.

Coming eastward, we find that the forest resources of Alberta have not been determined. We know, however, that around three-fourths of the entire east slope of the Rocky Mountains has been burned within the past 50 years, thus so far as relative area is concerned the saw log producing forests are limited. The young growth, however, is reported to be coming on vigorously and it is a valuable asset. In crossing the region north of the prairies in Saskatchewan and Manitoba, we would find less than one per cent. of the trees larger than 6 inches in diameter—partly due to fires and partly due to climatic and soil conditions. We usually do not think of timber in connection with the prairie provinces, yet Saskatchewan cut nearly 90 million feet of boards, Manitoba over 50 million, and Alberta more than 33 million feet in 1917.

I trust I shall offend no one when I say that we have no very re-

liable estimates of the quantities of commercial timber in Ontario, although there have been many guesses. These guesses are based on the estimated forest area and the estimated yield per acre. They can be made in any office with the aid of a map and pencil. Ontario has about 10,000,000 acres under timber license and practically the same area in pulpwood concessions. The Province also holds about 7 million acres in forest reserves. A guess of the standing pine, Ontario's principal lumber product, made 10 years ago, was equivalent to 40 years supply at the then rate of cutting. Statistics of production show that the output of white pine has decreased by more than one-third in the past 20 years. This means that the cut is 400,000,000 feet less than at that time. At \$2.00 per thousand royalty it also means a decrease in revenue from pine of \$800,000 in the past 20 years. Taken at their apparent value, the statistics of provincial revenues, however, show no decrease. But if one examines the figures, he will see that the apparent revenues are maintained not by the collection of royalties but by selling stumpage, that is, by reducing the capital stock.

Unless the forests of Ontario are growing faster than we believe they are, we are becoming poorer each year by such treatment. When we consider the enormous destruction by fire of standing timber and especially the young growth, the destruction by windfall and insect diseases, and the apparent deficiency of natural regeneration on unburned cut-over lands, it seems apparent to us that we are constantly reducing our forest capital, but I must confess that we have not as yet sufficient statistical data as the result of investigation and research to make such a statement as a scientific fact. The Commission of Conservation at Ottawa at the present time is making a survey of the forest resources of Ontario. This work will probably last about 5 years. At the end of that time we will know more about our own conditions than we do at present.

Systematic Study of Rate of Growth

The Forest Service of the Province of Quebec also is gradually acquiring data with regard to the forest resources of that Province. The Province of New Brunswick is making a very detailed survey of its resources. This will be completed within a few years. Now, the Province of New Brunswick is also, in co-operation with the Commission of Conservation at Ottawa, making a systematic study of the rate of growth of the forests. When the Province knows by actual measurements just how much timber it has and how fast it is growing it will be able to practice forestry; which means, in general, the taking from the forest each year only an amount equivalent to the annual growth and leaving the forest capital to continue that growth indefinitely, as it will do if protected from fire and from disease.

I have already referred to the fact that the destruction of forest capital by repeated fires has been so great that it is probable that it, in combination with the amount of material taken away by logging, results in the depletion of the capital stock.

For several years I have been engaged in the study of the amount of young material and its rate of growth on cut-over, unburned pulpwood lands in Ontario, Quebec and New Brunswick. The studies have been made in the mixed forest type, hardwoods associated with spruce and balsam. I find that as a rule in this type there are not nearly as many young spruce trees to make the future crop as has been taken away by logging operations. The usual condition is about one-third as many. I find also that these areas, which have been cut over several times in the past 40 years, are accumulating spruce wood at a much slower rate than it is being cut. On the average as much spruce has been cut in the past 40 years as it has taken nature about 250 years to produce. In other words, the annual growth in the past 40 years has been only about one-sixth as great as the harvest. These results apply only to a definite type in definite river valleys. We do not know whether they are representative of the conditions in the whole of eastern Canada. It is very important that we should know and, only until such studies have become much more extensive than they now are, can we predict with reasonable accuracy the duration of our forest resources based on the present annual consumption.

How Long Will Pulpwood Supply Last ?

Owing to recent discussions of the subject in the press, I suppose you would be much interested to know how long the supply of pulpwood in our eastern forests will last at the present rate or at the expected increase in the rate of consumption. Estimates have been made which extend all the way from 15 years to 1,000 years. About 30 years ago a prominent lumberman predicted that the timber supply of eastern Canada would not last 25 years—and we still have some timber left. Yet his prediction came true. Using the standard of his time, he was right. In those days they were cutting trees two feet in diameter. It apparently did not occur to him that the use of smaller trees would become profitable. If we were today dependent upon trees two feet in diameter for our timber or

Dr. Howe in Pithy Paragraphs on Canada's Forests

The higher the price of lumber the closer the utilization of the forest.

* * *

The northward migration of pulp and paper mills has already begun. I believe it will continue.

* * *

The higher the price of lumber, the greater will be the value of our forests and, consequently, the greater will be their protection. We protect the things we value.

* * *

I believe that the community should share in the increased price of lumber and a certain portion be reinvested in the forests by the community, and thus keep our woodlands at our market doors continuously productive.

* * *

Fighting fires in the bush requires specially trained men and special machinery, just as the fighting of fires in the city.

* * *

One-half to two-thirds of our forests have been destroyed by fire in the past seventy-five years. It takes twice that length of time in the average forest conditions to make a spruce saw log.

The annual growth of spruce in the last forty years has only been about one-sixth as great as the harvest.

* * *

If we were to-day depending upon trees 2 in. in diameter for our timber or pulpwood supplies, we would be facing a famine.

* * *

There is no antagonism between the forester and the farmer. The forester begins where the farmer leaves off.

* * *

The West may be our saviour in timber supplies. Such supplies are a long distance away and the transportation charges will be high.

* * *

Every acre of accessible timber burned on Crown lands makes it harder for you and me to live.

* * *

As the demand for lumber increases, the supply decreases, and the prices go up. It will cost you more to build your house in the future. The furniture you put in your homes will cost you more than at present. Newspapers will cost you more.

pulpwood supplies we would be facing a famine. Except in protected places, softwood trees of that size are gone from the forests—and they will never return. There are very few areas of commercial timberlands in the St. Lawrence drainage basin and in the Maritime Provinces that have not been cut over at least once—most of them several times and some of them five or six times in the past 60 years, and each time smaller trees and more inferior material were taken. Rising prices of lumber made this possible.

The higher the price of lumber, the closer the utilization of the forest. Trees too small to be utilized today may and in all probability, will be used 10 or 20 years from now. Estimates as to the continuance of the spruce pulpwood supply are usually based on trees 12 inches or more in diameter, for this is the diameter limit below which spruce trees may not be legally cut in Quebec, where the pulp and paper industry is centred. Personally, I believe that the supply of spruce trees of that class will not last very much longer at the present rate of increase in pulpwood production in eastern Canada. In fact, the diminishing of the supply has already begun.

When the shortage of spruce trees over 12 inches in diameter becomes acute, there will be, at least, three courses open to the pulp and paper companies. They may bring pressure to bear to get the 12 inch diameter limit removed so they can utilize the smaller trees in the forest, or they may substitute other woods for spruce. The latter process has already begun.

Poplar and Birch May Be Used

Woods not now extensively used may be pressed into service, such as poplar and birch. Enormous quantities of these species as yet practically untouched are to be found in eastern Canada. The making of pulp from poplar requires a different process from that of birch and each in turn a different process from that of spruce. So if the hardwoods were used instead of spruce, the pulp mills would have to be reorganized, new machinery installed and new processes established. This would be expensive, but it would be done if necessary—and the consumer of pulp products would pay the cost.

The other alternative before the pulp companies when the supply of 12 inch spruce gives out, would be to move northward into the Hudson Bay region and utilize the small undersized spruce to be found in the north country where thousands of square miles are covered with spruce from 4 to 8 inches in diameter. It has attained full growth; it will never be any larger and might as well be cut. As you know, the northward migration of pulp and paper mills has already begun. I believe it will continue. I believe the next generation will see the centre of the spruce pulpwood industry on Hudson Bay waters instead of on St. Lawrence waters. The manufacturing costs will be high, the transportation charges will be heavy—and the consumer will foot the bills.

The lumber industry in Ontario and Quebec began on the shores of the Great Lakes and the St. Lawrence River and it has been pushing northward ever since. The fact that we have to go farther and farther away from the markets for the supply of our material has been reflected year by year in the increasing prices of lumber. The present high prices of lumber are a response to supply and demand.

The chances are that unless we undergo some great industrial crisis, the prices of lumber will never be very much lower—at least,

until we attain the adjustments of a stabilized industrial development and that is several generations ahead of us. The demand increases, the supply decreases, the prices go up. What else can you expect? It will cost you more to build your houses in the future. The furniture you put into your houses will cost you more than at present. Your newspapers will cost you more. Everything into which wood products enter will increase in price largely because you have neglected to protect and conserve your great natural forest resources lying on non-agricultural lands, almost at your doors.

Community Should Share in Profits

I say the high prices of lumber are here to stay, and I will also say that they will go still higher unless the public that owns the forests initiates at once recuperative measures. The sooner the great industrial consumers of wood fibre realize this the better. If the newspaper publishers know where their bread is buttered, they will use their columns much more extensively and effectively than they have in the past, in the endeavor to convince the public that we cannot wantonly deplete our forest resources without paying the price, and consequently urge methods of handling our forests that will keep them in continuously productive condition.

I trust you will not consider me tinged with "red" when I assert my belief that the community should share in the increased price of lumber. In British Columbia, for example, when the market value of lumber goes above a certain price agreed upon as furnishing the producer a reasonable profit on his investment, the royalties exacted by the Province increase in definite ratio. Thus the people as a whole profit by the upward trend of prices. I would suggest that a certain portion of such a graduated tax be reinvested in the forest by the community to accelerate the regeneration and growth of the commercial species and thus keep our woodlands at our market doors, continuously productive. Most private business is sustained by a reinvestment of a certain portion of its profits. The communities' forest business can be sustained only in the same manner.

The Dominion Government spends about \$3,000,000 a year for the encouragement of agriculture, which is another way of saying that amount is reinvested in the business of increasing the productivity of the farm soil. The forest soil products have a value equal to that of our wheat crop, yet we are reinvesting almost nothing to continue its productivity. The lumber industry created for Canada in 1917 forest products valued at \$116,000,000. The pulp mills of the country produced in the same year materials to the value of \$96,000,000, a total of over \$200,000,000.

The lumber and pulpwood industries stand third as producers of wealth in this country, being surpassed only by agriculture and manufacturing. We reinvest a portion of the earnings of agriculture and of manufacturing to keep these industries going, but with the exception of spasmodic planting we have reinvested very little of the forest revenues to encourage the regeneration of the present commercial species. We must do this. We must reinvest a certain portion of our timber and pulpwood revenues on the promotion of new growth if we would keep our readily accessible forests continuously productive, if we would maintain the continued prosperity of our third largest industry—and that is only another way of saying if we would maintain the continued prosperity of our country.

Nova Scotia's Lumber Cut Largest in Years

Favorable Winter For Operating in Spite of Objectionable Features—Shipbuilding Continues Strong with Active Demand for Bottoms of all Kinds

By E. Woodworth, Parrsboro, N.S.

The winter now ending, or, according to the calendar, now ended, has been a remarkable one in many respects. January had more zero weather than any month in forty years, and even the traditional "January Thaw" failed to make its appearance. The snowfall in many sections was exceptionally heavy and interfered seriously with transportation. Fierce gales swept the Atlantic almost continuously and exacted a heavy toll in shipwreck and loss of life. And finally torrential rains and melting snow flooded all the valleys, overflowed the streams and did an immense amount of damage to bridges, railways and other property.

But notwithstanding its objectionable features it was a wonderfully favorable winter for lumbering. The frost came early and the swamps were frozen solid before any snow arrived. Then for two months or more while there was plenty of snow for yarding there was not enough to interfere with chopping. Even before the snow was settled by the rains its greatest depth in Nova Scotia was from two to three feet, while in northern New Brunswick it was a little deeper. In short there was snow enough to make excellent sledding for an unusually long period, and not enough to seriously impede other work. As a result of these favorable conditions the lumber cut this season has been unusually large—much larger than in any year since the beginning of the world war.

It is estimated that from 100,000,000 to 150,000,000 feet of lumber was held over in Nova Scotia last year, and to add even the smallest of the estimates to this season's cut would make a total output far exceeding any in recent years. The demand at present appears to equal the supply, and prices if they go much higher will surely be prohibitive. In the United States, it is usually claimed that the year of a presidential election is a poor year for business, particularly in the building trades, but this year American buyers have been in the provinces anxiously looking for lumber suited to their requirements. Large shipments will be made to American ports when navigation opens, and considerable quantities of laths have already been shipped from Parrsboro by rail, the price, it is said, being fifteen dollars per thousand. In this connection a somewhat unusual incident may be mentioned. A representative of the well-known firm of Henry Disston & Sons has been in Nova Scotia this year trying to buy apple trees. The wood of the trees is wanted, he said, for making saw handles. Apple trees are abundant in the Annapolis Valley and in some other parts of the province, and some old trees may be sold for wood, but as a rule they are not for sale, unless the farms where they grow are sold with them.

According to present indications the only thing that is likely to prevent a record shipment of lumber this season will be a scarcity of bottoms. There are more vessels in commission this season than in any recent years, but there is not likely to be enough. The fleet of big schooners built along this shore last year will help to make up the shortage. They are practically all owned here, and are all working back this way to be ready for the lumber trade. Possibly one or two of the smaller ones may carry gypsum to New York, for big freights are offered in that trade, but as a rule they will all handle lumber. Six large schooners are building at Parrsboro and along the shore, and one or two of these will be launched as soon as any lumber cargoes are ready for shipment. One or two may not be launched before mid-summer, but they will all do a turn as lumber carriers. But the schooners now in commission and all that may be added to them will play but a small part in handling all the lumber that will be ready for shipment and some of the shippers have already engaged a number of steamers. Dunfield & Co., of Halifax, besides engaging a fleet of schooners, have chartered half a dozen American steamers of which two, at least, will load at Parrsboro and the others will go to Halifax. They have also chartered an American tern schooner to load at Parrsboro for an American port, and it is probable that it will be followed by a number of cargoes for the same destination. The freight rates are standing about the same as they did last year, say at about three hundred shillings per standard for the United Kingdom, but, of course, it is impossible to foretell what fluctuations there may be before the season is over. It is a significant fact, however, that while some of our people prefer to do business in dollars rather than in shillings, some of the American shipowners insist on having their charters made in sterling.

The shipbuilding boom appears to be dying out in some parts of the Dominion, and in some places it is very dead already. This

is not the case in Nova Scotia. Last year was a banner year in our shipbuilding operations and we may never again turn off so many vessels in the same space of time, but we shall keep on building them for some time to come. Many vessels have been launched along our southern and western coasts since the year began, and many more are being built. It costs a lot of money to build them now, for materials and labor have reached extreme prices.

Record Lumber Cut Along the Miramichi

More than 160 million feet of lumber has been cut on the Miramichi river, in New Brunswick, this season, and is being brought out by the spring's driving operations which have commenced.

The cut on the Southwest Miramichi amounts to more than 100 millions—some say 103 million feet are the exact figures—and the increase over last year's operation is almost 70 per cent., the output last year being about 60 million feet. The biggest operators this year are the Fraser Companies, Ltd., whose total cut on the Southwest Miramichi amounts to about 31 million feet, while the Miramichi Lumber Company are next with 23 millions, and D. J. Buckley has about 15 million feet.

The cut on the Northwest Miramichi amounts to a strong 60 million feet. The Sinclair Lumber Company have about 10 millions coming out and so have the Ritchies, Burchills and one or two other concerns. The Miramichi Lumber Company's cut on the Northwest Branch has been about 7 millions, bringing their gross output up to about 30 million feet the past winter.

Chief Foe of our Forests is Fire

The Forest Products Laboratories, Forestry Branch, Department of the Interior, Ottawa, have recently issued a series of blotters, setting forth some expressive statements in connection with the preservation and protective measures generally with respect to the future timber policy of Canadians both as individuals and as a people. There is no doubt that the strong, stirring messages against fire, its destruction and the need of eternal vigilance on the part of those who have timber possessions, will bear fruit.

Some of the statements are as follows and they are right to the point:—

Canada has much land too poor to grow farm crops but just suited to the growing of forest trees. If this land is kept in forest it will help our farmers, manufacturers, merchants, carriers, and workmen. But if the forest is destroyed, the land will become a barren desert, streams will dry up, and business and industry will be injured. The chief foe of our forests is fire. Most fires are caused by carelessness. Therefore, be careful with fire.

The more prosperous the farming community the more need it has of forest products. Lands in Western Canada not fit for farming are set apart as national forests and reserved for the use of the surrounding community to supply it with firewood, rails and saw-timber. Regulated use by stock-owners of the grazing and hay in the forest reserves is provided for. Help to protect the people's forests from their enemies, the worst of which is fire.

Most of the land on which our Canadian forests now stand is not suitable for agriculture but it is suitable for growing fine crops of trees to keep our saw-mills, our wagon factories, our furniture factories, and our paper-mills running at full force forever. Let us all take part in protecting our valuable forests. Fire is their enemy. Therefore, be careful with fire.

Living forests provide us with wood material of all kinds for our homes and industries, but burned forests provide no lumber for the saw-mill, no work for the workingman, no business for the merchant, and no freight for the railway or steamship.

BE CAREFUL WITH FIRE

Forward Movement in Selling of Shingles

Change to Different Method of Packing and Marketing the Product—How Handling by the Square is Being Received—New Rules Now In Effect

By Frank L. Nash, Secretary Shingle Agency of British Columbia

The manufacturers of Red Cedar Shingles on the Pacific Coast have long left that a large majority of consumers of shingles considered that one thousand shingles were equivalent in covering capacity to one square of other forms of roofing material, and as all other roofing, excepting shingles, were quoted on the square basis, that to continue the old method of the thousand as a unit, an unfair discrimination was being made against shingles by this method of packing. Consequently a change to a different method of packing was thought to be for the best interest of the industry.

The thousand unit of packing shingles is as old as the shingle industry itself. When shingles were first made by hand, with the use of a draw knife it was a comparatively easy thing to make a solid bundle of shingles. That is, the shingles were packed 25 double courses to the bundle, four bundles to the thousand, with a tolerance in packing of only one fourth inch to each course. When the shingle machine was introduced it was found impractical to pack the shingles with as little tolerance as one quarter inch to the course, and changes were made in the packing rules allowing openings in each course, which today is one and one half inches, and consequently what has been sold as one thousand shingles really only contains about 925 shingles, figuring four inches butt measurement as a shingle; a shingle of eight inches in width counting as two shingles.

Forward Movement in Marketing

Much has been said for and against the new method of packing shingles. Some dealers and manufacturers believe that it is too radical a change, but in nearly all cases where it is fully understood it is looked upon as a forward movement in the method of marketing this product, and will ultimately be for the good of the industry.

Regarding this change to the square unit, dealers should remember that there is absolutely no change in the grading of these shingles. All first grade British Columbia shingles will continue to be strictly clear, vertical grain, and free from sap. The packing rules are all that are effected. Sixteen inch shingles will hereafter be packed 22 double courses to the bundle, four bundles constitute one square, and when so packed will when laid $4\frac{1}{2}$ in. to the weather, cover one hundred square feet of roof surface. Whereas, the old method of packing one thousand shingles, which is a misnomer and really means four bundles of about 925 shingles, will cover when laid $4\frac{1}{2}$ in. to the weather, approximately 116 square feet.

One will see from the covering capacity of a so-called thousand shingles and a square of shingles, that the price quoted per thousand would be considerably higher than the price on the square basis. The square prices will be about 12% less on 16 in. shingles than the thousand price. That is, if one thousand shingles were sold at a price of \$10.00, the square of 16 in. shingles would sell at \$8.80 and leave the dealer the same margin of profit.

Four Bundles to the Square

Eighteen inch shingles will be packed 18 double courses to the bundle, four bundles to the square, and when laid five and one-half inches weather exposure, will cover one hundred square feet. One thousand 18 in. shingles will cover, when laid $5\frac{1}{2}$ in. weather exposure, 140 square feet of roof surface. On eighteen inch shingles sold at \$12.00 per thousand the corresponding price per square would be \$8.64 and the dealer would receive the same margin of profit.

This change of packing shingles should not be looked upon as a radical change, not to be considered, but as a forward movement in the merchandising of Red Cedar Shingles and one that should have the hearty support of all persons connected with the industry. It will cause no inconvenience to the dealer, simply a matter of quoting on the square basis in place of by the thousand, and at the proportional reduced prices. True, it will cost the manufacturer a trifle more to pack on this basis, but the improvement in placing their product before the consuming public will more than compensate for the additional cost. Then, too, a square of shingles, regardless of the number, signifies a definite covering capacity and a standard for weather exposure, both for 16 in. and 18 in. shingles.

Thus, by selling Red Cedar Shingles on the square basis their price will be more easily compared with other forms of roofing, and what has been an injustice in quoting shingle prices heretofore will be rectified.

The following are the new grading and packing rules for British

Columbia Red Cedar Shingles which went into effect on April 1st:

General Rules of Manufacturing—Owing to the variations of shrinkage in the drying of timber it is provided that not less than 90 per cent. shall attain the full thickness as given when dry. The remaining 10 per cent. shall be not more than $\frac{1}{4}$ in. to the bunch less than the thickness as provided for them when dry.

Color of woods shall be no defect.

XXX—16 in.—6 butts to measure not less than 2 in. when green. Must be strictly clear, vertical grain, smoothly sawn and otherwise well manufactured. No sap or shims allowed. Random widths but no shingles allowed narrower than 3 in. When dry 22 courses to measure not less than $7\frac{1}{8}$ in.

XXXXX—16 in.—5 butts to measure not less than 2 in. green. Must be strictly clear, vertical grain, smoothly sawn and otherwise well manufactured. No sap or shims allowed. Random widths but no shingles narrower than 3 in. When dry 22 courses to measure not less than $8\frac{5}{8}$ in.

Eurekas—18 in.—5 butts to measure not less than 2 in. green. Must be strictly clear, vertical grain, smoothly sawn and otherwise well manufactured. No sap or shims allowed. Random widths but no shingles narrower than 3 in. When dry 18 courses to measure not less than 7 in.

Perfections—18 in.—5 butts to measure not less than $2\frac{1}{4}$ in. green. Must be strictly clear, vertical grain, smoothly sawn and otherwise well manufactured. No sap or shims allowed. Random widths but no shingles narrower than 3 in.

6/2—XX—6 in. or 8 in. clear butts and better. 22 courses to measure not less than $6\frac{1}{8}$ in. when dry. Random widths but no shingles narrower than 2 in. No shingles less than 14 in. long allowed.

5/2—XX—6 in. or 8 in. clear butts and better. 22 courses to measure not less than $8\frac{3}{8}$ in. when dry. Random widths but no shingles narrower than 2 in. No shingles less than 14 in. long allowed.

Eurekas—XX—6 in. or 8 in. clear butts and better, 18 courses to measure not less than $6\frac{3}{4}$ in. when dry. Random widths but no shingles narrower than 2 in. No shingles less than 16 in. long allowed.

Perfections—XX—6 in. or 8 in. clear butts and better. 18 courses to measure not less than $7\frac{3}{8}$ in. when dry. Random widths but no shingles narrower than 2 in. No shingles less than 16 in. long allowed.

Packing Rules for B. C. Shingles

1. All 16 in. random width shingles shall be packed so that 4 bundles when laid $4\frac{1}{2}$ in. to the weather will cover 100 square feet. They shall be packed 22/22 courses to the bunch, 4 bunches to the square.

2. All 18 in. random width shingles shall be packed so that 4 bundles when laid $5\frac{1}{2}$ in. to the weather will cover 100 square feet. They shall be packed 18/18 courses to the bunch, 4 bunches to the square.

3. Openings shall not average more than $1\frac{1}{2}$ in. to the course when dry.

4. All packing boxes to measure 20 in. in width. (inside measurements).

5. A variation of one inch over and one inch under allowed in length in all No. 1 grades.

6. That 5 inch (5") dimensions be packed 19/19 courses to the square, with four cross shingles at each end of each bundle.

7. That six inch (6") dimensions be packed 21/21 courses, four bundles to the square, with four cross shingles at each end of each bundle.

Shipping Weight of Shingles

The shipping weight of British Columbia shingles is:

XXX—16 in. 140 lbs per square.

XX-6/2—16 in. 140 lbs per square.

XXXXX—16 in. 160 lbs. per square.

XX-5/2—16 in. 160 lbs per square.

Eurekas—18 in. 150 lbs per square.

XX Eurekas—18 in. 150 lbs per square.

Perfections—18 in. 160 lbs per square.

XX Perfections—18 in. 160 lbs. per square.

N. B. Forest Survey Adopts Standard Method of Surveying Timber Block Lines

By G. H. Prince, Provincial Forester, Fredericton, N.B.

Mr. G. H. Prince

The Forest Survey of the Crown Lands of New Brunswick, which includes the work of surveying and retracing the timber block lines, the cruising of the timber, the determination of the rate of growth and the classification of the soil, is being continued as rapidly as possible, and already thirty per cent. of the crown lands have been examined and mapped. At the present time about thirty men are engaged on the field work on snowshoes, and this number will be increased when the summer field parties are made up early in May. The following is a brief description of the first part of work, namely, "the block lines":

Since the survey started, many developments in method have taken place, and chief among these changes may be

said to be the permanent establishment of the boundary line between timber blocks. This work is being done in advance of the timber estimating. The lines being run and quarter mile posts established and carefully marked, to be later used by the cruisers in cruising and plotting the maps and in segregating the timber estimates on each block of land. The work of surveying these lines is now carried out by forest engineers, who have also qualified as deputy land surveyors.

How Block Lines Are Run

The block lines are run east and west two and one-half miles apart, while every five, or in some cases seven and one-half miles, north and south lines are established known as tie lines. This method gives what is termed by engineers as "closed survey," but it does not completely divide the area in blocks two and one-half miles square (which is usual size of timber licenses) as it would if every north and south line were established at regular intervals of two and one-half miles; but the extra expenditure to accomplish this was not considered necessary because such lines are not actually needed for the purpose of the survey.

The instructions regarding the establishing of the block lines require that the course of the line be well brushed out and the trees well blazed so as to leave a lasting scar; that the lines be chained accurately and the chainage or the distance from the corner be placed on posts or trees every quarter mile; that especial trees or posts (known as convenience location posts) be marked plainly at points where block lines cross portages, drivable streams and lakes; that all block corners be permanently placed and located by witness trees; that all quarter mile posts and corners shall be properly marked with the block numbers facing in the direction of the block.

This work is being done so that the lines will be as useful and convenient as possible to the lumbermen, their cruisers, and scalers, as well as to the cruisers of the forest survey, the forest rangers, and government scalers. The establishing of block lines in advance of the timber estimating is a great aid to the cruising work, as this can be done much more systematically and efficiently. As rapidly as the block lines are run the notes are plotted and skeleton maps furnished the cruisers. The cruisers use this plan as a base field plan on which to plot the forest types, topography, rivers, portages and other important features. The cruiser, assisted by two men, secures this data by travelling across each 4,000 acre block eight times, using a hand compass to guide their direction and a 2 chain steel tape to control the distance. The cruise lines are usually run north and south equal distances apart and approximately parallel.

Permanency and Accuracy of Work

The permanency and accuracy of the timber block lines run in the manner described above, together with their value to the forest rangers and lumbermen, more than offsets the increased cost of this

method. Over one thousand miles of survey line have already been run or retraced, and many favorable comments have been made on the practical and immediate value of this branch of the forest survey work.

In addition to the usual plans prepared, viz., the timber type plans and soil type plans on a scale of 25 chains to an inch, an extra plan, commonly known as the "cruisers' plan, on a scale of 100 chains or 1¼ miles to an inch, is now being prepared of all that area examined to date. This plan, of which a sample is herewith submitted, is made not only for the use of rangers, scalers and members of the forest service staff, but especially for the use of timber cruisers, lumbermen, guides, sportsmen, and for any others whose business or pleasure takes them within the forest. These plans are about sixteen by twenty-four inches, each one including about 160,000 acres. Everything is made as legible as possible so as to be of use to the layman. All permanent features are included in this plan, such as all block lines, old and new, rivers, lakes, dams, lumber camps, camping sites, sporting camps, portage roads, trails, prominent hills, swamps, barrens, and recently burned land, etc.

Other Features of Present Plan

All timber blocks are numbered and the name of the license holder also given. The plan is very convenient as a reference plan for all those who wish an accurate map to carry with them in the woods. All features are plainly marked on the plans so as to make good legible blue prints which, if kept in a folder and properly looked after, should last for a considerable time. Thus with a box compass and a cruiser's plan of the country a stranger would have little difficulty in locating himself and travelling in any part of the forest.

These cruisers' plans, which were designed to be of most use to the men in the woods, have met with general approval and the demand for them is rapidly growing. A small fee per square mile is charged for copies of this plan.

A copy of the instructions adopted for the running of block lines is given below for the purpose of showing the standard method of marking block corners and quarter mile posts.

Standard Field Instructions for Surveying of Timber Block Lines in New Brunswick for the Forest Survey Lines

All lines to be run by staff or tripod compass with at least a 4 or 5 inch needle. Compass must be kept in good working order and in proper adjustment. The compass shall be checked by the inspector.

All lines shall be well cut out, all underbrush and fallen trees obstructing the line shall be cut through, and material obstructing the line pushed aside.

Blazing

Blazing must be thorough, well cut into the wood, and at least 4 feet from the ground. Every live tree of 4 inches diameter and upwards two feet to either side of the line must be blazed. Centre trees fore and aft with three hacks up, and side trees on the line side, and adjoining quarters. Care must be taken not to allow head axemen to get off the line and to blaze trees unnecessarily too far from the actual line. In thickets blazing shall not extend beyond the trees that stand on the edge of the line. Where lines cross burned over land, treeless barrens, meadows, lakes, streams, portage roads and main hauling roads, all trees on edges of such openings must be well blazed and the trees cleared of overhanging branches that would obstruct the view of the blazed trunks. In case of clear burns, open barrens, or meadows, where there are no trees to mark, stakes shall be blazed, hacked up and placed in the line at least every ten chains. These stakes shall be of softwood at least two inches in diameter and stand at least 6 feet above ground. In thick brush, such as a reproducing burn, the line must be well cut out, the same as a transit line. Subject to the approval of the inspector.

Old lines being re-run shall be thoroughly re-blazed, the new blazes being placed above or below the old blazes, care being taken not to obliterate the evidence of the former blazing.

Chaining shall be done with a steel tape one chain in length, and with ten pins, which, if steel, shall be tagged with red cloth.

Chainmen must exercise care in chaining up or down slopes, no pins being exchanged between head and rear chainmen in this operation, except at the end of each full chain as is customary. The use of a plumb bob in breaking chain is recommended.

Should there ever be any doubt as to the number of chains in a tally or line, it must be re-chained.

At least one chainman of every chaining crew must be experienced and every chainman must be sworn and his oath filed with the Minister of Lands and Mines. Lines must be chained accurately, with no allowance for over or under chainage.

Tally Pegs

At the end of each ten chains a tally peg must be placed. This peg must be flattened on two sides and have a width of at least one inch. This peg shall be marked with the number of chains from starting point, as 10, 20, 30, 40, chs. The marks to be put on the side from which the chainage originates.

Quarter Mile Trees or Posts

At every twenty chains or one-quarter of a mile along the line a tree shall be flatted on 3 sides, one of which faces the direction from which the chainage originates, and on this one the actual chainage from point of beginning shall be marked with scribing iron, as 40.03 chs., meaning forty chains and 3 links. If line is being run north or east, the chainage numbers must be preceded by a plus, thus 40.03 chs., if the line is being run south or west the chainage numbers must be preceded by a minus, thus -40.03 chs. On the other two sides the number of the respective timber blocks must be placed, for examples, T.B. 204 on one side, and T.B. 205 on the other, or the Block and Range, as the case may be. If a healthy tree of at least 4 inches in diameter and not more than two feet off the line and not more than 30 links from the proper quarter mile point is not available, then a post flatted on 3 sides and at least 4 inches in diameter, shall be planted at the actual quarter mile point exactly on line. The post shall be marked with the actual chainage from point of beginning and timber block numbers in the same manner and position as required for a quarter mile tree.

Timber Block Corner Posts

Block corner posts shall be established at all block corners and shall be flatted on four sides and be set with diagonals east and west and north and south. Block corner posts must have a diameter of 5 inches or more. Corner posts must be marked on the four sides with the respective block numbers and ranges, if any—also the surveyor's initials and year of survey. When the corner forms at the same

time the corner of a block of granted land, the side facing the grant should be marked with a star * with the name of the grantee or number of lot granted.

Witness Trees

Two witness trees shall be established for every timber block corner. The trees shall be heavily blazed on one side only, that side exactly facing the corner post. The distance from the post to the tree must be measured and the tree marked W.T. followed by the exact distance from the tree to the post in chains, for example, W.T. 08, meaning 8 links from tree to post. The blaze shall be cut deep in the wood and shall be at least 4 feet from the ground.

Lumbermen's and Cruisers' Convenience Location Posts to be Established on Block Lines

In addition to the posts described above, a tree or post, prepared and marked in exactly the same manner as required for quarter mile trees or posts, shall be marked and planted on both edges or shores of all lakes, treeless barrens, drivable streams, and on one side of all portages or tote roads, crossed by the block lines. Such trees or posts shall be so placed as to be readily discernible by a person passing along the routes mentioned above and shall be marked with the actual chainage of the point where they are placed with the block numbers on their respective sides, in the same manner as quarter mile trees or posts are marked.

Equations of Chainage

In no case because of swollen waters or impossibility to cross shall a line be finished or left on edge of a stream, lake or barren. The chainage must be carried across if necessary by triangulation, and the method of triangulation fully recorded in the notes and equations of chainage placed on both shore posts and recorded in notes. Where for any reason a line is run partly from both ends of the line, the equations of chainage must be placed on the post where they meet and also recorded in the notes.

Manner of Preparing and Marking Posts

All markings on posts and trees shall be carefully and plainly made with scribing iron so as to be easily read. All markings shall read from the top of post downwards. All posts must be of cedar, tamarack, ash, pine, or spruce, in order named, according to availability, and be planted firmly at least one foot in the ground and extend 4 feet above the ground and shall have the top slanted so as to shed water. If in a rocky country all posts must be piled about with rocks.

Observation on the north star, to determine the declination and

variation of the magnetic needle, must be made on all north and south lines that are run 60 chs. apart more or less and at intervals of 15 miles or less along these lines.

Old Lines and Posts

All old lines observed must be located and bearings taken and recorded in the notes and plan.

All old posts observed shall be located and recorded in the same manner.

Timber Types

The boundaries between the following timber types will be recorded and shown on the plans.

1. Softwood lands.—a. Old Growth 1. Clear Spruce Stands. 2. Spruce and fir. 3. Cedar bottoms. b. 2nd growth. 1. Clear spruce. 2. Spruce and fir. 3. Dense spruce or jack pine under 6 inches in diameter, the result of fire.
2. Mixed hard and softwood lands.—a. Old growth. b. Second growth.
3. Clear hardwood lands.—a. Old growth. b. Second growth.
4. Treeless barrens.—Land treeless because of soil conditions and not because of fire.
5. Tree swamp.—Wet land on which trees grow but will not reach commercial size because of soil conditions.
6. Alder swamps.
7. Burn non-reproducing.—Burnt over land on which there is not sufficient reproduction to ensure a future crop.
8. Burn reproducing.—Burnt over land on which there is sufficient reproduction to ensure a future crop.
9. Wild Meadow land.
10. Cultivated land.

The direction of slopes shall be marked in the notes and degree indicated.

All brooks and streams must be shown in the notes, showing by arrows direction of flow and giving width and depth in feet and approximate speed, as slow, medium, fast.

The above data included on the field notes must be shown on the prepared plan submitted to the office. Instructions regarding the preparation of the land surveyors' plans are supplied each chief of party, a uniform legend being used for all plans.

Has Great Respect for Oak Flooring

Writing the "Canada Lumberman" a gentleman who recently became Chairman of a Housing Commission in an Eastern city takes a semi-humorous view of the whole forest products situation. He acknowledges that he is not buying any lumber for himself and that perhaps lookers-on see most of the game. Says he, "I barely recognize a piece of wood nowadays as I am not wealthy enough to claim such an intimate acquaintance. Lumber is almost as distant a friend as sugar, coal and a few other articles that once were old pals. Like the newly-rich, they speed by in a high-handed fashion and forget their former associates and familiar environs of other days. Oh, this is a cold, cruel, sordid world.

"I have great respect for a piece of board nowadays; in fact, it is with feelings of intense reverence that I approach it. A 2 x 4 scantling is something to be handed down as a family heirloom. Some people in this good city are placing in the family archives strips of oak flooring to show future generations the priceless possessions of a past age. Truly these specimens will be as letters of gold in pictures of silver.

"Yes, we need some houses in this town, and if the government won't allow us the money, we will purloin some and waste it. That is what public money is for, anyway. If you don't believe it, ask some politician. He will bear out exactly what I say if he is honest, straightforward and above suspicion."

Would Give Access to New Timber

In the Ontario Legislature recently, R. R. Hall, M.P.P., of Parry Sound, introduced a motion favoring the extension of the Temiskaming and Northern Ontario railway from North Bay to Parry Sound. He said from the economic standpoint alone the venture would be justified. If the railways were brought down to Georgian Bay somewhere near Parry Sound it would benefit not only the Province of Ontario, but the whole of the Dominion of Canada. In that district, locked in for want of railroad transportation, he said, were enormous supplies of oak, maple, basswood, birch and cedar. Railway accommodation, such as he suggested, would give access to nearly ten hundred million feet of timber.

"Think of it, gentlemen," he declared, "there are men and women forty years of age in our Province of Ontario who have never seen a railway. This railway is a 'dead horse' at the present time, and if the Government supports this motion and we get this road

built the Government will practically have worked a miracle. It will have put life into a 'dead horse'."

The McGibbon Mill Ready By June

The new sawmill of the McGibbon Lumber Co., Limited, of Penetanguishene, which will replace the one burned down last fall, will be ready to operate by June 1st. The company have a large gang of men rushing the work along. The dimensions of the mill are 30 x 150 ft., with lath mill wing, 40 x 30 ft., and sorting shed, 30 x 125 ft. The mill is on cement foundations, while the foundations for the engines and boilers are of cement. The McGibbon Co. are putting in a double cut, 13 inch band saw and band upright resaw with return feed. The motive equipment will consist of three, 500 h.p. boilers, and an engine of 450 h.p. Dutch ovens are being installed and the plant, when completed, will be modern and complete in every respect.

Will Retain Their Power Rights

It is understood that the International Paper Co. have determined to spend \$100,000 this year in the power development at Grand Falls to comply with provisions of the Act of the New Brunswick legislature and thus retain their rights for they have already posted \$60,000 with the provincial government. While it is declared that the International Paper Co. are prepared to comply with the conditions necessary for the retention of their rights, it is said that there is little likelihood of the complete development plant being carried out at the present time owing to excessive costs. It is asserted that engineers have advised that no less than nine millions of dollars would be required to carry out the same development plant which a few years ago would not have entailed an outlay of more than three million dollars. The International Paper Co. are said to have taken over the interests of the Van Horne estate in the Grand Falls Power and the transfer of the Van Horne block of one hundred square miles to the Dalhousie Lumber Co., a subsidiary of the International Paper Co. is reported to be part of the transaction.

What Do You Think?

(The American Lumberman)

Do you believe that wages will come down?

Do you believe that railroad rates will increase?

Is it not a fact that your community is short of houses and is it not a fact that all the reports you get from other towns and cities that you know anything about say that these places, too, are short of houses?

Is it not a fact that homes are the most essential thing to our comfort, welfare and happiness?

Do you know of any better work that you could do for your community than to help supply the needs for better homes?

Is there any other business you would rather engage in than that of helping to build homes?

Is not the lumberman the home builder to the nation?

These things being true should you not continually plan how home building may be carried forward, and in doing so will you not deliver a service of the highest character to the community in which you live?

How many real estate owners in your community have vacant lots?

Why not go to these owners of vacant lots and tell them that you will assist in having a house built on each lot, the cost of which can be covered by a first mortgage on the property and a second mortgage which can be taken care of while it is being paid off on the monthly instalment plan?

In other words, why not turn the vacant lots into income producers?

We read about building beautiful womanhood and splendid manhood—beautiful homes would help in this, would they not?

Are you helping the women of your community build better homes?

Does a home owner believe in destroying property?

Do you know that \$2,000,000,000 was spent in saloons last year?

Why should not money that formerly passed through the door of the saloon now go into the door of the home?

Will opportunity ever knock louder at your door than to-day?

Will it have to knock in the door?

Restoring the Status of Canadian Currency

Canada Must Speed Up Production, Develop Her Great National Resources, Export More and Import Less to Correct the Present Exchange Situation

By D. A. Cameron, Manager Bank of Commerce, Toronto.

Foreign trade as conducted between civilized nations to-day is after all only an improved system of barter. Instead of exchanging one or more articles for one or more other articles as was the custom in bygone days, and is now in some outlying districts, we carry on trade by mediums of exchange, that is, by the use of various credit instruments, the most common of which are Bank Credits of various kinds and Bills of Exchange with shipping documents attached, in fact it may very properly be said, that every foreign trade transaction, unless purely barter, is represented by a credit instrument in some form.

When such documents have been washed—that is, set off against each other—and this to all intents and purposes is done daily—the balance due to or by a country is determined.

For many years prior to the war these balances were settled by shipments of gold, or sale of securities which simply postponed the debt. As this was done at a comparatively small cost, the question of foreign exchange gave us little or no concern, because the moment the premium on the funds of a creditor nation reached a point where it paid to ship gold—between here and New York the cost was 75c per \$1,000—the gold was exported and the debt cancelled. As a matter of fact transactions were not always cleared in the direct manner I have just described. Frequently they were settled by a three-cornered transaction or possibly even further extended. For example, Canada might buy cotton from the United States on the one hand, and sell wheat or meat to Great Britain on the other, which latter country might direct the Argentine to cover its debt to Canada, either by the shipment of goods and or the shipment of gold to New York. Canada would thus be placed in funds with which to extinguish its debt to the United States. The war has changed all this however. Because of the inflation of the currency of practically all the civilized countries of the world, the shipment of gold was prohibited by their respective governments. The country, therefore, which imported more goods than it exported, created an adverse balance which could not be settled as in the past by the shipment of gold, hence the citizens of such debtor country having obligations to meet in a creditor country, were forced by the competition for funds available in such country, to pay a premium therefor—the premium being governed by the supply and demand.

This is the situation which at present exists between Canada and the United States—Canada the debtor nation and United States the creditor.

According to the best information obtainable at the moment, we exported last year goods to the value of approximately \$300,000,000 more than we imported. Against this, however, we had large payments to meet for interest on our obligations held abroad, and for shipping charges, insurance premiums, etc., all of which payments have the same effect on the exchange situation as the importation of goods.

Canada's Adverse Trade Balance

It is estimated that \$1,200,000,000 Canadian securities are held in the United States, the interest charge on which is placed at \$65,000,000, and about \$2,700,000,000 securities are held in Great Britain, the interest charge on which is approximately \$125,000,000, or a total annual interest charge of say \$190,000,000. To this large sum must be added our payments for shipping charges and insurance premiums, estimated for the past year at \$60,000,000. Another feature not to be lost sight of, is our exports to Europe during the year for which we have not yet been paid. This as closely as I can gather amounted to a further \$60,000,000 or a total of say \$310,000,000 against the \$300,000,000 excess exports—a net debit balance for the year of \$10,000,000. To this must be added a further large sum for repatriated securities, if I may use the term. You will doubtless have learned through the newspapers or otherwise, of the recent action of the Minister of Finance in requesting bond dealers and brokers to discontinue the importation of Canadian securities from Europe, which in most cases were comfortably domiciled there for years to come, but which on account of the favorable rate of exchange, insofar as Canada is concerned, were being purchased and brought over here in large amounts, with the result that our cash resources, so necessary for the carrying on of the commerce of the country, were being rapidly depleted.

The amount of the securities so purchased and obligations liquidated are estimated roughly at \$100,000,000, a considerable propor-

tion of which were afterwards sold in the United States, but insofar as we can learn \$2,550,000,000 have been retained in Canada, or went to reduce the debenture indebtedness of certain investment institutions doing business in Canada.

You will, therefore, see that our real position for the year, insofar as foreign trade is concerned, was an adverse balance of between \$30/50,000,000, and this accounts for the present discount on the Canadian dollar in the United States.

I do not claim that the figures which I have just quoted are accurate. While care has been exercised in compiling them they are, after all, only estimates, as apparently it is not possible to obtain accurate figures. Of one thing we may feel quite certain, however, our imports including our payment for interest, freight and insurance charges, re-purchase of securities, etc., exceeded our exports both visible and invisible, because the discount on the Canadian dollar is a sure indication of such fact. Just as accurate as the thermometer in indicating the temperature. The situation is not at all dissimilar to a customer conducting an account with his bank. If he has a credit balance, the books of the bank will show it; if he has overdrawn his account, that condition will be exhibited in the books. A creditor nation will have balances at its credit in foreign countries on which it can draw. A debtor nation will have an overdrawn account, or will have outstanding obligations to meet without the necessary funds at credit to enable it to do so.

With the exception of Holland, Switzerland and Spain, all of which countries made large profits out of the war, the Canadian dollar is, and for some time past, has been at a premium in all the countries of Europe, largely for the reason that their adverse balances are greater than ours.

How Trade Influences Exchange

Of all the great countries in the world, the United States at the moment is "top dog" insofar as the value of its dollar is concerned. This was not always so, however. For fourteen years after the conclusion of the war between the North and the South, the United States dollar was at a discount, dropping during the war as low as 40c, and all of you will doubtless remember that immediately war was declared between Great Britain and Germany, the British pound went to a considerable premium in United States. For a time it remained in the neighborhood of \$5.00 to the pound. The reason of this was the withdrawal of large sums of money by Great Britain which she had at her credit in that country. This situation changed very rapidly, however, because of the necessity of the purchase by Great Britain of large quantities of foodstuffs, munitions and other materials necessary for the prosecution of the war.

There is another country where the United States dollar, in common with the currency of most other countries is at present, or in any event a short time ago was, a discount, namely Uruguay in South America. Uruguay exports nearly 2½ times more than she imports, the figures for the year 1917—the last available—show:

Exports,	\$96,000,000
Imports,	38,000,000

which accounts for her currency being at a premium practically the world over.

In this connection I had a very interesting experience upon the occasion of the visit of Sir John Aird and myself to Uruguay two years ago. When at Montevideo we called upon our agents, the London and Brazilian Bank Limited, and as we were running short of funds, I cashed a gold draft on New York for \$500 under my letter of credit. You may readily appreciate my astonishment on being handed \$390 Uruguain dollars therefor, or a discount of 22%. Mr. H. J. Fuller, president of the Canadian Fairbanks-Morse Company, who visited Uruguay last year also reports a similar experience.

The case of Uruguay is perhaps as good an example as I can give you of the fact, that when a country's exports exceed her imports, her currency will be at a premium in other countries.

In this regard it is questionable if it is a real advantage to a country to have exports largely in excess of its imports. The ideal situation is to have them balance as nearly as possible. It is obvious that purchasing countries will buy—all other things being equal—where their currency will secure the largest quantity of goods. Take the case of Uruguay as an example, one of her chief, if not her chief export, is meat products. The same may be said of Argentina a few

miles away. Assuming that the currency of a purchasing country is at a par in Argentine, and at a considerable discount in Uruguay, the purchasing country would naturally prefer dealing with Argentine, unless it could secure its meat products sufficiently cheaper in Uruguay to offset the discount in her currency. In other words, to compete with Argentine, the seller of meat products in Uruguay would have to sell cheaper than the merchant in Argentine, the difference being the discount on the funds of the purchasing country. Let us look at the situation from the conditions which at present obtain in the United States and Canada. Assuming that a European country desires to purchase wheat, and has the money to pay therefor, the farmer in Canada should receive on the basis of today's rate, 11% more for his wheat than a farmer in the United States. If the price were \$2.00 per bushel in the United States, the farmer in Canada would receive \$2.20 per bushel. It would therefore seem, if the United States is to hold her foreign trade, that she will have to be prepared to extend, possibly for long terms, credit to purchasing countries in Europe.

Greater Production is Only Remedy

I do not wish to be understood as adversely criticizing the brokers, bond-dealers and investment institutions who imported Canadian securities or liquidated their long dated obligations, as in the absence of a mandate from those in authority, their action would not seem open to question, in fact it would generally be regarded an act of wisdom on the part of a company to liquidate its outstanding obligations provided it had the funds available, and particularly if it could save money by doing so. In some cases I understand a profit was made on such transactions equal to three or four years' interest on the securities taken up. From a national standpoint such transactions presented quite a different aspect, however, as they placed an added burden on Canada's shoulders, besides incidentally forcing those who had to import coal, cotton, iron and other raw materials necessary for our industries, to pay a considerable premium to obtain the American funds with which to liquidate such purchases. The merchants and others who imported luxuries—no matter from whence they came—would seem more open to censure, as everything imported which does not serve some useful purpose, acts as a further aggravation of our foreign exchange situation. There is only one cure, viz: to import as little as possible, only what is absolutely necessary, and to produce and export as much as possible.

Borrowing Only Temporary Expedient

The situation could of course be temporarily tided over by borrowing outside of Canada, as such action would immediately furnish us with New York funds, and if the amount were large enough the Canadian dollar would at once rise to par. But this at best would only be a temporary expedient, and if before the maturity of such loans, we did not speed up production and exports, or curtail imports or preferably both, the result would be a still higher premium for New York funds than at present exists.

I would like to explain why borrowing outside of Canada would furnish us with New York funds, as this is a point not apparently well understood. I think it is generally admitted that the centre in which any commodity is traded in to a greater extent than elsewhere, determine its price; for example, Liverpool in Europe, and Chicago in America fix the price of wheat—while London in Europe, and New York in America, fix the price of exchange. This being the case every transaction of a monetary nature which we have with a foreign nation, with Great Britain, or with the Overseas Dominions, is based on the price of exchange fixed in New York, and in the last analyses is settled for through New York. In fact New York may very properly be designated as the Clearing House of North America. You are doubtless familiar with the services performed by the Clearing Houses throughout Canada, and appreciate their usefulness in facilitating the daily settlement of our commercial transaction of a domestic nature. The cheques and other instruments of credit gathered by the banks each day, are cleared through it next morning, the procedure being that each bank puts up in separate parcels its cheques on, and notes of other banks, and presents same each day at a certain hour at the Clearing House, where it in return received the parcels of all the other banks containing cheques drawn on it, together with its own notes. The Clearing House Manager determines the balance due to or by each bank, when the debtor banks must settle their balances by the deposit of gold or its equivalent. In this country we settle with legal tender notes issued by the government solely for that purpose, because these notes, which ordinarily are redeemable by the government in gold, are found more convenient to use than the gold coin. New York through its banks performs a very similar service in respect of the foreign trade of North America.

In view of what I said a short time ago, some of you may ask why it was that prior to the war, when for years our imports exceeded our exports, New York funds hovered in the neighborhood of par. This is readily explained. At that time large construction

works were being undertaken in Canada by the Dominion government, by the provincial governments, by the railway companies, by municipalities, and by private companies. To furnish the funds for such undertakings we borrowed huge sums in Europe, principally in Great Britain, which was then, and which we hope before long will again become, the principal creditor nation of the world. The proceeds of these loans as already explained had the same effect insofar as we are concerned, as the export of goods of a like value, and furnished us with the N. Y. funds with which to pay for our imports.

As previously intimated some of these obligations have been retired within the past year, because of the favorable exchange rate, but because we did not export sufficient to meet them, together with the cost of our imports of goods, interest, shipping and insurance charges, an adverse balance was created for the year, with the result that the Canadian dollar, as I have already explained, is at a discount in the United States. It will likely be a long time before we can expect to again borrow advantageously in Great Britain, partially on account of the high interest rate—as compared with the rates which prevailed before the war—but more particularly on account of the adverse exchange rate which now prevails, and which will likely continue for some years to come, between Great Britain and the United States.

Shipping Under British Flag Grows

Prior to the war Great Britain was the principal creditor nation as she was the banking centre of the world. This was due to her immense foreign trade, and her large earnings from shipping, insurance and banking. As a consequence the British pound was at a premium in most countries in the world.

The tremendous expenses incident to the war absorbed a great deal of her savings however, which, coupled with her loss in man power and the attitude recently assumed by her workmen, have temporarily resulted in her becoming a debtor nation, as evidenced by the present price of the pound in New York, viz. \$3.75.

It is estimated that the excess of her imports of goods over exports of a like nature last year was £700,000,000. From this must be deducted her invisible exports, the value of which cannot be accurately ascertained, but in a recent statement the chairman of one of the large shipping companies in Great Britain placed her earnings for the year from shipping alone at £350,000,000 to £400,000,000. In addition large sums were earned by way of insurance premiums, to which must be added interest on her investments abroad. Including all these items however it is not expected that her exports will balance her imports for some time to come, possibly for some years. In this respect it is well to remember that last year her imports were greatly increased by the necessity of re-establishing stocks of industrial raw materials, which were depleted during the war.

If British workmen would only buckle to and work as they should, it would not be many years before her pound would again be at par in the United States. In this connection it is somewhat unsatisfactory to note, that while there are now more wage earners in Great Britain than in the year immediately preceding the war, the production of manufactured goods is far below normal. It would appear from this that restrictions are being placed on the output of labor. Against this it is interesting to note the recent statement of one of the chiefs of the Ministry, "that the amount of shipping under the British flag is 5% more at present than it was in 1914."

Live and Help Live

In closing it seems to me that we have every reason to congratulate ourselves on our satisfactory position in regard to the matter under discussion, as compared with all other countries, (with the exception of United States) which took part in the war. If we can only bring about a better understanding between labor and capital, it will, I think, be only a few years before our dollar will be on a parity with that of the United States. It therefore behooves every man in Canada, particularly the business community and the workmen who produce the goods, to put forth every effort to arrive at a better understanding of each other, and of the situation generally, and to do everything possible to stimulate production and promote exports on the one hand, and to encourage thrift and economy on the other. If we do this we shall be surprised at the quick recovery we shall make, otherwise we shall doubtless have to continue paying a premium for New York funds for some time to come.

In an address by Mr. Sissons, of New York, which I lately read, I was very much impressed with his adaptation to present conditions of the old adage, "Live and let live" which was "Live and help live." What better peace slogan could we in Canada adopt than "Live and help live, produce, export and economize?" If adopted and lived up to by Canadians as a whole, the adverse exchange situation which at present exists between Canada and the United States would soon become a thing of the past.

Canadian Exporters Look For Full Payment

On Timber Shipments Made to Old Country on Basis of Canadian Currency— Negotiations Still Pending on Serious Question of Finance

"Under wise leadership and good government, the people of the United Kingdom are rapidly recovering from the after-effects of the war, and are beginning to export more than they import. The country is once more taking her place in the great shipping world, and the people are gradually settling down, and are dealing with their many complex problems with a determination and fixity of purpose that augurs well for the days to come.

"The Government seems to be in very close contact with the great masses of people, who are truly enjoying a higher measure of liberty than any other people. This is demonstrated in many ways, and while expression of dissatisfaction, unrest and agitation may manifest itself in various directions, still the very fact that this can be done freely, demonstrates the true freedom which the populace enjoys. The outlook for the future is bright."

This is the opinion of Mr. A. E. Gordon, of Terry & Gordon, Limited, Toronto and Vancouver, who recently returned from a two months' business and pleasure trip to the Old Country. Mr. Gordon added that in his opinion, so far as the supply of lumber is concerned in the British Isles, they do not seem to be suffering from depleted stocks to the same extent as we here in Canada. There are various reasons for this, some of the principal ones being that the use of timber is being confined principally to the manufacturing industry, shipbuilding and general repairs. The active house-building campaign, regarding which so much has been heard, is not yet fully under way, owing to several causes. One is a Government regulation that prohibits rents being increased materially from the 1914 basis. This is causing builders to hesitate in proceeding with new house building at the present high prices of material and labor.

Some Deterrents to Building Activity

Another cause is the action of the labor unions in the building trade, who insist that new apprentices to the building trades shall not be at a greater rate than their ranks are depleted. This, at a time when the call for help of all kinds is insistent and the demand greater than at any previous period, seems to be unreasonable, and until the labor unions become a little more broad-minded in their attitude, and the Government allows landlords to collect rents in proportion to the augmented cost of construction, the house building requirements may not be met as speedily as has been anticipated.

There is a strong feeling, according to Mr. Gordon, among British importers against paying abnormal prices for lumber. At the present time the trade is not suffering seriously, on account of the large quantity of lumber remaining in Eastern Canada, previously owned by the British Government, and which has recently been turned over to a syndicate of large importers. The shipping of this lumber has now commenced, and should keep the British market reasonably well supplied for some months, at least in their ordinary requirements.

In Mr. Gordon's opinion, one of the principal causes of the high cost of living in the British Isles is caused by the Dockers' Union, the members of which work eight hours per day, which in many cases amounts only to seven, and object to allowing any of their members to work overtime, and to work more than one shift per day. This high-handed action of the Dockers' Union is being severely criticized, and is doing more perhaps than anything else to hold up freight rates, owing to the fact that many vessels have to wait from several days to several weeks before securing berths so that their cargoes can be unloaded. The result of this, the shipping companies claim, is that their vessels often lose one trip out of every four so far as trans-Atlantic trade is concerned, and one trip out of every three from Scandinavian ports.

Why Cargoes are Delayed in Unloading

During the past Winter, vessels plying between Scandinavian ports were returning light rather than load with timber, with the prospect of submitting to several weeks' unnecessary delay in discharging their cargoes at British ports. This, notwithstanding the fact that there is a large quantity of timber lying at Scandinavian ports, sold to British importers, still awaiting delivery. Shipping companies also claim that for the above reasons they are not making undue profits. If they could obtain labor, working three shifts

per day of eight hours each, in discharging their vessels at British ports, the situation would soon be relieved, and the shipping companies could afford to reduce their freight rates, and to this extent, bring down the cost of living in the British Isles where the incoming rates of freight enter so largely into the total cost of every commodity imported.

There is at present a serious difference existing between the British Government and many Canadian exporters of timber, backed by the Dominion Government, in connection with the payment for timber which was bought in Canada during 1919 by the British Government Timber Buyer on credits provided by the Canadian Government for that purpose. In most cases the Timber Buyer insisted upon having a clause inserted in each contract, whereby he had the option of paying in pounds, or in dollars in Montreal at the rate of exchange ruling upon the day of payment, and to a number of exporters the statement was made that all contracts were carrying the same clause.

It has now been ascertained that there were at least three different clauses covering terms of payment agreed to by the Timber Buyer. In some he guaranteed the rate of exchange; in others no mention was made of the exchange question.

Canadian Exporters Want Settlement at Par

When these contracts were entered into between Canadian exporters and the Timber Buyer, the British Government had not yet withdrawn its support from the exchange market, and had given no intimation that it intended doing so, and as the difference in exchange between British pounds and Canadian dollars had never been a serious factor, Canadian exporters as a rule did not add a prospective loss on the exchange, in making up their selling prices to the Timber Buyer.

Shortly after the Timber Buyer had concluded his contracts with Canadian exporters, the British Government withdrew its support from the exchange market, the result being that pounds depreciated rapidly, greatly to the detriment of Canadian exporters. On account of the Timber Buyer exercising his right to use his Canadian credit to pay Canadian exporters, it is felt that he should have paid for these goods at the rate of 100 cents on the dollar, instead of about 80 cents on the dollar as was paid in several instances. If payments had been made from London instead of from Ottawa, the question would have assumed a different aspect, but Canadian exporters feel that under these circumstances they have been unjustly dealt with.

Mr. Gordon states that the whole question is now before the Canadian High Commissioner, Sir George Perley, and Mr. W. C. Noxon, Chairman of the Canadian Mission in London, both acting for the Canadian Government at the one end, and the British Treasury and British Board of Trade, on the other hand. The result of these negotiations has not yet been announced, but Canadian exporters are hopeful that the fairmindedness of the British Government will prevail, and that Canadian exporters may be paid for their lumber upon the basis they have the right to expect. The total amount involved is a very large one—something like \$750,000. The question is one of the most serious that has ever arisen between the Mother Country and Canada in the way of finance.

Why Not Five Days of Ten Hours Each?

"We have an eight hour day to deal with, which means forty eight hours labor per week. My suggestion is that five 10 hour days should constitute a week's labor. This will give the men in the mill and yards from Friday 6 p.m. until Monday 7 a.m. and will, we think, be even better than working six 8 hour days. Men must get up and two hours per day is of little use to them while the whole of Saturday would be of advantage not alone to the employees, but of reduced running costs and allow repair work to be done. We believe that this plan will produce more contentment and it certainly will not reduce the cut as much as 48 hours spread over six days, for it is the starting and stopping that loses time," remarked a leading Western Ontario saw mill operator this week. "I would like to learn what other manufacturers think of the suggestion," he concluded.

Stumpage Dues Is Big Question

When the Provincial Government looks to the stumpage payments on logs cut on New Brunswick Crown Lands for one-half of the total revenue of the province, as the estimates presented in the Legislature recently indicate, it is not surprising that New Brunswick folk take a deep interest in matters relating to Crown lands. The prosperity of the Province depends to a great extent on the lumbering industry, its traditions are intertwined with the history of the country—and on occasions it has dominated the politics of the governments of those times.

As a result of increased rates and larger collections, with further increases to be made, the revenues from this source has become a more important feature than ever before in the finances of the Province. The estimate of \$1,200,000 revenue from this source for 1920 presents a figure double the sum received last year and more than three times the total of any three preceding years.

In his annual report the Minister of Lands and Mines, Hon. E. A. Smith, remarks that, "This increase will be partly due to the higher rate of stumpage and partly to the improved methods in obtaining an honest return of the lumber cut."

While the prospect of the much to be desired increase in revenue is gratifying it does not satisfy every one; the leader of the Provincial Opposition is one of these and he does not hesitate to say so. His argument in the matter is that the present rate of \$3.50 per thousand for lumber cut on Crown lands is ridiculously low, in comparison with rates of from \$6 to \$12 secured by some owners of private lands. In accordance with his conviction he moved that the rate be increased to \$7, which, with the mileage tax, the bonus, and fire protection paid by lessees of Crown lands would make their total payments per thousand considerably higher.

Two of his supporters opposed his amendment, on the grounds that a flat rate would be inequitable and that the proper way to fix the rate was in proportion to the value of the timber and its accessibility. One of these members explained that he held Crown lands which he could not operate because the stumpage rate was too high and that on operations of private lands last winter on which he lost money he could only have met expenses if the rate had been about \$3. Action was postponed until nearer the beginning of next season, when the Government will increase the rates as conditions then warrant.

The lumbermen were not silent on the issue. The annual meeting of the New Brunswick Lumbermen's Association was in progress when this debate was going on and the president of the association, W. B. Snowball, of Chatham, took advantage of the occasion to point out that: "While there is practically a hundred per cent. advance in the articles that enter into cost, lumber has not advanced in the same proportion." He declared that such an increase in stumpage would "ruin the lumber trade in our part of the Province, reduce the cut very materially, throwing men out of employment in the woods and mills and bringing disaster to our district (the north shore)."

The proposed increase in stumpage rates was rejected by a vote of 24 to 14 in the Legislature.

Cuba Wants Canadian Spruce and Pine

Madera de pino sin cepillar (undressed pine lumber) is an item in the free list of the Cuban customs tariff which should be of great interest to Canadian lumber exporters. The item means that white pine, yellow pine and spruce, sawn and unplanned in ordinary sizes, enters Cuba free of duty, says H. A. Chisholm, Canadian Trade Commissioner of Havana, Cuba.

Many dealers even in Cuba are under the mistaken impression that a duty is levied on all lumber entering the country. This is due to the fact that harbour dues are collected on all lumber imported.

A tariff is levied, however, on hemlock. This amounts to \$1 per 1,000 kilogrammes for rough hemlock and \$2.60 per 1,000 for dressed hemlock. For this reason comparatively little hemlock is imported into Cuba. Representations are being made to the Cuban Government, however, to have hemlock classed as madero de pino and thus enter Cuba free of duty.

Detailed statistics on the quantities of the different kinds of lumber imported are, unfortunately, not available.

I am informed, however, by one of the foremost lumber importers on the island, that importations of Canadian lumber last year were not more than 4,000,000 feet of spruce and 2,500,000 feet of white pine. Practically all the yellow pine comes from the United States; 123,000,000 feet in 1915. Spruce is utilized largely for packing boxes, and white pine for such purposes as doors and windows. Were supplies available, Cuban importers could take many times these quantities of Canadian spruce and white pine. Douglas fir is practically unknown, although importers assured me they would gladly accept a trial shipment, and that in the scarcity of other lum-

bers a good market might be developed for British Columbia fir.

Canadian exporters must bear in mind that they cannot expect cash against presentation of documents. Nearly all the lumber business is done on a sixty-day basis. Two or three Canadian lumber dealers have been doing a very satisfactory business with Cuban firms on this basis. Canadian banks have been established in Cuba for many years and would be glad to furnish Canadian exporters to this country with all the credit information required. I am assured by experienced Canadian bankers here that so long as Canadians sell to reputable importers favorably known by the banks they are as safe as if they were dealing with reliable business men in their own home towns in Canada, and from whom they would not think of demanding cash.

Vessels of the Canadian Government Merchant Marine now come to Havana at least twice a month, and shipping rates from Canadian ports have been equalized with rates from American ports. There is now therefore no reason why all Canadian lumber imported to Cuba should not come direct from Canadian lumber dealers, rather than through the medium of American houses.

The North Wishes Power For Industries

After an interview with Sir Adam Beck in Toronto the Northern Ontario delegation returned home with a promise from Sir Adam that the French River power project, which is to supply the towns and districts of Sudbury, Sturgeon Falls, Callander and North Bay with power, would be commenced at an early date.

Mayor Ferguson, of North Bay, announced, following the meeting with Sir Adam Beck, that the Hydro Chairman had promised that the larger French River scheme would be undertaken. Sir Adam also declared himself in favor of this project in preference to the smaller South River and Sturgeon River schemes. On their part, the delegation promised that the towns would guarantee the Hydro to the fullest extent for money spent on the scheme.

H. Marceau, M.P.P. of Timiskaming; Z. Mageau, M.P.P., Sturgeon Falls; Charles McRae, Sudbury; Mayor Farquharson, Sault Ste. Marie; Mayor James Lillie, Sturgeon Falls; Reeve Langford, Callander; the Mayor of Powassan; James Smith, Callander; John Henry, President of the Union of Northern Ontario Municipalities; ex-Mayor Morrison of Sudbury, and a number of others formed the delegation.

Mr. Henry stated the case for the Northern municipalities to Sir Adam Beck and pointed out the large industries which would be served by the scheme. The Spanish River Pulp & Paper Company, British-American Nickel Company, Moose Mountain Iron Mines, and the towns of Sudbury, Sturgeon Falls, Powassan, Callander and North Bay were guaranteed as users of the power to be produced. In addition the North Country delegation wanted the completion of the three locks of the Spanish River. Sir Adam was given facts and figures to back up the request of the municipalities. He declared himself quite satisfied of the need for the French River power development, according to members of the delegation.

Abitibi Company Reorganizes Staff

The engineering department of the Abitibi Power and Paper Co., of Iroquois Falls, Ont., has been reorganized due to the great amount of construction at this point. J. T. Jaeger has been relieved of some routine duties and will devote his attention to larger and more important matters. The other departments, construction, mechanical and drafting, will come under his supervision. Russell Bridge has been appointed superintendent of construction and H. A. Buncke is in charge of the mechanical department, while a new chief draftsman will shortly be appointed.

Car Shortage and Newsprint Scarcity

The scarcity of newsprint is becoming more pronounced and, unless more rigid measures of economy are taken this product will not only be much higher within the next few months, but some publishers may not be able to obtain a supply at all. In a recent address in Montreal, a leading New York newspaper proprietor pointed out that one thing, which is crippling the industry at the present time, is the scarcity of railway cars. The demand has been more keenly felt owing to the fact that there is a shortage of three to four thousand cars that can not be made good, due to the lack of construction of this number, during the years of the war.

International Company Elect Officers

At the annual meeting of the shareholders of the International Land & Lumber Co., Ltd., Ottawa, the following board was elected: President, Roland Hughes; vice-president, R. H. Simmonds; managing director, S. A. Huntington; secretary-treasurer, J. B. Compton; directors, A. B. Hunt and C. W. Bates. The head office of the company is now at 304 Sparks Street, Ottawa.

Eastern Lumbermen Discuss Many Matters

Consideration Given to the Federation of Labor Suggestions—Greater Attention will be Devoted to Forestry—Other Live Questions Under Review

Messrs. McLean and Fraser moved that the new Executive appointed at this meeting give careful consideration at an early date to forestry matters along the lines suggested by Dr. Jones, Chancellor of the University of New Brunswick, in regard to the scope of the Forestry Department.

On motion of Mr. McLean, seconded by Mr. Brankley, it was unanimously resolved that the Federal Government be requested not to take any action that would interfere with trade, and with this end in view that no restrictions be placed on the exportation of lumber and wood products.

Mr. Schrier moved, seconded by Mr. McLean, that the members of the New Brunswick Lumbermen's Association in convention assembled, desire to place on record their appreciation of the services to the lumbering industry of the province of Mr. Daniel Richards and Mr. J. B. Gregory, two members of the original Executive who have recently passed away, and desire to give expression to the great loss sustained by their death, and that the sympathy of this Association be tendered to and suitably expressed to the sorrowing families of the deceased members.

It was unanimously resolved that the Association place itself on record as opposed to the passage of legislation making it necessary or compulsory for men about to be employed on drives or in the lumber camps providing certificates of vaccination. This resolution was moved by Messrs. McLean and Brankley.

Federation of Labor Programme

During the sitting a delegation of the Manufacturers' Association came in and joined in the meeting, whereupon joint discussion took place on the Legislative programme recommended by the Federation of Labor of New Brunswick, as presented to the Executive Council of New Brunswick Government on March 12. The programme is as follows:

This suggested legislation is based on recommendations of Canada's Industrial Conference held at Ottawa, September 1919, World's Industrial Conference held at Washington, D. C., November 1919 and on Legislation already in existence in several of the other Provinces of the Dominion. The purpose of these legislative recommendations is to unify Labor Legislation as far as practicable to improve conditions of industrial workers to promote harmony and good will in the operation of industry and for the general welfare of all classes of citizens.

"Suggested Legislation"

1. Department of Labor to be created.—

The Bureau of Labor Act 1905 and Amended Acts to be repealed and legislation enacted providing for a Department of Labor with a Minister of Labor who shall be a member of the Executive Council of the Government. The Department to have the administration of

all Labor Laws with independent commissions for administration of Workmen's Compensation and Factory Acts, Mothers' Pensions, Medium Wage Act and Bureau of Labor Acts, Representative of Department and each Commission or Board to form an Industrial Commission to advise in the Administration of the Department of Labor the carrying out of Labor Legislation. This has been the development in Administration of Labor Legislation all over the Continent of North America.

2. Workmen's Compensation Act.—

Act to be amended to provide for the payment of pensions during life in total disability and death cases. To provide for full medical, hospital and skilled nursing attendance from date of accident. Increasing amount allowed for funeral expenses to one hundred dollars. Payments in cases of widow and children to be increased to thirty dollars and seven dollars and fifty cents respectively and in case of permanent partial disability, provision to be made for payments of \$2,500 and minimum of \$1,500 in case of major injuries—i.e. loss of arm, loss of leg, or total deafness of both ears.

Protection of Act to be extended to clerks, by repealing providing that in case any child under the age stipulated by the Factories Act being injured or killed that the full cost of such accident or death be made a charge against the offending employer by the Board. These Amendments are requested to unify this Act with similar Acts of the Dominion and to carry out original requests made by organized labor in this matter. We submit it is the better course to make these improvements at this time, rather than introducing annual amendments as continued changes complicate administration.

3. Factories Act.—

The Act introduced at the 1919 session of the Legislature to be passed with amendments providing for application of Act to all industries, employment age of children to be sixteen years instead of fourteen years, hour of labor to be eight instead of ten, provision to be made for eating and dressing rooms in factory, for separate toilets for male and female employees, for appointing female inspector. In case exemptions for accidents exigencies of trade, etc., hours not to be more than eleven and a half in any one day and fifty-eight and a half in any one week. Also the appointment of safety-first instructor and inspector.

4. Minimum Wage Act.—

Legislation to be enacted providing for minimum wage board composed as follows:

Two representatives of labor, one of whom shall be a woman.

Two representatives of employer, one of whom shall be a woman, and a disinterested person to be a chairman, to be appointed by the Lieutenant-Governor-in-Council. Board to be empowered by Act to

W. Garfield White, Sussex, N.B.
Member of the Executive for 1920

James Robinson, Millerton, N.B.
Member of the Executive for 1920

J. W. Brankley, Chatham, N.B.
Member of the Executive for 1920

F. C. Beattie, St. John, N.B.
Member of the Executive for 1920

make enquiry as to wages, hour of labor and conditions of employments. Findings of Board on publication in Royal Gazette to be binding under penalties on industries involved in enquiry (See Manitoba, Alberta, Saskatchewan, British Columbia and Ontario Acts).

5. Mothers' Pension Act.—

Legislation to be enacted providing for the appointment of three persons, one of whom shall be a representative of labor, to administer a fund to be used for providing support for mothers of dependent children or widows. Fund to be set aside annually and to be administered under regulation made by the Board and approved by the Lieutenant-Governor-in-Council.

6. Proportional Representation.—

A. Amend the Election Act of the Province and provide for Proportional Representation—Hare System—in order to assure the people representation according to their voting strength. It is essential for the future development of this province that all classes be represented in its government and this method is recommended as it will give representation in its true sense to the opinions of all classes through elected representatives.

B. That provisions be made for additional representation for the cities of Moncton and Saint John.

C. That arrangements be made for polling booths opening their doors prior to election day to accommodate those persons who expect to be away from electoral district on election day.

7. The Department of Health be requested to give immediate effect to regulations under Health Act, providing for licensing and examination of plumbers.

8. That the Government use its influence to offset the continued increase in the cost of living by regulating as far as possible storage of food stuffs in cold storage plants for extended periods.

9. Legislation to be enacted to prevent operation of vehicles carrying twelve or more passengers by less than two persons, also providing for at least fourteen days training for motormen and conductors.

10. That the Executive Council instruct heads of departments to have Union Label on all supplies purchased.

11. That legislation be enacted or existing legislation amended to provide for election of all public boards until this is brought about. That labor be given representation by appointment on public boards.

12. That the Provincial Fair Wage Act be amended to read Union or Prevailing Rate of Wages.

13. Free School Books.

14. Abolition of property qualification for civic, municipal and provincial elections.

15. Developments of water powers of Province by the Government.

16. Fair Rent Act, as attached copy, to be enacted.

17. That the Provincial Government take over and operate Dominion Government Employment Service and provide for abolition of Private Employment Bureaus.

18. To provide for compensation for workmen during quarantine in case of outbreak of disease.

19. To provide minimum living wage for school teachers and that school be continuously operated in every school district.

20. Amend Motor Vehicles Act to provide that all persons operating motor vehicles pass necessary examinations and obtain license.

21. That legislation be enacted providing for regulation and inspection of mines.

22. Legislation providing for eight hour day in all industries.

Fraser Companies Still Branching Out

It is understood that the Fraser Companies, Limited, of Edmundston, N. B., intend branching out much more extensively in the pulp and paper line. This organization, which is one of the most aggressive and largest in Eastern Canada, now operates eleven saw mills in New Brunswick and Quebec provinces, and a new mill erected at Campbellton, will make the twelfth one owned by them. This plant, which is now fully equipped, will have a capacity of 150,000 ft. a day. The output of the Fraser Companies in their sulphite pulp mill at Edmundston is about 100 tons daily.

Archibald Fraser, Donald Fraser and three of the managers of the firm have applied to the provincial legislature at Fredericton for the privilege of generating, developing, selling, distributing and using hydro-electric power and also power to erect, construct, maintain and operate pulp and paper mills. The site of the proposed pulp and paper mills is at the Narrows on the Tobique River in the county of Victoria. Both a ground wood mill and newsprint plant will be erected at this point. The proposition is one that involves many millions of dollars. The authorized capital of the outset is

\$1,000,000 but authority is given to increase the amount to \$5,000,000 when deemed desirable.

It has been said that the Fraser Companies were about to take over the timber limits of the New Brunswick Railway Co. which consist of 1,700,000 acres. This report, however, is definitely denied by the solicitors of the railway who declare that the Fraser interests did not hold an option on the lands referred to and had not taken them over.

Why Transportation is Tied Up

The United States railways have from 18,000 to 20,000 more cars belonging to Canadian railways, than railways in Canada have belonging to the United States.

The railway expert who made this statement recently in Toronto, declares the situation is such, that Canadian railways cannot afford to send many cars to the United States at the present time, without seriously interfering with the service in Canada. At the present time, due to the car situation, the Province of Quebec with its great export trade in pulp products, is in a most serious position.

"We have to ask the United States railways to send cars for the products, due to the large balance in our favor," he added.

Asked what had caused the present situation, he replied "that there was a great shortage of cars on the railways of the United States. The United States Railway Administration should have had more cars built. They needed great amounts of pulpwood and other products, and Canadian cars were sent over to carry the exports."

There has been for years a balance of cars in our favor in the United States. It has been decreasing right along. When the United States has plenty of cars, it is better for them to send their cars on to our lines for products because a per diem allowance has to be paid for the use of the cars.

Aircraft Patrol for Forests Works Well

The use of aircraft in forest fire patrol work and forest mapping is to be carried out on a greater scale this season than last, although the whole question of aircraft in forest ranging is still in its experimental stage.

Last year the Canada Air Board arranged that the St. Maurice Forest Protective Association should use two aircraft, and much good work was carried out. This season the Laurentine Pulp & Paper Company is going to use the two machines which the St. Maurice association had last year. It is also learned that Price Bros., Que., have engaged an aviator, who is now in England buying a hydroplane, to carry out experimental mapping and ranging work this season. In addition the Air Board in conjunction with Provincial authorities is contemplating further experiments along the lines carried out last season.

While it is not believed that air patrol can displace existing ground organization, according to Mr. Clyde Leavitt, Chief Forester of the Commission of Conservation, it should be able to reduce the necessity of further large extensions, and to greatly increase the effectiveness of forest fire protection, provided the cost does not prove prohibitive, as it is believed will not be the case. It is significant, Mr. Leavitt points out, that the United States Air Service is requesting authority for a large program of air patrol over the forests of the Western States. The possibilities of aircraft in forest mapping appear decidedly encouraging.

Will Develop Lands in New Brunswick

There is a persistent report in generally well-informed circles that a large interest in the New Brunswick Railway Land Company, who hold more than 1,500,000 acres of timber lands in New Brunswick, has been purchased by the Fraser Companies, Limited, or their representatives. It is known that some time ago representatives of the Frasers and the company of the so-called railway lands met here, but since that time numerous denials have been made that the Frasers had become owners of an interest in the land company. The stories have been revived, and it is said that the application of the Messrs. Fraser and other associates for authority to dam the Tobique River, develop power and erect pulp and paper mills at the Tobique Narrows is really part of a big development project, in which the New Brunswick Railway Lands are to be utilized.

A negro was trying to saddle a fractious mule, when a bystander asked: "Does that mule ever kick you, Sam?"

"No, suh, but he sometimes kicks where I'se jes' been."

Have you any "slow" stocks in your yard? You can get rid of them at a profit if you will advertise wisely. If you can't find a market for them, create one. There is a use for everything.

How Lumber Production Conditions Change

Deterioration of Man-Power in Canadian Woods Operations is Most Marked— Serious Problems which Add Materially to Prices of Forest Products

To many a prospective lumber purchaser there seems a disheartening discrepancy between what looks like an abundance of trees in the forest and the amount of money demanded of him for 5,000 feet of serviceable boards. If logs were lumber, the price might indeed be sliced off many per cent., but trees and logs are merely one factor in production. The conversion of trees into merchantable products requires a very unusual application of expensive manual labor, and this factor alone is capable of accounting for the greater part of the lumberman's troubles and greatly increased expenses of producing his goods, says Robson Black in the March issue of the "Canadian Forestry Journal."

Perhaps the fact that may impress the lumber consumer most emphatically is that since the declaration of war and the heavy enlistment from the ranks of Canadian woodsmen, more than 5,000 skilled workers in Eastern Canada alone, highly essential to the conduct of the lumber industry in this section, have been lost to their former employment, mostly through seeking easier and more congenial jobs in towns and cities. The deterioration of man power in Canadian woods operations has been most marked. Years ago a gang commonly accounted for eight to ten thousand feet, board measure, in a day's work. To-day a gang of the same numerical strength will not average half that production. There is a series of costly discrepancies also in the accuracy with which they do their work, so that the old-time skill and economy in turning a stand of timber into the maximum number of merchantable units is not to-day commonly in evidence. This depreciation in personnel is a development that the Canadian lumberman would go far to remedy, for it adds immeasurably to his worries, and, of course, reacts upon the market price of lumber products.

From One to Three Gang System

It has become a common saying to-day that timber cutting has changed from a one-gang system, to a three-gang system, the latter referring to the consequences of industrial unrest whereby quite frequently, while one gang is at work producing logs, another gang is going in to take its place and a third gang of disgruntled men is coming out. As a general figure, it is probably safe to say that coupling quality and quantity of work per day, the bulk of shantymen (in Ontario and Western Quebec at all events) are not above 50 per cent. efficient as compared with the standards of, say 1913.

The shiftlessness of such a large proportion of present-day lumberjacks is perhaps not very difficult to account for when one considers that 5,000 of the veteran workmen, who previously gave stability to the labor market, have quit their old employment and have left the jobs to a like number of uninitiated workmen. To the latter class, shanty work lacks a good many of the social amenities of the town and city, and a few weeks restless employment is apt to make such a man give a willing ear to the camp agitator.

Another interesting and vital fact taken from the 1919-20 experience of lumbermen in the Ottawa valley and in varying degrees over other parts of Eastern Canada, is that in the average camp that should have a staff of 80 to 100 men, labor unrest often results in stripping the camp of half its complement at the period of the year when production should be highest. The reader will bear in mind also that the fixed overhead charges remain about the same whether the woods operations are going at full blast or under a half crew. Foremen, superintendents, bookkeepers, and clerks must be held on the job and the cost of supervision itself has materially risen. At the sawmill end, also, the reduced hours of labor and advance of wages of from 80 to 100 per cent. between 1913 and 1920 bear upon the cost of lumber in the retail yard.

How All Accessories Have Climbed

The wages paid to shantymen always are in addition to board and lodgings. Here we come upon yet another factor that helps to add dollars to the market price of a thousand feet of spruce or pine. Comparing the wholesale prices in 1913-14 and 1919-20 at Ottawa, the four big staple items of food have advanced approximately as follows:

Flour from \$4.80 per barrel to \$13.30.

Oats from 45c per bushel to \$1.00.

Hay from \$15.00 per ton to \$30.00.

Pork from \$23.00 per bbl. to \$48.00.

Plant and equipment, as between the six years mentioned, show

an increase of 150 per cent. Blankets, which were \$4.50 a pair in 1913, are now \$12.50 to \$15.00 a pair.

Wages have increased 120 to 140 per cent. In 1913, wage rates in the woods ran from \$28 to \$30 a month, and to-day are from \$65 to \$80 a month plus board.

Another factor directly increasing the cost of lumber to the consumer has been the advance in freight rates by the railway companies. First came an advance of 15 per cent. with a maximum of one cent per hundred pounds, then a further scaling up of 25 per cent., with a maximum of 5 cents per hundred pounds.

It is well also to bear in mind that the popular notion that lumbermen obtained their limits for "a mere song" and are cashing in on a piece of good luck and government generosity, is not borne out by facts. The "mere song" may run into scores of thousands of dollars, and no investment in the world is so constantly exposed to depreciation through forest fires as is true of a timber limit purchase in most parts of the Dominion. Except for a small area in the Eastern States there is as yet no such thing as timberland insurance against destruction by fire. It is our purpose in an ensuing number to explain some of the facts associated with timberland tenure in Canada.

Sudbury Lumbermen Have Good Season

The lumbermen of the Sudbury district have just finished a fairly successful season notwithstanding the labor unrest that has existed for the past year. The output will be about 25% over last season. All logs, ties and timber will be watered except possibly in some isolated places. While the weather has been extremely cold and the snow deep it was light and did not in any way interfere with good skidding.

The O.B.U. officials have been trying hard to organize One Big Union and if they were successful it would mean the closing down of all wood operations until conditions changed but from present appearances another season will see the end of the O.B.U. so the "Canada Lumberman" is informed. The Finns are the worst element that the lumbermen have to contend with as they cannot be depended on. Even if they agreed to conditions they would break an agreement tomorrow that they made today. There is every indication of an early break up of the lakes and rivers and preparations are being made for the drives in the Sudbury district.

Toronto Firm Makes Interesting Announcement

Terry & Gordon Limited, successors to Terry & Gordon, Toronto, have sent out a neat announcement regarding the recent conversion of their business into a limited company. The object of the change is to enable them to enlarge their organization to handle their rapidly-growing business and to avoid the dislocations and inconveniences that the death or retirement of any partner might cause, and generally to secure the many advantages incidental to incorporation. The directors of the new company are: H. J. Terry, A. E. Gordon, A. E. Cates, A. S. Nicholson and O. M. Hall, who have all been associated with the organization previous to incorporation. The officers of the new company are: President, H. J. Terry; vice-president, A. E. Gordon; secretary-treasurer, A. E. Cates; managing director, A. S. Nicholson. The representatives for Ontario are: R. A. Watt, L. J. Linton, W. C. Thuerck; Ontario and Northern New York: L. M. Dougherty; Quebec and United States, J. H. Poulin; British Columbia manager: F. W. Gordon; Northern British Columbia, A. E. Richards; transportation manager, J. E. Green; accountant, Clarke Allen.

Carew Mill Starts Operations Early

The John Carew Co., Lindsay, Ont., is one of the first to get its sawmill operating for the season. The firm began sawing on April 5th with a large cut for the season in view. F. J. Carew reports that they have at Lindsay 15,000 logs, consisting of hard and soft maple, elm and basswood, which will hold the mill for about three weeks and by that time they expect the lakes will be open so that they may get the logs that have been cut this season down to the mill. It will, probably, be the middle of November next before sawing is completed at the Carew plant.

Personal Paragraphs of Interest

George D. Smith passed away recently at his farm near Rockton, Ont. He owned a large timber tract in the vicinity of Rockton.

Oscar L. Miller of the Miller Lumber Co., Inc., Buffalo, N.Y., spent a few days in Toronto, recently, calling upon the members of the trade.

W. W. Carter, president of the Fesserton Timber Co., Toronto, who has been confined to his home for the past few weeks, owing to illness, is greatly improved.

H. Biermans, general manager of the Belgo-Canadian Pulp and Paper Company, Shawinigan Falls, has returned to Canada after a visit of three months to Europe.

Harry Brown of the Atlantic Lumber Co., Toronto, who spent the past winter in England, returned last month and has resumed his position on the road for the company.

A. E. Clark, former chairman of the Wholesale Lumber Dealers' Association, Inc., Toronto, who was confined to his house for a couple of weeks by illness, is again able to attend to business.

A. N. Dudley, 109 Stair Bldg., Toronto, who specializes in spruce and jack pine, has increased his office quarters and now occupies double the space in the same building.

Alex. P. Read of Read Bros., Limited, who with Mrs. Read and daughter, has been spending the past few weeks among the British West Indies going as far south as British Guinea, has returned to Toronto.

Thos. D. Lovering, secretary-treasurer of J. H. Allan & Co., wholesale grocers, St. Paul, Minn., spent a few days recently in Toronto on his return from the south, as the guest of his brother, W. J. Lovering, wholesale lumberman.

A. E. Clark, of Toronto, has been elected one of the trustees (who will serve for three years) of the National Wholesale Lumber Dealers Association, New York. Mr. Clark is also a director of the National Hardwood Lumber Association of Chicago.

Frank X. McDonagh, son of R. McDonagh, wholesale lumberman, Toronto, who returned some time ago from overseas, has taken a position with the firm of Hart & McDonagh in their yard at the foot of Spadina Ave. Mr. McDonagh enlisted in 1915 with the 35th Battalion, and was for a long time connected with the Records Office in London, Eng., where he received his discharge before coming back to Canada a short time ago.

John P. Waters has joined the buying and inspecting staff of Hart & McDonagh, wholesale lumbermen, Toronto. He was for the last ten years connected with the Wm. Laking Lumber Co., Toronto, inspecting and travelling, and previous to that with Lauder & Spears for a considerable time. Mr. Waters is thoroughly experienced in both the hardwood and softwood ends and has a practical acquaintance with the lumber game from the stump to the finished product.

Lester G. Jackson, late of the Canada Lumber Co., Weston, Ont., who saw service overseas, has joined the selling staff of Campbell, Welsh & Paynes, Toronto, and will cover western Ontario. Mr. Jackson, whose father is a member of the firm of West & Jackson, retail lumber dealers, Tillsonburg, Ont., is looking after the ground formerly supervised by J. L. McCormack, now of the firm of McCormack & Stewart, Hamilton, Ont.

C. J. Brooks, who for three years was the Eastern representative of the Vancouver Lumber Co. of Vancouver, with headquarters in Toronto, and left a few months ago for Vancouver, where he was associated with the E. C. Walsh Lumber Co., recently returned to Toronto. He has opened an office at Room 33, Canada Permanent Building, Toronto Street. Mr. Brooks is now representing Timms, Phillips & Co. of Vancouver, who are specialists in Douglas Fir lumber and timber and red cedar shingles. His many friends are pleased to welcome him back to the East, where he enjoys a good connection with the industry, and will wish him every success in his new sphere of activity.

L. M. Bickford, vice president of the Nashwaak Pulp & Paper Co. of St. John, N.B., died recently after a short illness. He was one of the leading authorities on pulp and paper matters in the United States and was a frequent visitor to St. John and other Canadian cities. Mr. Bickford was also president and general manager of the Oxford Paper Co. at Rumford, Me., and vice president and general manager of the Cape Breton Pulp & Paper Co. in Murray, C. B. In addition, he was president and general manager of the Maine Coated Paper Co. at Rumford, and president of the Montmorency Lumber Co. of Montmorency, Que. He was 56 years of age and leaves a wife and one daughter. Mr. Bickford had two residences, one in New York City and the other in Portland, Me.

Edward Clark of Edward Clark & Sons, and W. S. Kelly, of Toronto, manager of the Ballantyne Lumber Co., Trout Creek, Ont., who have been spending the winter months at Los Angeles and other points in California, have returned home. They thoroughly enjoyed their outing and speak in the highest terms of the delightful associations of their visit.

The many friends of Capt. G. T. Reid of Toronto, son of John B. Reid, president of the Ontario Retail Lumber Dealers' Association, are congratulating him on the advent of a son and heir in his home. Capt. Reid has been managing the business of the Reid Company ever since his return to civil life in the spring of last year. Mr. and Mrs. John B. Reid, who have been spending the past few weeks at Atlantic City, will return to Toronto at the end of the month.

Among those who attended the annual convention of the National Wholesale Lumber Dealers' Association, which was held recently in Washington, were: C. W. Wilkinson and wife, Toronto; H. G. McDermid and wife, Toronto; H. J. Terry and wife, Toronto; J. C. Scofield, Windsor; W. Gerard Power and wife, St. Pacome, Que.; Dan McLachlin, president of the Canadian Lumbermen's Association, Arnprior; E. H. LeMay, Montreal; Oscar Thompson, Syracuse, N. Y., (representing Union Lumber Co.), Toronto; Frank Power and Thomas McCarron, St. Pacome, Que.; Gordon C. Edwards, Ottawa; R. F. Blair, Montreal; Frank Hawkins, secretary of the Canadian Lumbermen's Association, Ottawa, and Horace Boulbee, secretary of the Wholesale Lumber Dealers Association, Toronto.

George A. Houston, manager of the Cleveland office of the Long-Bell Lumber Company, Kansas City, Mo., has been named manager of lumber sales to succeed William M. Beebe, who recently resigned to become President and General Manager of the newly organized Burton-Beebe Lumber Co., Seattle. The lumber sales department will continue, as in the past, under the supervision of M. B. Nelson, vice president and general sales manager. The new manager of lumber sales has been with the Long-Bell company since 1907, when he joined the organization as quotation clerk in the sales department. Later he became a salesman in St. Louis territory, and in 1911 was put in charge of the Cleveland office. Last year he was elected president of a division organization of the Southern Pine Salesmen's Service Association. Prior to his connections with the Long-Bell Company, he was employed at the Barham, Ia., mill of the W. R. Pickering Lumber Company.

Valuable Timber Tracts Change Hands

It is reported that valuable timber tracts along the St. Croix River, N. B., owned by H. F. Eaton and Sons, of Calais, Maine, have been sold to E. B. Draper, of Bangor, Maine.

The transfer is said to have included 262,000 acres of timber lands at the headwaters, sawmills at Milltown, wharf property at Calais and five sailing vessels, and involves the sum of \$4,000,000.

It is understood that Mr. Draper will also take over 93,000 acres of timber lands in the Aroostock region. Several valuable water rights are included in the transaction. It is believed it will mean a revival in the lumber industry along the St. Croix.

Australia's Great Need of Dwellings

In Australia as elsewhere there is great need for more houses. All the houses that are being erected within a radius of 15 miles of Sydney are made of brick and roughcast. Practically all the material required for building purposes is made in Australia.

All the woodwork used on the building is grown and manufactured to shape in that country. Window-sashes, doors, cupboards, and palings are made of Australian wood. The timber trade is one of Australia's most important industries. With the return of the troops the industry, which had fallen back during the war, is again making great strides.

The Termination of News Print Control

The right of the Board of Commerce to order Price Brothers and Company to ship newsprint to specified firms in Montreal at a fixed price, which was lower than the price obtainable in the U. S., was not upheld by the Supreme Court in a decision handed down at Ottawa recently. The Court rules that newsprint is not a necessity of life in the sense that it is necessary to the physical life of the individual.

The Supreme Court decides that orders-in-council under the War Measures Act are reviewable by the court when their validity is called in question.

The judgment is considered to mean the end of Government control of newsprint.

Railway Board Should be Abolished

Now that the Government is Operating One Half of the Country's Railway Mileage, Says Mr. Duthie

"Our Transportation Problems," an address by James Hunter Duthie, featured the banquet tendered by the U. F. O. to the Council of Agriculture recently. Mr. Duthie is a member of the MacDonald Lumber Co., 34 Victoria St., Toronto.

A campaign for a general advance in railway rates was now being waged, said Mr. Duthie. If successful, the victims should be the farmer and the consumer. "A blanket advance in rates is in the nature of a direct tax on the individual citizens," said he. "Has the Board of Railway Commissioners received authority from Parliament to impose taxes on the people?" In any case the board had outlived its usefulness and now that the Government is operating one-half the country's railway mileage, "we have a right to expect men will be placed in charge of the lines who will operate them honestly and efficiently, with the idea of giving the people service at a minimum cost."

He quoted the case of a car of lumber shipped from Douglas, Ont., to Toronto, 330 miles, freight charges being \$72, but when the car had to be sent a further five miles to West Toronto an additional \$48 was charged. Railway officials admit the injustice of it, but said it was in accordance with tariffs approved by the Railway Commission, and they had no discretion. "And these are the kind of rates D. G. Hanna seeks to have advanced 40 per cent," said Mr. Hanna.

"Traffic can be moved by water at approximately one-third the cost of rail transportation; and by a lake and rail route at two-thirds the cost of rail shipment," said Mr. Duthie. "The time has come when we must again revert to first principles and utilize to the fullest extent the magnificent stretch of waterways for the movement of commerce."

Bitter opposition to improved waterways had developed, "but more is to be feared from the work that will be done under cover by the great railroad and ocean steamship combinations." Already a movement had been started in the U. S. to dismiss the International Waterways Commission.

"The taking over of the Canadian Northern and Grand Trunk Railways by the Canadian Government is also likely to exercise an adverse influence on the deep waterway project, as the Government will be somewhat reluctant to further any proposition that may appear to be inimical to the interests of the Government controlled railways," said Mr. Duthie. "The evidence that is now being given before the International Waterways Commission is largely in the nature of a preliminary skirmish; the real battle will begin when that commission makes its report to the Governments of Canada and the United States. With the idea of counteracting these influences the National Waterways Association of Canada is being organized, and its purpose is not only to work for the construction of a deep waterway to the sea, but also to investigate the possibilities of developing water transportation throughout the country where it can be done with advantage to the people. The association hopes to have a membership of 100,000 throughout Canada."

Re-designing Planing Mill Exhaust Systems

An interesting example of how re-designing of the planing mill exhaust system for conveying all chips, shavings and dust from the machines can be made to pay, is furnished in the case of a large mill whose work possessed unusual features. The material to be carried away was rock gum flooring chips, a heavy wood to handle and this waste had to be carried the exceptionally long distance of 500 feet to the incinerator. To furnish sufficient draft for such a long carry it was necessary to operate the fan at high speed, which resulted in continual belt trouble.

The B. F. Sturtevant Company, Ltd., of Galt, Ont., was the concern called in to re-design the system and provide an efficient method for handling the material. This was not only accomplished but at the same time a saving was effected in power and deterioration which had become rapid, was rendered practically negligible for a long time to come. It was found that the fan in use was of an old type and that the size of the normal connections to this fan, which was of the high-speed design type, was much larger than the load (consisting of a comparatively few chips) required. The wood refuse was continually being precipitated in the piping, causing endless trouble. It was that the old system was not properly designed to provide uniformity of velocity in conveying of the material.

The equipment of the Sturtevant Company, installed to overcome the difficulties, as stated, consisted of a slow speed, low power fan, in place of the high speed fan, and a separate collector which, in turn, was connected to an auxiliary exhaustor and from which the refuse was carried to the incinerator. By dumping the chips and shavings in the separate collector and using the secondary fan, con-

tinuous, uniform, efficient suction was maintained at every point in the line and stoppage in the piping entirely prevented. At the same time, by changing to a fan of the slow speed type, belt trouble was wholly eliminated and power consumption lowered. The velocity of air in the pipes was increased.

The cost of such re-designing is usually not great, as planing mill exhaust systems now in use are, to a large extent, convertible, so that changes can be made where needed and still a considerable part of the installation be utilized. A reduction in operating expense results in such cases because of, first, the improved suction system and, second, the scientific regulation of speed. Economy is affected in power, consumption, and operation is brought up to modern standards. The Sturtevant Company have printed a new book dealing with the subject of modern planing mill exhaust systems and their value in providing clean shops and eliminating fire risk due to shaving accumulations.

How Long Will Pulpwood Supply Hang Out?

A cord of pulp wood sold at the mill at \$2 and newsprint paper was plentiful and cheap some fifteen years ago. But that was when men could be hired to work in the woods at \$30 a month, and glad of the chance, while pork was \$15 a barrel and beans \$2 a bushel, with everything else in proportion. Also, there were more trees waiting to be cut down and fewer newspapers and magazines and public documents to be printed.

To-day the cord of peeled pulp wood is worth \$21 at the mill, because the loggers get \$65 to \$85 a month and live like fighting cocks regardless of the high cost of food, while everybody else who touches a hand to the forest product, from the first stroke of the axe into the tree until the log comes out of the machine in the form of white paper, gets sky-high wages, and that, with an abnormal and constantly increasing demand, explains why newsprint costs four or five times as much to-day as it did in the dawn of the century.

Forestry experts declare with due solemnity that at the present rate of cutting and waste the supply of softwood timber in the Eastern United States will be exhausted in 1969, while Maine's forests are certain to disappear about the year 1955 or maybe a few years earlier.

It used to be said in the olden days that the log cut was offset by the growth of the forest—the natural increase, but that was before the pulp mills came to help the saw mills eat up the trees, and also before the multiplication of railroads sent fires raging through vast areas of virgin growth and voracious insects spread havoc in the timber. Now it is asserted by the experts that fires, storms and hungry bugs destroy more than the annual growth of timber, so that what is taken by the lumbermen for the supply of saw mills and pulp mills, an ever-increasing toll, is dead loss—a drain upon the total resources that cannot be made up by all the efforts at reforestation in this generation or the next—probably never.

According to the estimates of the United States forest service, there were standing in the country east of the Mississippi River in 1918, about 1,000,000,000 feet, board measure, of softwood timber, and the consumption of this timber amounted annually to 20,000,000,000 feet for pulp, so that, assuming that the natural increase is wiped out by fire, insect pests and storms, there is a yearly drain of 22,505,510,000 feet.

The Canadian bureau of statistics estimates that there were standing in the eastern provinces of the Dominion in 1917, about 395,000,000,000 feet of soft woods, upon which there is an annual drain of 5,220,000,000 feet for lumber and 984,828,500 feet for pulp. At this rate of consumption the soft wood forests of eastern Canada and that part of the United States lying east of the Mississippi River would be exhausted in 49 years. As the rate of consumption is steadily increasing, the famine is likely to come sooner than 1969.

As yet, pulp mills take only one-eighth as much softwood timber as is consumed by the saw mills, but they are increasing their demands much more rapidly than their competitors, consumption of pulp wood having doubled since 1905, when it was 3,000,000 cords.

Even at the fabulous price of \$21 a cord, the pulp mills are not able to get all the wood they need to meet the demands for their product, for labor is scarce as well as costly. The popular impression that Canada is an exhaustible source of timber supply is very much at variance with the facts.

Since 1917, when the stand of soft wood in eastern Canada was estimated at 395,000,000,000 feet, fully one-third of the trees there have been destroyed by the spruce bud worm, and the supply to-day is not more than 225,000,000,000 feet, upon which there is an annual drain by cutting of about 6,200,000,000 feet. In the year 1918 there were imported into the United States from Canada 1,370,027 cords of pulp wood, but since then the volume of imports has declined, owing to the various restrictions imposed by the Canadian government upon the exports.

Mr. Barnhill Reports Business Active

A. W. Barnhill, of Mason, Gordon & Co., Montreal, recently returned from an extended trip through the Maritime provinces. Mr. Barnhill, who reports that business in the East is good, has had a long practical experience in the lumber line both in the East and West and knows the trade from the stump to the planing mill. For

A. W. Barnhill, Montreal, P.Q.

some time he was associated with the Service Lumber Co., of Vancouver, B. C., and was the Montreal manager of this organization. A few months ago he joined the selling force of Mason, Gordon & Co. in succession to Mr. Hugh A. Rose who entered business for himself. He has many friends in the industry who wish him every success in his new relationship.

Will Develop Resources of Gaspé

To better promote the development of the wealth in natural resources of the Gaspé peninsula, an association of politicians, industrial heads and timber limit holders was formed recently in Quebec. It elected the Hon John Hall Kelly to the post of president, and the vice-presidents of the new organization are: Fabien Bugeaud, M.L.A., M.D.; David Champoux, of the Chaleurs Bay Mills, and Eugene Bouillon, of the firm of Robin, Jones & Whitman. A general committee was formed and includes Messrs. Angus McLean, William Power, R. I. Montgomery, J. W. Brankley, George C. Scott, Charles R. McLeay, W. Mullin and W. F. Napier.

The association will have for its main object the improvement of railroad and other transportation facilities to and from the peninsula. It was pointed out that immense wealth, especially in timber limits, is lying idle in Gaspé, merely because there are no transportation facilities. Among resolutions passed by the new association is a motion asking the Federal Government to purchase the railroads at present under operation in Gaspé so as to ensure proper operation. In the meantime, says the petition, the Railway Commission should see to it that a daily mail service be given by the railroad in Gaspé, and the members for the county in both Houses are to be asked, with all executives of villages, towns and parishes in Gaspé, to co-operate with the association with a view to obtaining the state ownership of the present railroads.

Billion in Building Plans Cancelled

An authoritative man, who is not guessing, but is talking from statistics in his hand, states that within the last ten days building plans to the amount of a billion dollars have been cancelled in the United States and another billion, which has been in prospect, has been allowed to go the same way, according to word received from Chicago. Cost is the reason. It is also reported that plans of the General Motors Co. to the amount of \$6,000,000 have been given up. Corroborative evidence is found in the entire stoppage of work on one large undertaking by that company in a western city.

Events occurring in Chicago are in the same line. The advance as of May 1 from \$1 to \$1.25 per hour in the wages of bricklayers and carpenters has given to many men commonly enterprising a chill such as they did not receive from previous advances, which were considered quite sufficient. Contractors are refusing propositions of cost plus, and when they give the prices for which they will

erect structures the figures are so high that the capitalist turns pale. In one instance \$400,000 was stated five weeks ago as the plus cost of a building, and the intending investor was willing to put in \$500,000 if necessary. Within a few days past an estimate of \$1,200,000 has been made as the amount required to carry out the plan.

The cancellation of building plans throughout the United States is perhaps more significant if possible of general liquidation in the near future than anything else that could happen. The building interest was the first to show a conspicuous revival after the armistice and when recovery in other lines had not been demonstrated enough to be seen by the ordinary observer. Roofs and rooms were much needed. At the present time, with the population of the country stationary or declining, the demand is not so imperative.

It must be admitted, however, that in other directions there is no visible curtailment of expenditure sufficient to indicate retardation of business or decline in prices.

Lumber Wanted Regardless of Price

The Minnesota State Department of Agriculture has been investigating the cost of building materials, including the cost of timber, price paid by saw mills and the price charged by lumber manufacturers; also the spread between what the retailer pays and what the consumer pays for lumber. The findings have not been announced.

Lumber dealers assert it is purely a supply and demand market that has forced prices so high. They say the people want lumber regardless of the price and that they are unable to supply the demand.

It has been brought out in the testimony, however, that speculators have flocked to the mills all over the Northwest and outbid each other for the output, knowing they would be able to sell at a profit.

Ocean Rates on Lumber Based on Weight

Lumber firms in Ottawa and other cities have received notice from ocean steamship companies that in future Canadian transportation rates to Europe will be based on weight instead of measurement system, which has prevailed for many years. In fact ever since before Confederation, the historic "St. Petersburg shipping standard" has been in force. The standard was commonly accepted by the trade to mean about 2,000 feet board measure. The new rate which is \$1.00 per hundred pounds will mean an advance in freight rates of about 20 per cent. over these of recent date. This applies in the case of Ottawa shippers to transportation from Boston to Liverpool.

The officials of the lumber industries state that no action will be taken to oppose the increase.

The Nefarious Work of the O. B. U.

Activities of the One Big Union among the lumberjacks in the district of Pembroke, Ont., during the past winter, culminated in a mass meeting in Pembroke recently, when Joe Knight, an organizer and Calgary Socialist, in addressing 500 woodsmen, outlined O. B. U. principles, and stated that the capitalistic class must go. After the address 25 men joined. Mr. Knight admitted that the Calgary convention had sent messages of greeting to the Soviets of Russia and the Spartacans of Germany, and said they would do it again.

Capt. J. A. P. Haydon, editor of The Canadian Labor Press, of Ottawa, defending the trade unions as against the One Big Union. He was given a favorable reception, and stated that the One Big Union and the I. W. W. were one and the same. He declared that during the war it had been proven by the United States Department of Justice that the I. W. W. received funds from Bolshevik Russia and from German agents. The trade unions stood for law and order.

Mr. Knight frankly declared that the object of the One Big Union was to set up community control, and to attain this end by direct action. He said the O. B. U. was sweeping the country, and that the international trade unions and the American Federation of Labor had ceased to exist. He stated the O. B. U. tolerated the Government because it was the master power. He especially condemned Samuel Gompers, Tom Moore and P. M. Draper and the printing trades for their continual interference with O. B. U. propaganda.

How Lumber and Pulpwood Pile Up

F. S. Cahill, M.P., of Pontiac, recently inquired in the House of Commons as to 60,000 cords of pulpwood said to be lying along the railway track on the Transcontinental Railway, due to shortage of cars. In the same district there is also 30,000,000 feet of lumber awaiting shipment. Mr. Cahill also stated that 6,500 cars are required to transport this lumber, and that only fifty cars were supplied during February.

Inquiry Into Timber and Pulp Concessions

A commission, consisting of Messrs. Justices Riddell and Latchford, has been appointed by the Ontario provincial government to conduct an inquiry into affairs of the Departments of Lands, Forests and Mines. The investigation has been going on for some time now and will be a thorough one, covering timber limits, pulp wood concessions and mining concessions. Incidentally there will be some probing into ways and means of increasing the revenue of the province in these resources. It is the intention of the commission to go back through the records for ten years and see who holds the timber limits and pulp limits of Northern Ontario and the mining claims of Porcupine and Temiskaming. The Order-in-Council sets forth the following facts in connection with the scope of the work that the commission is undertaking:

The accuracy or otherwise of all returns made pursuant to the Crown Timber Act, section 14, by any holder of a timber license.

The cutting by timber licenses or other persons of timber upon Crown lands in respect of which timber licenses have not been issued.

Any damage done to the timber or freehold by any holder of timber licenses through violations of the provisions of the Crown Timber Act, and any regulations based thereon.

As to persons who are or have been responsible, directly or indirectly, for any irregular practice in regard to the foregoing matters, and as to beneficiaries of the same, and as the extent to which the revenues of the Crown have suffered, or damage has been sustained by the Crown thereby.

And generally, to inquire and report as to all matters incident to the foregoing matters and into all other matters connected with the administration of the Crown Timber Act or any regulations based thereon.

And that such commission shall confer upon the commissioners the power of summoning any person and requiring him to give evidence on oath, and produce such documents and information as said commissioners deem requisite for a full investigation.

Busy Driving Operations by Lumber Firms

The last issue of the Labor Gazette, Ottawa, which is published monthly by the Department of Labor, contains an interesting review of lumber and logging operations from different parts of Canada for the month of March. The Gazette says:—

Nearly all the lumber camps in the Maritime Provinces completed their cuts and were preparing for the spring drive; woodsmen, however, were still in demand with contractors who started late. With an early drive the sawmills were expected to start soon and keep large numbers employed until summer. Amherst reported lumbering as never more active, with a demand for expert woodsmen impossible to supply, as they were unwilling to start work so late in the season. Similar conditions prevailed at New Glasgow and at Charlottetown. At Bathurst, St. John and Moncton there was still a call for men for the woods; the lumber firms took on additional help for hauling. Fredericton reported great activity in the lumber camps. Sawings operations started on a small scale at Newcastle, with a slight demand for sawyers and mill hands. At Campbellton the demand for woodsmen ceased during the month. In the Quebec district lumbering was in full progress under very favorable conditions. Great activity was reported at Sherbrooke in the camps for timber, railway ties, telegraph and telephone poles, and in the sawmills and shingle mill. In the Ottawa and Hull district the lumber camps were all active though there was still a shortage of men willing to go to the bush. Pembroke reported a demand for loaders and teamsters, a number of camps finishing the log haul and laying off men. The lumber camps at Peterborough were still very active and the saw mills were being prepared for the season's large cut. Most camps at North Bay finished their winter cut and started to haul, which meant a reduction of staffs of about 20 per cent. The saw mills at Owen Sound were busy. At Sault Ste. Marie lumbering operations were very active and at Port Arthur and Fort William some demand for woodsmen still continued. At Winnipeg there was still a strong demand for woodsmen, and at Dauphin, Prince Albert and Saskatoon experienced men were sought for the bush. A similar demand existed for the camps round Edmonton. Logging operations at Fernie were hampered by unfavorable weather; hauling was active at the end of the month, with demand for hookmen, swampers, sawyers and teamsters. Conditions were similar at Cranbrook, lack of snow delaying logging, but later there was a call for hookmen, teamsters and mill hands; the Canadian Pacific Railway mill at Yahk was ready to start work. At Nelson also, activity increased towards the end of the month. Prince Rupert reported a demand for bushmen, teamsters, fallers and loggers along the Grand Trunk Pacific Railway as far as Smithers, with a demand from Queen Charlotte Island. The lum-

ber mills at New Westminster continued busy and two mills restarted. Vancouver reported logging operations very active throughout the province, saw and shingle mills being fairly busy. At Victoria also activity continued in all branches of the lumber industry. Nanaimo reported the mills and logging camps in Vancouver Island as brisk, all camps working full time excepting one at Alberni, where a strike was in effect during the latter part of the month. The saw mill at Courtenay commenced operations for the season.

Busiest Period in B. C. Lumber History

With demands reaching them from practically all parts of the world, and with an unusually large number of orders for Spring requirements confronting them in the home markets, the lumber mills of British Columbia are passing through one of the busiest periods in their history. So great have been the demands upon them it is stated that some of the mills have even been forced to cease taking business until shipments and orders come nearer balancing than they do at present, and until transportation facilities and labor conditions show a decided improvement over the present.

Despite this great rush of business the majority of the B. C. mills have been giving very little attention, it is said, to the foreign markets, being forced to do their utmost to meet requirements from nearer at hand. It is true that prices have soared lately to a point where it was believed the market would show a very noticeable slackening in demand, but although the upward trend has been very marked, orders have still continued to pour in. Just when the peak will be reached even the most experienced lumbermen will not venture a guess.

One of the lines in the lumber manufacturing industry that is passing through one of the busiest periods it has ever experienced, is the wooden box industry. From far and wide, from all parts of Canada, the United States, from the Orient, the Antipodes, from South America, South Africa and even India, inquiries have been received of late and have resulted in orders being placed with the British Columbia factories sufficient to carry them well into the summer months. Only recently orders for over half a million boxes were placed with the mills and now they are confronted with a demand for 1,300,000 more. These orders have been pretty well divided up among all the factories making boxes, but there is hardly one of them but will have to work double shifts to meet the pressure that has been placed upon them. Other orders are in sight as soon as the mills see their way to handle them.

Some criticism was recently levelled at the lumber industry because of prevailing prices and their tendency to shoot upward. In discussing this phase a man closely connected with the industry pointed out that while there is not a single line of manufactured lumber in British Columbia at present that is not very high in price, it must be remembered that lumber prices remained stationary while other things advanced in price and with the cost of logs rising, it was only natural lumber prices should advance.

One of the difficulties the industry is trying to overcome at present is the shortage of cars, the orders now on hand requiring a considerably larger supply than usual, which does not seem likely to be offering.

Exhibit of Canadian Forest Products, C.P.R. Windsor Street Station, Montreal

Are There Born Lumber Salesmen?

How often you hear the remark made about some go-getting chap that he is a "born salesman." It generally means that the fellow seems automatically to have the knack of disposing of his goods to other people, in exchange for their money, and has distinguished himself along that line to such an extent that good old time humanity immediately jumps at the idea that such ability must be "born" in him.

Simply another evidence of the prevailing belief in that infamous old time law of limitation that has done so much to retard the development of efficiency in the human race. If the "other fellow" who witnessed the success and efficiency of this "born salesman", would grasp the TRUE thought and IDEA that should come from such an example, it would be an INSPIRATION to HIM to do likewise, instead of furnishing him with a depressing thought—that he could not emulate the example because the other fellow got HIS from Providence.

Because the fact of the matter is that nine hundred and ninety-nine times out of every thousand, that "born salesman" is personally responsible and deserves personal credit for what he IS and for what he can DO. It isn't HEREDITY that helps him to "bring home the bacon"—it's DETERMINATION; it isn't INSPIRATION—it's PERSPIRATION; it isn't LUCK—it's PLUCK; it isn't magnetism, or hypnotism, or mesmerism, or any other "ism" that helps him to deliver the goods; it's good old contagious ENTHUSIASM and PEP and PUNCH and OPTIMISM and COMMON SENSE. And that bundle of assets has this "born" stuff backed off the boards, and don't you doubt it for a minute.

And there is nothing on earth that makes a THINKING man so all-fired mad as to see some fine example of what brains and courage and enthusiasm and punch will do for a man, and then have the short-visioned folks look at him in wonder, and declare that he was "born that way".

The man who is successful in disposing of the commodities he has for sale in an unusually effective way, IS a salesman; and so is the PREACHER who puts his line across with his congregation; and the lady who succeeds in convincing her social whirl of her particular high qualifications.

EVERY human being has SOMETHING TO SELL, whether it is man or woman, boy or girl, child or grown up. As we make our way through life we are constantly engaged in the game of "selling something" to the rest of the world, and therefore the fundamentals of salesmanship are in reality of interest to all of us. We are all trying to "sell ourselves" to those with whom we come in contact, in the best possible way. We want the "other fellow" to appreciate our best points, to grasp the best possible opinion of us.

Therefore, it is worth while for all humans to understand that salesmanship of the more successful order, is seldom the result of a kindly heritage. Salesmanship may be "born", but if it is, it is born of HONESTY, DEPENDABILITY, AMBITION, VISION, COURAGE, ENTHUSIASM, ENERGY, PUNCH, AND STICK-TOITIVENESS.

And all of us, who have the DESIRE, can fall heir to that splendid heritage.—Gulf Coast Lumberman.

What Hoo-Hoo is Doing Among Lumbermen

H. R. Isherwood, of St. Louis, Mo., Secretary-Treasurer of the Concatenated Order of Hoo-Hoo in a letter to the "Canada Lumberman" says:—"I find that there are very few that seem to really know the real principles and purpose of the Order of Hoo-Hoo, and as to just what branches of business are eligible for membership and the cost. Therefore, I have prepared the enclosed copy entitled 'What Every Lumberman Should Know.' It occurred to me that this information might be of interest to your readers. Here it is:—

What Every Lumberman Should Know

That the CONCATENATED ORDER OF HOO-HOO is both national and international in scope, with the fundamental basis of principles:

To promote health, happiness and long life,
To advance, practice and encourage education,
science and benevolence among those directly or indirectly affiliated with the lumber industry.

The principle upon which Hoo-Hoo is founded embodies and governs friendship, confidence and brotherly love, which is the foundation upon which the future and success of all associations and organizations depend; therefore,

The greater the success of Hoo-Hoo, the greater will be the success of lumber and allied industries, Hoo-Hoo teaches brotherhood; brotherhood means co-operation; co-operation spells success and success is what we are all striving for.

Hoo-Hoo is the only organization in existence that brings lumber and all allied industries together. Its emblem, the black cat, stands

for lumber, not only in the eyes of lumbermen but in the eyes of the world at large.

The membership fee is \$9.99. Dues \$3.65 per year, or 1 c. per day.

Hoo-Hoo lives, will live, and today is, the only genuine honest-to-goodness, get-together association in the lumber industry, having members not only in the United States but at this time, thirteen foreign countries.

If you are a

- 1—Manufacturer
- 2—Salesman
- 3—Retailer
- 4—Forester
- 5—Trade Press Representative
- 6—Association Secretary
- 7—Lumber Insurance Representative
- 8—Railroad Traffic and Purchasing Agent
- 9—Allied Industries

If you are directly connected with the lumber and allied industries you are eligible for membership.

\$9.99 covers your initiation fee and includes your lapel button. \$3.65 is your annual dues which within the age limit of 65 years includes participation in the Hoo-Hoo Death Benefit policy of \$100.00 without medical examination; and subscription to the Bulletin. The official organ of Hoo-Hoo a publication published not for profit, but to promote acquaintance, health, happiness and long life among everyone connected with the lumber industry.

British Columbia's Big Lumber Business

The total log scale for British Columbia for the year 1919 is 1,758,329,995 feet as compared with 1,761,184,406 feet in 1918, according to a statement issued by Hon. T. D. Pattullo, minister of lands.

Considerable increases are recorded in Kamloops and Fort George districts and Vancouver Island, while decreases are shown in Cranbrook, Nelson, Vernon, Vancouver and Prince Rupert districts.

The decrease in Prince Rupert district is due to the cessation of aeroplane spruce cutting operations, while labor difficulties and the extremely heavy fire season tended to reduce operations in other districts.

Complete returns are not yet at hand from all of the forest products industries, but a preliminary estimate places the total value of the industry at not less than \$62,000,000 for 1919 as against \$54,000,000 in 1918.

It is expected that the value of the lumber cut will amount to \$31,000,000 while the value of the shingle industry is placed at \$12,801,564 and box industry at \$2,142,000.

The cessation of building operations during the war years brought about a tremendous demand for all lines of building material last year. This demand would have been much greater had not labor troubles developed early in the season in prairie and eastern Canadian centres and manufacturers face heavy prospective buying this year with depleted stocks on hand.

Water-borne lumber shipments from British Columbia last year are shown in detail below. The total increase over 1918 is 17,000,000 feet, largely due to greater business with the United Kingdom. Included in this table are 49,000,000 feet of the 70,000,000 feet order secured for British Columbia exporting mills early last year.

	Feet
Australia	6,691,728
South America	1,551,774

Total

The pulp and paper industry again shows a considerable increase in the volume and value of business done compared with the previous year. The output was as follows:

	1918 tons	1919 tons
Pulp		
Sulphite	66,054	80,047
Sulphate	12,188	9,473
Groundwood	91,145	99,719
Paper		
Newsprint	112,205	123,607
Wrapping	8,277	7,202

The total value of the pulp and paper sold was \$12,544,257 as against \$10,517,250 the previous year.

Mr. Booth Passes His 93rd Milestone

Mr. John R. Booth, Ottawa, the Lumber King of Canada and the owner of the largest timber limit holdings in the world, celebrated his 93rd birthday on Easter Monday, April 5th. He is the "grand old man" of the great lumber industry in which his name is known and revered the world over. Thousands of friends in all parts of Canada will be pleased to learn that he is enjoying excellent health. He commemorated his 93rd natal day as usual by working and according to his custom for many years posed for a new photograph. The office staff and superintendents sent a bouquet of 93 roses to Mr. Booth's home on Metcalfe St., Ottawa. The veteran lumberman, pulp and paper manufacturer and railway builder was born in Shefford county, Que., on April 5, 1827 and on his recent birthday received congratulatory messages from numerous friends both far and near. He came to Ottawa in 1857—just ten

John R. Booth, Ottawa, Ont.,
Heading for the century mark.

years before Confederation—with only nine dollars in his pocket. It is said he first went to work for sixty cents a day. He operated a small shingle mill from which his present mammoth plants in the lumber, pulp and paper lines have developed. For some years the average number of hands on the payroll of the firm which bears Mr. Booth's name has been between 2,500 and 3,000, and the monthly payroll in the vicinity of \$200,000.

Despite his advanced years, Mr. Booth is in particularly good fettle. Always interested in sport, he attended the Ottawa-Seattle Stanley Cup series. He faced the puck for the players and was roundly applauded when he appeared on the ice at the last game. Mr. Booth possesses a very keen memory and there is not one small detail of the pulp, paper, and lumber business with which he is not familiar. The aged "lumber king" has kept in close touch with the business and rarely remains away from his big yards.

Death of Mr. William D. Lummis

In the death of Mr. William D. Lummis of Toronto, who was a prominent and successful lumberman, the industry loses one of its outstanding members. Mr. Lummis, who passed away at his home, 98 Bedford Road, on April 5th, after an illness of several months, was in his 69th year. Born in St. Renault, Que., he spent practically all his life in the lumber line. His first connection with wood products was gained at Wyebridge, Simcoe County, and next as general manager for Cooke Bros., whose mills were at Spragge, Ont., for some ten years. After the firm ceased manufacturing, Mr. Lummis leased the mills and operated them for two years with most satisfactory results. He was later connected with Playfair & White of Midland in their operations and subsequently was president and general manager for a long period of the Sarnia Bay Lumber Co., Sarnia, Ont. Associated with him in this organization were W. J. Bell of Sudbury, the late W. A. Anderson of Ottawa, the late John Ferguson, M.P. of Renfrew, J. J. McFadden, Spragge, Lorne Hale of Pembroke and others. The limits of the company at Naira Centre on the Soo line were sold in 1906 to Graves, Bigwood & Co., Toronto.

Along with H. J. Bartlett of Orillia, Hon. George Gordon of North Bay, A. B. Gordon of Toronto and others, the Cavendish

Lumber Co. of Lakefield was formed and purchased the limits of the Dickson Company of Peterboro. Mr. Lummis was connected with the Cavendish Lumber Co. from 1906 to 1913 and was the president of the Union Lumber Co., Toronto, at the time of its inception in 1911 but retired a few years later, being succeeded by Duncan McLaren. The late Mr. Lummis also was interested financially in the Bartlett Lumber Co. of Sheldrake, Mich., and only recently disposed of his holdings. At the time of his death he had practically severed his connection with all lumbering activities except a directorship on the Petawawa Lumber Co. of Pembroke, and his holdings in the Gordon Development Co., which concern possesses some valuable limits in British Columbia.

Mr. Lummis who had lived in Toronto since 1900 had an office in the Bank of Hamilton Building. He is survived by his wife and one daughter, Miss Jessie, who resides at home. Mr. A. B. Gordon, lumberman, of Toronto, is a brother-in-law. Mr. Lummis was a member of the Rosedale Golf Club, the Mississauga Golf Club, the Caledon Club, the National Club and the Royal Canadian Yacht club. The funeral to Forest Lawn Mausoleum was attended by a large number of personal friends and fellow lumbermen from various parts of Ontario and many beautiful floral offerings bore silent evidence of respect and esteem.

Prominent Railway Tie Man Passes Away

Mr. John M. McCandless, president of the Canadian Tie & Lumber Co., Limited, 511 Temple Bldg., Toronto, passed away recently in Johns Hopkins Hospital, Baltimore, where he had been for some weeks. He spent the past winter in Miami, Florida, in the hope of regaining his health which had not been robust for a long time. Many friends will regret to learn of the passing of this genial, kindly gentleman, who was associated nearly all his life with the railway tie business and died at the early age of 53. The remains were taken to Detroit for interment in Evergreen Cemetery. A wife and one married daughter survive. Two brothers, George F., secretary-treasurer of the Canadian Tie & Lumber Co., and Samuel F., sales manager are left. The late Mr. McCandless was also associated with McCandless Bros., Detroit, in which city he resided but was a frequent visitor to Toronto. For the past 15 years this firm has specialized in railway ties, switch ties, piling and allied lines.

The late John M. McCandless began his career with the Pere Marquette Railway and rose to the position of chief inspector of the line, with headquarters at Saginaw, Mich. When the Standard Tie Co. was organized he left the railway service to take charge of this organization, with head offices at Paducah, Ky. In association with his brothers, the Canadian Tie & Lumber Co., Limited, was formed three years ago. This concern buys over 2,000,000 ties a year and has contracts for supplying the Grand Trunk Railway, the T. H. & B. and the Michigan Central.

The passing of Mr. McCandless, as president of the company, will be deeply regretted. G. F. McCandless now becomes president and treasurer of the Canadian Tie & Lumber Co., and S. F. McCandless, secretary and sales manager.

James Rockett Power Called Suddenly

A prominent athlete and lumberman passed away at Quebec on April 6th in the person of James Rockett Power, who succumbed to an attack of pneumonia with which he was stricken on Good Friday. Rockett Power became prominent in sport as a student at Loyola College, Montreal, and later with the old Crescent hockey team and the Quebec senior team in the days of amateur hockey. At the time of his death he was manager of the River Ouelle Pulp and Paper Company, at River Manie, P. Q., but contracted his last illness in Montreal having come there to spend Easter. He is survived by his widow and one child; his father and mother, Mr. and Mrs. William Power; four brothers—W. Gerard Power, of St. Pamel, former president of the Canadian Lumbermen's Association; Captain Joseph Power, Major Charles Power, M.P., and Captain Frank Power; two sisters, Mrs. Noel Barclay of Montreal, and Mrs. Frank A. Mosley, of Montreal. His father, Mr. William Power, is absent in England.

Counsel Appointed in Timber Investigation

R. T. Harding, Toronto, as counsel, and J. M. McEvoy, London, as assistant counsel, have been appointed to act before the Riddell-Latchford commission which is inquiring into the accuracy of returns made to the Government by holders of timber licenses, the cutting of timber by others who are not licensed, any damage done to timber by license holders, through violations of the acts, besides other matters which the Government regard as being irregular.

It is probable that there will be some public hearings of this commission. Hints are already given that some prosecutions will result from the inquiry.

Retailers Look for Good Year's Trade

Members of District No. 6, Ontario Retail Lumber Dealers Association Hold Splendid Meeting in Toronto

If there is one branch of the Ontario Retail Lumber Dealers' Association that is alive and aggressive, it is that of the men from Orangeville and surrounding villages and towns. They meet every few months to discuss matters of mutual interest and local importance, and the interchanges of thought and opinion have made the yardmen of that district thoroughly up-to-date in their methods and awake to every business opportunity that presents itself.

The usual Spring meeting of the branch was held at the Prince George Hotel, Toronto, on April 7th. J. A. Matthews of Orangeville, presided and there were present J. B. Mackenzie of Georgetown, secretary and organizer of the branch, Udney Richardson, ex M.P.P., Elora, A. Henderson, Cheltenham, Robert Dixon, Grand Valley, W. G. Gorvett, Arthur, John Howes, Harriston, A. W. Merkle, Milton, and H. Boulbee, Toronto, secretary of the Ontario Retail Lumber Dealers' Association.

Various topics were discussed including the labor situation, trade outlook, housing problem, rising costs of doing business, replace-

J. B. Mackenzie, Georgetown, Ont.
Secretary and Organizer of the Orangeville
Branch O.R.L.D.A.

ment values, the sale of shingles by the square, the stiff advance in the price of doors of all kinds, and the building prospects for 1920, which are regarded as particularly bright. Many interesting experiences of each lumber dealer in regard to a number of matters were brought out.

The Orangeville branch has, by holding sessions at different places, kept the Association spirit in evidence, and that the social end is not overlooked was evidenced by the fact that the members formed a theatre party at the Royal Alexandra in the evening.

The statement was made by one member that the men in his plant would only work nine hours owing to other industries having cut down the working day to that length of time. Another dealer stated that last month he increased the pay of his men \$1.00 a day all around in order to retain their services, outside industrial competition being very keen. The augmented cost of doing business was referred to as well as the steadily-mounting quotations for lumber of all kinds. The members thought that on all sales in their yards replacement values should prevail and took the position that on all quotations for lumber the stock must be removed within thirty days. In former years some customers would get quotations on quantities early in the year and come around months later to have the bill filled, but, owing to the uncertain situation now, the dealers distinctly set forth that on all materials no quotations furnished will hold unless the consignment is removed within a short time.

Other issues touched upon were collections, the profit and loss of a planing mill in connection with the retail lumber business, the new method of selling shingles and general conditions for 1920. Like every other merchant, the retail lumberman has his difficulties to contend with at the present juncture. By taking counsel together and devising the best ways and means of conducting business they render better and more efficient service and extend their

sphere of usefulness and activity. The members of the Orangeville branch of the Ontario Retail Lumber Dealers' Association are thus keeping to the forefront.

The next meeting will be held in Harriston on Thursday, July 1.

Southwestern Men Will Meet in St. Thomas

It is expected that the annual meeting of the Southwestern Ontario Retail Dealers' Association will be held at St. Thomas, April 29th. W. A. Hadley, of Chatham, is the president of the association, George H. Belton, of London, vice-president, and B. F. Clarke, secretary-treasurer. The directors are L. Travis, Wyoming; E. C. Russell, Walkerville; J. McGibbon, Sarnia; E. A. Smith, Aylmer; Geo. N. Kernohan, London; G. D. McPherson, Merlin; J. C. Scofield, Windsor.

'Twas the Shape of the Camp Cakes

Many a comedy has been played around the story of "Why Father Left Home," but the point of a farcical performance was brought out recently in a Northern lumber camp. The narrative is vouched for by a representative who was there at the time and declares every word is true.

A well-built stalwart lumberjack came up to the foreman, after laboring a few days, and stated that he was going to quit. The boss asked him why and received the curt reply "I'm going, that's all. Have my time made out." When the chap called later for his pay, the foreman thought he would try and pacify him or ascertain exactly what was the cause of or reason for his sudden decision to quit the camp. Men were scarce and the service of Bill was needed. The following conversation took place:

"Is it a matter of money, Bill? If so, perhaps we can fix you up."

"No," came the response, "I have no fault to find with the pay."

"What is wrong then? Is the work too hard?"

"No," drawled the camp jumper, "I can do all the work. No kick on that score."

"Well, Bill, what is the trouble then? Can't you tell us now that you are leaving?"

Bill hesitated for some time and finally objurgated that it was the cook.

The foreman was surprised. The cook had a reputation for being one of the best in the whole section.

"Why," came the surprised query, "is not his bread alright?"

"Oh, yes, the bread's alright."

"What is wrong, then?"

Bill still hesitated and volunteered no specific information, maintaining a surly attitude.

The foreman pressed the point and said "Is it the meat?"

"No," ejaculated the discontented woodsman, "Not the meat."

"What is it then?"

"Well, if you must know," came the warm rejoinder, "It is the cakes."

"Why, what is wrong with the cakes? I have eaten them and they are nice and fresh."

"Oh, well, that may be."

"Then why do you mention them?" pursued the foreman.

"Oh, well, look at the shape of the goll darn things, Who'd eat 'em?"

And this was the sole reason for Bill jumping—Can you beat it?

Disposal of Lumberman's Estate

By a will made February 19, 1913, Peter McGregor, a lumberman, who died February 13, 1920, devised an estate of \$13,127. that has been probated on application of Jessie McGregor, a daughter. The house, at 121 Sunnyside avenue, Toronto, is valued at \$4,000; three mortgages, \$5,568; insurance, \$2,000; book debts and promissory notes, \$1,008; and household furniture and personal effects, \$550. Two daughters, Jessie McGregor, and Jennie H. McGregor, of Calgary, and a son, Marshall McGregor, are devised \$100. Mary C. Quarrie, of Galt, a daughter, receives \$200, and to each grandchild is given \$100.

Increasing Maximum Housing Loans

Authority has been given by the federal administration to the provincial governments to increase the maximum amounts of the loans which may be granted under class "A" of the federal housing project from \$3,000 to \$3,500 for four or five room dwellings, and from \$3,500 to \$4,000 for six or seven room dwellings.

Sticker Lowers Manufacturing Costs

The number of operations that a capable, efficient mechanic can perform on the sticker is almost unlimited and, with proper handling, this is one of the most useful and profitable machines in the wood-working factory.

A well known woodworker recently received a contract for a large quantity of 3 by $\frac{1}{2}$ in. and 4 in. by $\frac{1}{2}$ in. dressed on the face. The usual method of getting out this stock would be to run the lumber through the resaw and then dress it on the planer. Another method often followed, especially in box factories, would be to dress the thick stock on both sides on a sticker or inside moulder and then split it on the resaw. As the quantity of lumber involved was considerable the second handling of the stock, necessitated by using two machines, added considerably to the cost of manufacturing, both with regard to the additional labor entailed and the time required putting it through the second machine.

It was here that the sticker demonstrated how it can save labor and increase production on occasion. The side heads were removed and two circular saws placed on the spindles, being held tightly by suitable collars. Two sets of saws were provided, the smaller pair being used on the narrow stock.

The shoe was made in two pieces the back section extending as far as the inside head. It was designed so that it would lift the upper half of the board as it cleared the inside saw, and at the same time maintain a pressure over the bottom head so as to ensure that the underside was being surfaced.

This rig worked very satisfactorily and made quick work of the contract. The saving in time and labor easily amounted to fifty per cent. When this saving is considered together with increased output and overhead the real value of the saving will be realized.

The same idea may be employed in other ways. For instance, when running rabbeted stock for wire window and door screens it is often possible by using a shaped knife on the top head and a saw or splitter knife on the inside head to cut a half round or other small moulding from the stock ordinarily removed when making the rabbet. This is like money found as the stock and running does not cost practically anything except the added work in setting up.

While this idea is possible of wide application as it may be

How sticker may be used to advantage

worked out when running a moulding that is thin on the edge, yet a considerable amount of judgment must be exercised. As it would not be wise to work this scheme indiscriminately, on a short run, or where the saving effected is almost negligible.

Many operators when running a moulding that is thin on one edge often cut a bevelled piece from the corner which would be removed in making the thin edge and later run this into a small moulding. When lumber values are so high every effort should be made, even at the cost of extra labor and handling, to extract the fullest value from every foot purchased.

Why Kiln Dried Stock Often Warps

As it is now necessary to kiln dry nearly all the heavy lumber, I feel that it might not be amiss to call your attention to some of the difficulties that are often encountered.

A kiln of two-inch oak has been dried; samples are taken at reasonable distance from the end of the boards, and test shows 5 per cent. moisture. This material is run into the mill and worked up into pieces, as indicated in Figure 1.

Almost immediately they begin to warp. What is the trouble?

This factory had no trouble with the last run that was milled with 6 per cent. moisture content.

A more careful test will show something like the following: Take a test piece 2 in. x 6 in. and divide it up into sections as indicated in Figure 2.

Sections 1, 6, 13 and 18 show (say) 1 per cent.; sections 2 to 5 inclusive, 7 and 12, 14 to 17 inclusive (say) 4 per cent.; while 8, 9, 10 and 11 may show 10 per cent. So, when you average it up, you only have 5 per cent.

It is very plain to see what will happen when you mill lumber in this condition, as per Figure 1.

Still you wonder why the other run that contained 6 per cent. did not warp. The reason for this was that the first run was taken from the kiln and not milled for some time, and the excessive moisture that was in sections 8, 9, 10 and 11 moved into the drier sections, and then the immediate outside may have even picked up moisture.

The second run was milled immediately and no chance was given for this equalization.

I know you are in a big hurry—the other fellow is after you

for shipment—but you are much more certain of saving your lumber and pleasing your customer if you wait a while.

I cannot help calling your attention to the piling. Usually the same $\frac{3}{8}$ in. piling sticks are used. This is permissible, but be careful to maintain air spaces, so that the air may have free passage up through the loads of lumber. That is more important than with the thinner stock, for the reason that this thick stock is not subjected to as great a circulation, and if the entire car is not subjected to the same conditions, the retarded sections will not dry as fast as the others—for instance, the ends and sides of car.

Boards that are warped should be loaded in the bottom of the car, and plenty of sticks should be used—say not less than four or five for sixteen-foot lengths.

In drying any kind of lumber, it is bad practice to allow temperatures to go up and down. This practice will prove very disastrous to heavy green lumber.

No doubt you remember the time when you connected a dry kiln up with the exhaust line from the engine and "let her go at that." The only heat your kiln ever had was when the engine was running—off every night and all day Sunday. Your memory tells you that you got along in great shape and made good furniture.

But times have changed. If your memory serves you right, it will tell you that you bought that lumber one year air-dried and then kept it one year on your yard before you put it in the kiln.

So, when you remember how you did "once upon a time," remember the whole story, for you are headed for sure ruin if you attempt to dry the heavy lumber you now have in the same manner as you did in what we are inclined to call "the good old times."

Some Breezy Jottings of Interest

The Mayo Lumber Company's mill at Sahtlam, B. C., was recently destroyed by fire. The total damage was about \$75,000, only part of which is covered by insurance. The loss included a new lath mill, which would have started work in a few days and also about half a million feet of sawn lumber.

The Pembroke Lumber Co. of Pembroke, Ont., will commence operations about May 1st and they have sufficient logs on hand to start up. The Colonial Lumber Co. will also start sawing about the same time. In the meantime alterations and improvements are being carried out by both companies, who expect to turn out respectively 20,000,000 feet of lumber in 1920.

An informal conference of members and others interested in the construction of the Georgian Bay Canal was held in Ottawa recently. The consensus of opinion was that the time is not opportune for the undertaking of any works involving large expenditure, and that before launching on any large undertaking all the projects should be carefully investigated and a settled policy adopted.

Review of Current Trade Conditions

Ontario and the East

There has been a slowing down in lumber sales during the past two or three weeks and the retail trade have been buying only small quantities. Such a state of affairs is, however, not unusual at this time of the year as it is a between-seasons period. The rural yardmen say that the roads have been in a bad condition and farmers are not coming into town or undertaking any building just at present, while the city yardmen declare that the frost is not yet out of the ground. Excavation is difficult and many structures, which are likely to get under way, have only got as far as the preparation of plans and specifications.

There is some disposition just now to hang back and to watch how things are developing. A few more cuts have been disposed of for the coming year, but just now many wholesalers are not particularly anxious to buy and are prepared to tarry a few weeks in order to see how the labor situation shapes up with the opening of the saw-mills and how May-day will be passed in the building trades. Wholesalers contend that manufacturers are asking altogether too much for their stock—away out of proportion to the increased cost in production. On the other hand, manufacturers are not at all alarmed about getting the figure they place on their cuts, as they maintain that stocks are very low and the number of those, who are seeking supplies, is great and competition so keen that the quotations which they name will be easily obtained. Several cuts of white pine, box and better, have been sold at an advance of \$15.00 to \$18.00 and even \$20.00 over last year's figure, while No. 1 and No. 2 hemlock have been disposed of at increases of \$12.00 to \$15.00. Spruce is also much ahead of last year in price levels, \$8.00 to \$16.00 being the jump. One wholesaler stated recently that certain manufacturers were asking more for their white pine for the coming season than he was getting for stock which he had carried over all winter; in other words, that mills were seeking to obtain larger figures for lumber to be cut and delivered anywhere from six to eighteen months hence than the wholesaler can now secure for dry stock on hand, after carrying it in a number of cases for months and paying interest, insurance and other charges.

The situation on the whole is a somewhat complicated one, and just how matters will shape up, it is difficult to foretell. Each week seems to bring some change and western stocks are now arriving in larger quantity and with greater expedition, so far as the railways are concerned. There has been some easing up in prices, and, as will be noticed in another page of the "Canada Lumberman," all shingles are now sold by "the square." It is comparatively easy to obtain flooring, ceiling, siding, dressed and rough clears from the Coast in part car lots, while no difficulty is experienced in getting straight cars of common boards and shiplap. Timbers are also coming through more freely.

Owing to the embargo on C. P. R. cars crossing the B. C. border being still in effect and the drop in the rate of exchange, together with other contributing factors, more Western stuff became available for the eastern market than for some time past. Several cars, which were in transit, reached Cartier, a re-consignment point, without having been sold, and as buyers had stopped purchasing for some time, the result was that these cars were offered and sold at some sacrifice rather than have them detained and carry demurrage.

There is plenty of water in the streams just now, and it looks as if driving conditions will be good and that the various mills will start operations a little earlier than last season. Just what labor is going to demand or how much advance there will be in wages will not be known for a few weeks yet. While buying has been temporarily halted, there is still a decided shortage in many lines, particularly in 1½ in., 8 in., 10 in. and 12 in. cuts in white pine and in 1¼ in. and 1½ in. mill run of these widths.

On the whole, however, there is a feeling of confidence that the present year is going to be a good one in the lumber trade as soon as building gets fully under way and stocks in the retail yards which have been accumulating, begin moving. The prospects for extensions to various manufacturing establishments are exceptionally bright and there is also a pressing need for houses in all towns and cities.

A gain of more than a million dollars over March, 1919, is shown in the value of buildings for which permits were issued during March in Toronto. This amounted to \$2,062,747, as compared with \$1,005,560, a difference of \$1,057,187. A nearly proportionate increase was made for the three months of the year over the corresponding

period in 1919, the figures for these periods being \$4,994,845 and \$1,907,120, respectively, or a gain of \$3,087,725.

Comparative figures for the different classes of buildings, for which permits were issued in March, put brick dwellings first in number with 157 at a value of \$539,100 and garages second with 150, valued at \$85,867. Stores numbered 22, with a value of \$122,000, while factories, although numbering only 6, had a value of \$934,000. The total number of buildings for which permits were issued was 632, as compared with 650 last year.

Great Britain

Conditions in the lumber world are between seasons as regards f.o.b. purchasing, and business in the country. Most of the saw-mills continue very busy and have orders for more than they can carry out. Prices, where f.o.b., are regarded as too high. Most firms have bought at lower figures for early delivery, and the market in Great Britain has not yet risen sufficiently to enable importers to give the prices shippers are now asking. Then as regards spot business, values have also risen so substantially that merchants do not care to lay in large stocks. They find the consumption only moderate, and the tendency on the part of consumers is to hold off. Of course, it is still easy enough to sell deals, and 3 x 7 and up are in excellent demand, but even for these dimensions quotations are so high that the demand is curtailed. As regards smaller stuff, stock holders are, generally, above the market and therefore they are only selling in small quantities for urgent requirements. Repair work houses and factories is accounting for a good deal of the wood now being utilized. Merchants have been stocking plasterers' laths, and slating battens to some extent, in anticipation of the house-building in the spring, but lately the prices of the former goods have become prohibitive. Open-water stocks of laths from Finland should be imported at 4s. per bundle or less, and the price for spot goods, about 5s. per bundle, therefore, is out of all reason.

Speaking of Canadian yellow pine, the "Timber Trades Journal," in a recent issue, has the following note of interest:—

For some time past the situation with regard to the pine market has been a somewhat complex one. Until fairly recently the 1920 cuts of the principal stocks had not been sold, with the exception of one, which, we believe, is largely to be manufactured into lumber for the United States market. The shippers have now arrived in this country, and with the lightest wintering stocks on hand that we ever remember. The prices at which they have already practically disposed of the whole of this small quantity are very much in advance, not only of those obtained last year, but also of those now current in this market. No doubt our readers will appreciate the fact that in the stocks lately acquired by the syndicate there was not one single standard of Ottawa pine. Under these circumstances, it would appear advisable for any users of pine to secure as soon as possible what they require of the existing landed stocks, as in view of the immense shortage there is no likelihood of prices doing other than to advance.

Business in American lumber is still confined to such stocks that are on hand, forward transactions being still affected by the exchange and extremely advanced quotations of shippers. The exchange shows some little improvement, and there is a considerable amount of talk in regard to a lower level of shipping rates; but the high prices, short supplies, and keen demand that exists in the States for all stocks will mitigate against shipping goods at any greatly reduced cost.

Progress in the selling of Swedish and Finnish stocks is much slower than at any earlier stage this year. It might be contended that this is a natural condition following upon large sales, but it would be more correct to say that a good deal remains to be bought by importers who have held off. Prices, however, have reached such a giddy height that the buyers in the United Kingdom are mostly electing to wait a little longer before entering into further commitments.

Swedish lower port deals: 3 x 9 at \$39 to \$40 per standard, and Upper Gulf at £36 10s. to £37 per standard are sufficiently high priced to create this feeling of hesitancy. Apparently the Cape buyers are prepared to go on at much higher figures whenever they can get their specification, but most of the Swedish and Finnish exporters have cleared for the Cape market.

The position of spruce is not clear at the moment, as the trans-

Good Will

—a mighty valuable asset to your business and something that cannot be built up in a few days. It is the result of painstaking efforts to give the customer just a little more than he expects—keeping the quality of your products standard—and backing up every word of your advertisements. In short, it's Service—Real Service—that builds Good Will.

"Broken! What No. 1 Again?"

Yes, broken again! The old, old story of the manufacturer who insisted on using belting of inferior quality. In times of big orders, or important deliveries, when the utmost efficiency is required, inferior quality belts will not stand the strain.

Surely you realize that your belting bill does not consist of its initial cost alone. Consider that tell-tale drag on finances through constant repairing plus loss of time and danger to life.

These items alone during one year will swell to amounts that would keep you installed with "Camel Brand Belting," and in this way insure yourself constantly against shrinkage and excessive repairs, and could be relied on to transmit the full power of your plant with practically no loss. "Camel Brand Belting" may be obtained in all widths. Write us to submit our prices.

8-11 Trenton, Ont.

A Second-Hand Light Carriage

Equipped with Boss-Dogs, to be complete with track. Must be in good condition, ready for immediate shipment. Apply Box 201, Canada Lumberman, Toronto, Ont. 7-8

Busiest Period in B. C. Lumber History

With demands reaching them from practically all parts of the world, and with an unusually large number of orders for Spring requirements confronting them in the home markets, the lumber mills of British Columbia are

passing through one of the busiest periods in their history. So great have been the demands upon them it is stated that some of the mills have even been forced to cease taking business until shipments and orders come nearer balancing than they do at present, and until transportation facilities and labor conditions show a decided improvement over the present.

Despite this great rush of business, the majority of the B. C. mills have been giving very little attention, it is said, to the foreign markets, being forced to do their utmost to meet requirements from nearer at hand. It is true that prices have soared lately to a point where it was believed the market would show a very noticeable slackening in demand, but although the upward trend has been very marked, orders have still continued to pour in. Just when the peak will be reached even the most experienced lumbermen will not venture a guess.

One of the lines in the lumber manufacturing industry that is passing through one of the busiest periods it has ever experienced, is the wooden box industry. From far and wide, from all parts of Canada, the United States, from the Orient, the Antipodes, from South America, South Africa and even India, inquiries have been received of late and have resulted in orders being placed with the British Columbia factories sufficient to carry them well into the summer months. Only recently orders for over half a million boxes were placed with the mills and now they are confronted with a demand for 1,300,000 more. These orders have been pretty well divided up among all the factories making boxes, but there is hardly one of them but will have to work double shifts to meet the pressure that has been placed upon them. Other orders are in sight as soon as the mills see their way to handle them.

Some criticism was recently levelled at the lumber industry because of prevailing prices and their tendency to shoot upward. In discussing this phase a man closely connected with the industry pointed out that while there is not a single line of manufactured lumber in British Columbia at present that is not very high in price, it must be remembered that lumber prices remained stationary while other things advanced in price and with the cost of logs rising, it was only natural lumber prices should advance.

PINE, SPRUCE or HARDWOOD LUMBER

To the Mill Man—I'm always in the market for Lumber, Shingles and Lath.
please mail lists of your stock

Review of Current Trade Conditions

(Continued from page 62)

ferred Government holdings, which may easily dominate the situation, have not yet exerted their full effect. Rates are very firm despite the improvement in the Montreal exchange which is now over the 4-dollar mark. A better view of the spruce position will be possible shortly when the stocks taken over by the Associated Importers Ltd. are being dealt in.

Halifax and St. John's birch planks are in fair demand. The import has fallen off, but there is now a good stock of this description. Shippers ask £39 to £40 c.i.f. for usual specifications. There has been a short import of 2½ in. planks, and a good enquiry for this size is in evidence.

Canadian pine is in improved demand. Values are on the up grade, as shippers are strong holders. The volume of yellow pine in Canada available for export is reported to be comparatively small, and lower prices are out of the question.

United States

The transportation situation and transit cars are still the chief topics of conversation in many of the leading centres of lumber activity. According to a recent report received from Minneapolis, 75 per cent. of the sales being consummated are of that class of stock known as "in transit," and according to one paper, transit stock is being credited with being responsible for whatever depression there is in the price of Coast forest products.

Speaking of the western situation, it is stated that a decidedly optimistic feeling seems to pervade all lumber circles on the Pacific coast. There is no doubt but that some of the stock held at transfer points could be sold to better advantage on the coast than in the Eastern markets.

While the amount of sales which have been made either of transit stock or for mill shipments has not equalled expectations, yet there is no doubt but that the situation is gradually being clarified.

A remarkable similarity in conditions prevails in the lumber industry to-day and those which prevailed a year ago. Up until along in May, 1919, buyers were holding off, waiting for a substantial reduction in prices. Even when the market took an upward turn they refused to place orders, declaring that the improvement was only temporary. Before the summer days had come a scramble for stock developed which shot prices upward and made it possible later for speculators to control the supply. There is a possibility that history may repeat itself. There is a greater need of all kinds of structures to-day than there was a year ago. The railroads, in a few months, will be in a position to improve their property and build cars which they must have to take care of the transportation needs of the country. The export trade is daily becoming a bigger factor as vessels are becoming available. All that is needed to-day to start a run-away lumber market is moderately active buying on the part of the retail lumbermen and manufacturing interests that

consume forest products. The logical conclusion is that if needed buying from these sources is unnecessarily postponed, the chances for stabilizing the market and maintaining the present price basis later is very remote.

In regard to the situation generally, it may be stated that the lumber market is in somewhat of a medley just at the present time. Prices are what the seller asks and the buyer is willing to pay. Buying from the country yards has not been very active of late but this is natural at this season of the year. Sawmills, however, are continuing their activities and accumulation of old orders is far from being cleaned up, though production is increasing. There will, however, be no surplus for many weeks if there is at any time during the present year.

The Southern pine mills are shipping and manufacturing more than they are selling on new orders, but with an accumulation of about 18,000 cars of old business unshipped, there is not much chance for piling up stock that will menace the market. The hardwood mills of the South are also speeding up production, but there has been no recession from the high price level.

Northern pine mills are commencing operations for the summer, but their dry stocks are so low that they cannot fill old orders, to say nothing of taking on new business in quantity. There is a wider spread in Northern pine prices than on any other wood, but the high lists seem as popular with the buyers as the low lists, and every mill that can deliver the goods has no trouble getting orders for them.

In the hardwood field there has been a weakness in gum during the past few days owing to large shipments and a slight recession in the values of quartered oak. The market otherwise continues active with possibilities of further advances on account of extremely low stocks of dry lumber and the heavy industrial demand. Furniture, piano and automobile interests are heavily on the market although some of them, especially the furniture manufacturers, are reported already to have accumulated fair stocks. But these industries have swamped order files; some are refusing further orders on account of inability to handle them, and indications are that they will remain strong factors on the market for some time. However, there has been noted in general business a growing conservatism on the part of the public, which, instead of extravagantly squandering its money as it did a year ago, is now beginning to consider its finances sanely and to count its pennies more carefully. It has been pointed out that this is likely soon to have a tremendous effect on industry in general and on the lumber trade ultimately. It probably is true, as has been pointed out, that what is maintaining industrial activity is business placed during the last year, more than current orders, and that when the manufacturers have caught up with their order files they may have to slow down a bit. Hence it has been suggested by some foresighted business men that lumbermen should not neglect in these days of uncertain prosperity to cultivate the home building germ upon which continued and real prosperity depends.

Market Correspondence

**SPECIAL REPORTS
ON CONDITIONS AT
HOME AND ABROAD**

Prices Firm at Ottawa With Car Situation Improving

Firm prices and a strong demand, with foreign cars continuing to remain very scarce, and the prospect of factory labor troubles on May 1st, were the chief matters of importance to the Ottawa lumber trade during the first two weeks of April. Taken all around the situation seemed to be full of promise and indicated a bright future. Though there may be minor interruptions with business, for a time, it was the expectation of the trade that the late spring and early summer business was going to be good.

Just how good it will be depends on a variety of circumstances, one of which is labor, another the attitude of builders—and still another facilities for shipment. The car shortage should ease up before May 1st, unless there is something in the wind on the part of the American railroads to keep their cars out of Canada. During the early part of April the inception of the dock workers' strike in American Atlantic ports, further tended to intensify an already acute foreign car situation in the Ottawa market.

That Canadian lumbermen are at the present time considerably exercised about the car situation is shown by their action while in attendance at the National Convention at Washington, when Mr. Daniel McLachlin, president of the Canadian Lumbermen's Association, and Mr. Frank Hawkins, secretary of the same body, and other members visited the head of the American car service bureau, pre-

senting the case of the Canadian lumbermen. No promises of improvement were made to the representatives, they being simply told that the Bureau would do the best it could to obtain cars for entry in Canada. Reference was also made during the interview to the congested state of American Atlantic terminals due to the dock workers' strike. The situation so far as the Ottawa shippers was concerned was somewhat relieved by the lumbermen using coal cars to carry shipments of the lower grades of lumber to their American customers.

"We have received word from the American railroads that they are doing their best to straighten things out, and it seems that some measure of relief should come to us before the end of this month," stated Mr. P. C. Walker of Shepard and Morse.

The demand to the local market came principally from the United States and was for practically all grades of lumber. The domestic demand fell off a little indicating that the retailers were pretty well stocked up, and that the stocks they carried had not yet begun to move. Even though the domestic demand slipped back a little it did not tend to cause any feeling of depression in the trade as it was referred to, that there was more lumber being used in building operations in and around Ottawa now than there was at this time last year and that there was every indication that building activity would continue to increase in volume during the summer months.

The condition of the real estate market continued to show that

View of Mills in Sarnia.

BUY THE BEST

Retailers and woodworking establishments who like to get A1 NORWAY and WHITE PINE LUMBER always buy their stocks from us because we can ship them on quick notice. It pays to have the goods, but it pays better to "deliver" them.

We also make a specialty of heavy timbers cut to order any length up to 60 feet from Pine or B. C. Fir.

"Rush Orders Rushed"

Cleveland-Sarnia Sawmills Co., Limited

SARNIA, ONTARIO

B. P. BOLE, Pres. F. H. GOFF, Vice-Pres. E. C. BARRE, Gen. Mgr. W. A. SAURWEIN, Ass't. Mgr.

there was a particularly strong demand for all kinds of houses, either to rent or for sale. As an instance of how Ottawans have been trying to overcome the shortage of houses, 141 building permits, having an estimated value of over \$606,000, were issued during the last six months. In addition to these there were many large commercial permits, such as the Booth Building, Loew's Theatre, etc.

Labor for both the woods operations, the spring drive, and for factory work remained fairly plentiful. Several of the companies have closed up their camp operations and are in readiness for the spring drive, which it is expected will commence around April 15th to 20th. The prospect for successful driving conditions this year was not considered any too bright by several of the companies as it was expected the spring would be long and cold. An estimate of this year's cost of bush operations was not available from any of the companies as they stated their figures would hardly be known to themselves until around June 1st., or perhaps later.

On the outlook as to the increased costs tending to further advance the sale price of lumber one of the leading lumbermen stated "It is not the desire of the lumbering industry generally to unduly advance prices. The figures we are getting to-day are the highest they have ever been, but they have been brought about by sets of conditions—(increased labor and food costs)—which the industry has never had to face before. That briefly tells why the prices charged for lumber are where they are to-day."

From the selling end of most companies the outlook for business was considered good. Production this year while in advance of last, was, it was prophesied, likely to fall considerably short of meeting the present demand. Sawmill labor in keeping with the action of the line pursued by the inside woodworkers, it was expected, would seek an advance in wages. It was intimated in some circles that if a moderate advance was asked for that the application would be given careful consideration with, at least, a good fair chance of being granted.

In the European export situation a big surprise was sprung by the ocean steamship committee, on the receipt of their notices by the trade that they had abolished what is known as the "St. Petersburg Standard" of lumber shipments, which has existed since lumber was first shipped out of Canada and which has been in force and effect since the days of Confederation, if not from a greater date. Henceforth lumber shipments, (for the time being at least) are going to be charged for by the ocean carrying companies on the basis of so much per hundred pounds.

The change over means about a twenty per cent. increase in ocean rates. During the past six years there have been many changes by the carrying companies of the rate per "standard." During the war it was quoted at 300 shillings for carrying approximately 1,980 feet of lumber. Before the war the rate was from thirty-five to forty shillings. The last shipment by the standard rate, out of Ottawa, some time ago, was 250 shillings. A thousand feet of dry lumber it was estimated by the local exporting trade would weigh about 2,500 pounds, or practically put the "standard" on the new basis as weighing about 5,000 pounds or two and one-half tons.

The new rate to local shippers is \$1 per hundred pounds, making the standard run all the way from \$41 to \$50, whereas in pre war years it ran from \$20.50 to \$25 according to the dimension of the stocks that were being carried overseas.

One of the few cheery indications from a Government source that the lumbermen and pulp and paper manufacturers have received since the war began or when newsprint control was first placed in effect in 1916, was the decision of the Supreme Court of Canada, which on Tuesday, April 6th, upheld the case of Price Bros. contesting the validity of the authority constituting the Board of Commerce and questioning its right to fix prices for newsprint paper.

Aside from its effect upon the pulp and paper industry which virtually means, so it was interpreted at Ottawa, the removing of control on price fixing and embargoes being placed on shipments of newsprint paper, it was taken that the authority of the Board of Commerce in placing embargoes had been killed and there was practically no chance of them being imposed by the Government in the future on lumber shipments.

Active Demand and Firm Prices in Montreal

Conditions in Montreal have not changed. There is still a great shortage of lumber, especially spruce which is in heavy requisition at the present time. Hardwood is in great demand, due to the amount which is being exported to the United States. In the opinion of the Montreal wholesalers there is no chance of prices coming down.

B. C. woods are in great demand, but there is a comparatively small amount being shipped east.

Montreal building returns for the first quarter show an immense improvement over the corresponding period in 1919. Thus the total

is \$1,461,237, an increase of \$1,021,135. Every month this year has exhibited a gain, that for March, at \$847,247, an increase of \$619,039. Even at this early period of the season, there is a shortage of material and lumber due in some cases to the impossibility of getting cars. The season promises to be an exceptionally brisk one, and contractors have more work on their books than for several years. The one thing that may cause an interruption to this activity is labor trouble—the men are being urged by outside agitators to consolidate their ranks and to force higher pay.

The steamship companies have made yet another change in the method of doing export lumber business. For a large number of years the rates were based on measurement, the familiar Petrograd standard being the unit of calculation. Now the rates are based on weight, with the exception of deal lumber, which is still based on the Petrograd standard. The rates based on weight are as follows: \$1.20 per 100 lb. being charged for hardwood; \$1.22 per 100 lb. being charged for softwood.

Canadian pulp and paper exports for the month of January reached a total value of \$9,151,206, compared with \$6,885,319 in January 1919, a gain of \$2,265,947. The paper exports during the month included 1,152,508 cwt. of newsprint, valued at \$459,935; 32,761 cwts. of kraft wrapping, valued at \$258,745, and roofing paper valued at \$89,645. Paper and woodpulp exports for the first ten months of the fiscal year reached a total value of \$83,575,178, compared with \$67,403,247 for the corresponding period in 1918, and \$51,923,419 in 1919, a gain of \$16,172,931 over 1919, and of \$31,642,759 in 1918. Exports of unmanufactured woodpulp amounted to \$59,789 cords, valued at \$615,101 in January 1920, compared with 97,915 cords, valued at \$972,129 in January 1919.

Quebec Retailers Raise Delivery Charges

The annual meeting of the Quebec City Retail Lumber Dealers' Association will take place shortly, when officers will be elected for the coming year. During the past year six meetings were held, all of which were profitable and instructive. Every member present took much interest in the discussion of the different questions that were submitted, and among the topics discussed were "Credits," "Own Your Own Home," "Cost of Doing Business," "Labor," "Deliveries," and "Supplying Lumber to the Returned Soldiers at the Wholesale Price, Plus 10 %." Every member was glad to agree to this proposal and do everything possible in order to assist the returned boys in every way.

J. O. Chalifour, secretary of the Association, in writing the "Canada Lumberman," says the members all expect a good season during 1920, although lumber is difficult to buy even at high prices. He thinks there are too many speculating in lumber at the present time.

In regard to credits, the Quebec City Retail Lumber Dealers' Association have accepted the method inaugurated by the retail lumbermen of Toronto, through their bureau of credit. Every member makes a list of his credits which he sends to the secretary, who then forwards a copy of all the lists to each member, who has furnished his own copy. The plan is working out very satisfactorily in the interests of the trade as a whole.

The Quebec City Retail Lumber Dealers' Association state that delivery will be charged from May 1st next at the rate of \$1.00 for a one-horse load and \$1.75 for a two-horse load on delivery in the lower part of the city, and in the upper part a one-horse load delivery will be charged at the rate of \$1.50 and a two-horse load, \$2.50. The increase has been rendered necessary owing to the high cost of labor, horse-feed, maintenance, etc.

Western Sawmill Adds to Electric Equipment

In connection with the rapidly developing business of the Hammond Cedar Mill, at Hammond, B. C., the Western Canada Power Company has just completed the installation of a transformer and wiring to increase the voltage available for use in the mill from 2,300 volts to 12,000 volts. Extensive additions and improvements to the existing plant at the mill are being rushed under the direction of the energetic manager, Mr. Hartnell. An indication of the manner in which the business of the mill is becoming is afforded by the fact that up to a year ago steam power met its requirements. In February, 1919, electric power was installed, the Western Canada Power Company putting in equipment for 2,300 volts. Now that electric power has in turn been found to be inadequate to the demands of the mill, and the same company has just completed improvements raising the voltage to 12,000.

Increase in Wharfage Rates at Montreal

Negotiations regarding the proposed increase in wharfage rates were continued in Montreal at the office of the Harbor Commission, when protests were made against the proposed new rates, which, it was claimed, would come to very much more than the amount originally estimated by the Harbor Board when the new schedule was promulgated. It was argued that instead of a twenty per cent. increase the jump in some cases would be nearer 100 per cent., while the averages would run higher than fifty per cent. Conferences as to this will continue, but the general opinion of the shipping interests involved was that, following the discussions between the shipping men and the Harbor Board, a new schedule would be required. The shipping men took the ground that they were perfectly willing to meet such increases as the necessities of the harbor revenue demanded, but that they were not inclined to agree to an arbitrary schedule which might weigh unduly heavily on some lines of imports, and less heavily on others, while the total amount to be raised under the proposed schedules, as at present, would, they estimated, come to a considerably larger sum than had been expected by the Harbor Board when the Order-in-Council was promulgated.

A statement was made at the close that the conference had been held with regard to the general increase in wharfage rates to be charged on import and export traffic using the wharves, as well as

additional charges on passengers using the Port of Montreal. It was stated that according to the Order-in-Council these new increased rates were to go into effect.

The conference followed a meeting at Ottawa, when a deputation from the Board of Trade was met by Hon. C. C. Ballantyne, Minister of Marine and Fisheries. At this meeting the representatives of the Board of Trade laid their case before the Minister asking that before the new rates went into effect a conference be held to establish the facts of the position. On the strength of their representations, Hon. Mr. Ballantyne undertook to arrange a meeting between shipping interests of Montreal and the Montreal Harbor Board.

Uncle Sam Wants Pulpwood Restrictions Lifted

Within the next week or so, the committee recently appointed by the U. S. Senate, acting upon a resolution introduced by Senator Underwood to investigate the newsprint situation in the United States and open negotiations with the Governments of Quebec and New Brunswick with a view to obtaining the removal of the restrictions of the export of pulpwood cut from Canadian Crown Lands, will meet in Washington. Efforts are being made by representatives of the American paper interests to induce delegations of newspaper publishers from all parts of the United States to visit the capital and tell the committee of the seriousness of the newsprint situation. That this serious situation and the cause of it as the American manufacturer of newsprint sees it may be duly impressed on the American publisher, an active educational campaign is being carried on in all parts of the country. The text of campaign may be briefly stated thus: Newsprint prices in the United States are high, because a large portion of the newsprint used in this country comes from Canada. The Canadian newsprint manufacturers are profiteering at the expense of the American newspaper publisher, because they have nothing to fear from American competition. The strong position of the Canadian manufacturer's is due to the fact that the American Manufacturer's supply of pulpwood in the United States is inadequate and he cannot by reason of the restrictions placed on the export of pulpwood from Canada, obtain a supply from the lands which he leased many years ago from the Canadian Provincial Governments.

Serving Canada's Industries

EVERYWHERE you go you will find National Motor Trucks taking a big part in Canadian Industrial activity—helping Canada build and grow quickly.

You will find them working ceaselessly for transportation companies, contractors, manufacturers, wholesalers and merchants facilitating distribution and speeding up production at minimum cost.

"Nationals" are preferred because of their ability to endure and to deliver peak loads on schedule time. "Nationals" offer absolutely dependable motor truck service. Convince yourself that the "National" is the truck you should buy—that it is long-lived—that it does more hard work at lower cost. Arrange now for a demonstration.

EDGINGS

Ontario

The capital stock of the Elgie & Jarvis Lumber Co., Ltd., Toronto, has been increased from \$40,000 to \$100,000.

The Sterling Bay Lumber Co., of Tenby Bay, Ont., have started sawing operations and are very busy at the present time.

The Pearce Lumber and Planing Mill Co., Marmora, are reported to be considering the sale of their business.

The Ontario Tie, Timber & Construction Co. intend erecting a new sawmill at Timmins which will cost about \$50,000. Work will be started on the new mill early next month.

The capital stock of the Ontario Paper Co., Thorold, has been increased to \$3,500,000 by the creation of 34,900 shares of new stock of \$100 each, of which 25,000 shares shall be preference shares.

The Fort Frances Paper Co. of Fort Frances, Ont., has taken action in the Supreme Court of Ontario similar to that taken by Price Bros., denying the power of the Board of Commerce to regulate prices on newsprint.

Percy Switzer, lumberman, whose parents reside at Gooderham, Ont., was injured recently in a lumber camp near Haileybury and died later in the General Hospital, Toronto, after being an inmate there for several weeks. He was 26 years old and single.

The capital stock of Beatty Bros., Limited, Fergus, has been increased from \$750,000 to \$2,000,000, the increase to consist of 6000 first cumulative 8% preference shares of \$100 each and 7000 cumulative 7% preference shares of \$100 each, and 7000 common shares of \$100 each.

The Ericson Marine & Aircraft, Limited, Toronto, Ont., have been incorporated to manufacture in aeroplanes, hydro-aeroplanes and other vehicles. Capital stock \$250,000. Among the incorporators are F. J. Hughes and L. J. Phelan, solicitors, both of Toronto, Ont.

G. M. Yates has been appointed secretary of the Local Housing Commission at Guelph. The commission has received a large number of applications for dwellings, and it was decided to call for the erection of forty, six-roomed houses; the work to be completed this summer.

The Toronto Woodworkers, Limited, Toronto, Ont., were recently incorporated to manufacture and deal in furniture, cabinets, musical instruments and all kinds of woodenware. Capital stock \$100,000. Among the incorporators are G. H. Lovatt and A. Pickles, students at-law, both of Toronto, Ont.

Malcolm & Hill, Limited, Kitchener, Ont., have been incorporated to manufacture and deal in lumber, furniture, etc. They will also acquire and carry on the business of the D. Hibner Furniture Co., Kitchener, Ont. Capital \$600,000. G. H. Sproat, and C. H. Kempt of Toronto, Ont., are two of the incorporators.

The Parry Sound Forest Products Co. has been granted a provincial charter with a capital stock of \$100,000, and headquarters in Parry Sound, to buy, sell, manufacture and deal in forest and other products. The incorporators include James Ludgate, lumberman, and Robert Lyons, manufacturer, of Parry Sound.

The planing mill of the C. B. Williams Co., Ltd., at 11 St. Albans St., Toronto, was destroyed by fire recently. The loss on building and contents was \$20,000 which was partially covered by insurance. By a hard fight the firemen managed to save the lumber in the yards. The planing mill was a two-storey frame structure and burned like tinder.

The North American Lumber Co., Ltd., which was recently granted a charter, with a capital stock of \$100,000 and headquarters in Toronto, has acquired a license covering fifteen square miles of virgin timber in the neighborhood of Algonquin Park. The limits are estimated to contain over 50,000,000 ft. of timber, and two sawmills are being erected on the property.

It is estimated in prominent pulp, paper and lumber circles that the Ottawa district is shortly to have another large pulp and paper mill, which is to be erected on the banks of the Gatineau River near Chelsea by the Royal Securities Corporation, Limited, Montreal, at a cost of approximately \$1,000,000. It is stated that the corporation will acquire the holdings of the Gilmour and Hughson Lumber Company in that district.

Rideau Timber Products, Ltd., of Ottawa, have been granted a charter with a capital stock of \$100,000 and headquarters in Ottawa, to carry on in all its branches a lumber, timber and pulpwood business, and to manufacture, sell and deal in timber, logs, lumber, wood products, etc. Among the incorporators of the company are Chas. B. Dougherty and Robert Everard of Ottawa, and Guy M. French of Renfrew. It is understood that the new organization is a holding company to take over the B. C. timber limits of the Rideau Lumber Co., Ottawa.

Eastern Canada

Joseph Fiset intends erecting a sawmill at Barraute Que. The mill will be 28 x 60.

Price Bros., Limited, are contemplating the erection of an addition to their sawmill at Batiscau.

The sawmill of M. Tremblay, of Martinville, Que., was recently destroyed by fire. The loss was \$3000.

J. A. Turcotte is erecting a new sawmill at Natagan Station, Abitibi County, Que. The mill will be 1½ stories, 70 x 30.

The sawmills of Phileas Belanger at La Durantaye, Que., was recently destroyed by fire. The loss was \$3000 and the owner will rebuild.

The International Paper Company has signed contracts at Three Rivers for the erection of a large number of dwellings for its employees in that city.

The International Paper Company has signed contracts at Three Rivers for the erection of a large number of dwellings for its employees in that city.

The Slate Products Co. of Canada, Limited, Montreal, P.Q., have been

granted a charter to carry on a general business as manufacturers and dealers in timber, wood and metal and other by-products. Capital stock \$200,000.

The Kipawa Company, Limited, a subsidiary of the Riordon Pulp and Paper Company which has been manufacturing unbleached sulphite pulp since the latter part of December, began recently to turn out the bleached product, and by the first of May expects to have the plant turning out over 100 tons per day.

Wilson, Paterson & Gifford, Limited, Montreal, were recently granted a provincial charter to carry on a general business in the manufacture and sale of lumber, timber, pulp and other wood products. The capital stock is \$1,000,000.

H. Mathieu, Limited, Montreal, P. Q., were recently incorporated to carry on a business in the manufacture of lumber, timber and other wood products. Capital stock \$49,900. H. Mathieu and F. R. Paquet, of Montreal, P. Q., are two of the incorporators.

A federal charter has been granted to W. A. Marshall & Company of Canada, with a capital stock of \$25,000 and headquarters in Montreal, to carry on a wholesale and retail business in wood and fuel of all kinds and also to engage in the timber and lumber line.

The Dominion Store & Office Fixtures, Co., Limited, Montreal, P.Q., were recently incorporated to manufacture and deal in furniture, sash, doors and other wood products. Capital \$10,000. Among the incorporators are B. Shulman and S. A. Shulman, both of Montreal.

The Derby Lumber Co., Limited, Millerton, N. B., were recently granted a provincial charter to carry on a general lumbering, milling and wood manufacturing business. Capital \$49,000. T. C. Creaghan, Newcastle, N. B., and D. A. Manderville, Derby, N.B., were two of the incorporators.

O'Donnell & Morrisette, Limited, Sherbrooke, P.Q., were recently incorporated to manufacture and deal in furniture, musical instruments and all kinds of woodenware. Capital \$99,000. J. F. O'Donnell and N. Chevalier, merchants, both of Sherbrooke, P.Q., are two of the incorporators.

The MacLaren Lumber Co. have donated the sum of \$10,000 towards the erection of a new R. C. church at Buckingham, Que., and have generously offered all the lumber needed at cost price. The edifice will be built this summer and will replace the one destroyed some time ago by fire.

Belanger & Proulx, Limited, Three Rivers, P.Q., have been incorporated to deal in all kinds of wood products. The company will also acquire timber limits. Capital stock \$20,000. P. Bechard, of Montmagny, and J. A. Proulx, of Sainte-Pierre-de-Montmagny, P.Q., are among the incorporators.

"La Compagnie de Roberval," Roberval, P.Q., were recently incorporated to construct and operate shipyards for the manufacture of wooden vessels, boats and canoes. Capital stock \$99,000. Two of the incorporators are Thos. L. Bergeron and Louis H. Brassard, advocate, both of Roberval, P.Q.

McDade's lath mill, only recently erected, and most modernly equipped, was totally destroyed by fire recently at Woodstock, N. B. Owing to the heavy demand, the plant had been working at full capacity day and night. The work of clearing away the ruins was begun today, and the mill will be rebuilt immediately.

The Barry Fibre Co., Incorporated, Cheateau Richer, P.Q., were recently granted a charter to operate saw and paper mills and to carry on a general business in the manufacture of lumber, timber and other forest products. Capital stock \$49,900. R. Barry and G. Barrie, both of Quebec, are two of the incorporators.

Constant Phillips, aged 65, a well-known lumber contractor, living at Greenock, Que., was drowned recently in a brook a little north of Brookfield Station. He left the house to go to the woods near Brookfield, where he was engaged in lumbering, and nothing was seen of him until his body was found in the stream. He is survived by a wife and a grown-up family.

The directors of the St. Maurice Paper Company, Limited, the Canadian subsidiary of the Union Bag and Paper Corporation, with sawmills, limits, and pulp and paper mills in the Province of Quebec, have declared a 10 per cent. stock bonus to shareholders or at the rate of one share of new stock for every ten presently held. Extensions are being proceeded with at the pulp and paper mill at Three Rivers.

A federal housing charter has been granted to the Wolf River Pulp & Paper Co. with a capital stock of \$1,000,000, and headquarters in Montreal. The company is empowered to carry on the business of lumbering and the lumber trade in all its branches, to manufacture and deal in pulp, pulpwood, paper and all other products made of wood or pulp. Among the incorporators are John Wilson Cook, A. A. Magee, T. B. Heney and others.

The Miramichi Lumber Co., of Chatham, N. B., has been supplying the Bathurst Lumber Co. with considerable quantities of pulpwood during the past few weeks owing to the latter organization being threatened with a shortage of supplies. It appears that the Bathurst Lumber Co. contracted for sufficient wood but did not get nearly all that was expected owing to the contractors failing to deliver in consequence of deep snow, and also the failure of the Caraquet Railway to run trains.

A new industry to be launched on the upper St. John River is the Notre Dame Lumber Co., of which J. M. Stevens, of Edmundston, is secretary. A sawmill will be built on the old Crocket mill site at Kennedy Island near Clair and St. Francis. It is some fourteen years since there was a mill there and the new plant will take of a large portion of the lumber cut on the Canadian side on the upper St. John River in both New Brunswick and Quebec. The company have asked the New Brunswick legislature for the privilege of placing piers and booms in the St. John River.

The Quebec & Saguenay Pulp Company's mill at Peribonka, Que., is now being operated by James A. Outtersen, who is a well-known American pulp and paper manufacturer. The mill is situated four miles from the mouth of Little Peribonka River, which empties into the north side of Lake St. John. Thirty tons of groundwood pulp is the daily capacity of the plant and extensive woodland holdings belonging to the company lie to the north of the mill. The manufactured pulp is at present transported across Lake St. John to Roberval in the summer time, but it is expected that the Canadian National Railway will extend its tracks past the mill this summer so that there will be direct rail transportation.

TORONTO HARDWOOD PRICES

The prices given below are for carloads f.o.b. Toronto, from wholesalers to retailers, and are based on a good percentage of long lengths and good widths, without any wide stock having been sorted out. War tax of seven and half per cent. on imported woods, and also the prevailing rate of exchange paid by purchaser.

Name the five best
engines in the world and in
most of them, you will find our
metals in the bearings.
Engine builders appreciate the impor-
tance of using a babbitt that must not fail;
we fully realize that importance—that's why we
place quality above price and every other con-
sideration. *There is no speed too high, no
pressure too heavy, no impact too
severe, for Syracuse Babbitts.*

United American
Metals Corp'n

BROOKLYN, New York

Let us help you determine what
babbitt is best adapted to
the requirements of
your machinery.

The world-famous
Winton Engine

SYRACUSE
BABBITTS

QUESTION NO. 8

*What difference does it
make to a bearing if the
babbitt is not absolutely
homogeneous?*

ANSWER

A non-homogeneous
metal is one in which
the ingredients are not
unified, and such parts
of the bearing where
the antimony or cop-
per predominate, are
very liable to score the
shaft. In alloying

SYRACUSE
BABBITTS

The metals are so abso-
lutely unified that every
grain is identical, phy-
sically and chemically,
with every other grain.

Surely it's worth the little
difference in price to know
the bearings in your ma-
chinery are safe and de-
pendable.

Invincible Hewers of Wood

Huther Brothers Saws stand supreme in their field. So complete is this wonderful line evolved from fifty years "knowing how" that we can offer

A Circular Saw for Any Kind of Woodworking

no matter whether it be a Mitre Saw, a Dado Head for cutting perfect grooves with or across the grain, Band Saws, Solid Tooth Circular Saws, Lock Corner Cutters, or any one of the other numerous varieties in our line.

Our catalogue showing this complete line will be highly valuable to you as it will acquaint you with many saws that will increase your production and bring down your overhead cost.

FIRE BRICK

We make several brands of fire brick made by every known process of manufacture from a selection of various high grade Pennsylvania clays. This enables us to furnish the best adapted fire brick for your boilers, dutch ovens, refuse burners, kilns, etc.

We specialize in fire brick for power plants and if you will advise us whether your boilers are hand fired or stoker fired and kind of fuel used we can then give you the proper brick for your work.

We carry a large stock of our different brands in various sizes and shapes in our Hamilton warehouse, which enables us to ship at once.

We manufacture the following well-known brands:

**"Elkco Special," "Elk Steel,"
"St. Marys," "Keystone" and "Rotex"**

"GRIPOLY"

The Belt With
a Perfect Grip
and a
Stretchless
Texture

"GRIPOLY"

The Waterproof
Belting
With Edges
that
Cannot Fray

How "Gripoly" Reduces Transmission Costs

By its combined qualities of durability, tensile strength, gripping power and proof against all destructive agencies, "Gripoly" can be said to come as near to a perfect belting for all transmission purposes as it is possible to manufacture.

"GRIPOLY" is British made and is composed of 85 per cent. pure Camel Hair and 15 per cent. long Staple Cotton solidly woven to yield a tremendous strength, and to resist the severest strain. Its edges are triple twisted, and are absolutely indestructible, defying the friction of shifters, guide forks, or flange pulleys.

"GRIPOLY" is impervious to all such agencies as temperature changes, water, acid, steam, oil, etc.

The unvarying and continuous service of "Gripoly" belting eliminates transmission troubles. The fact that it is stretchless, means no loss of power, and its remarkable durability under all conditions of strain, accelerated speed and rough usage makes "Gripoly" the right belt in the right place for all Lumber Mills. On your pulleys "Gripoly" will prevent costly breakdowns and stoppages, will ensure the utmost supply of power, day in and day out, and reduce your overhead expenses to a minimum on belting.

Tough as a Tire Tread— This Hose Cover

IN mines, quarries, tunnel work, ship-yards and structural steel work, the tough cover on Goodyear Air Drill Hose and Goodyear Pneumatic Tool Hose has resulted in more work and a lowering of hose cost.

The life of hose in this work depends about 75% on the cover. Dragged over rock and ore and steel girders, tramped on and run over, it takes a tough and well-designed hose to give any length of service.

We have records of Goodyear Air Drill Hose in constant service for 18 months to 2 years.

The cover of white rubber is as tough as a tire tread. It is extra thick. It wears long, even under rough handling.

To balance such a good cover is a specially developed, oil-resisting inner tube; and fabric of extra strength.

So good are Goodyear Pneumatic Tool Hose and Goodyear Air Drill Hose that five-ply is found as satisfactory as six or seven-ply of old-style hose.

The thoroughness with which Goodyear Air Drill and Pneumatic Tool Hose has been designed and built, is paralleled in every kind of Goodyear Industrial Hose. The problems of each industry have been studied carefully. The solution to those problems has been worked out in the Goodyear laboratories. The Goodyear Industrial Hose man has a mighty interesting story to tell to industrial executives. No obligation on your part if you have him call. Just phone, wire or write the nearest branch.

Production Paramount

"The Invariable Choice of the Man Who Knows."

Type C-1 Moulder

This machine has made some wonderful records both for quantity and quality of production.

It is designed primarily to make mouldings on a large scale, yet in a smaller mill it can be economically used as moulder, matcher and surfacer.

The vibrationless construction and the extra efficient heads combine to give stock a finish which cannot be improved by a sander. Rates of feed up to 150 feet per minute.

We shall be glad to send you details of this "3 in 1" machine. Free and without obligation to you. Send in your request at once.

DUPLEX TRUCKS

BUILT FOR BUSINESS

Why The Duplex Limited is Winning Enthusiastic Approval All Over America

WITHOUT question the remarkable success of the Duplex Limited is due to the confidence that truck users all over America have in the Duplex Truck Company as builders of trucks that a business man can consider an investment in practical trucking efficiency.

What does the steady, persistent growth of the Duplex Truck Company signify as regards this Duplex Limited?

For one thing it means that the Limited is designed and built by a company that is known to be successful—a company that is famous for building good trucks.

Medium Capacity—Two Wheel Drive—Complete Electrical Equipment—Pneumatic Tired—High Speed—it is a wonderful truck for general business hauling.

4 Cylinder, enclosed type motor—water cooled—cast enbloc—Bore 4". Stroke 5½". 3 Point Suspension. Pneumatic Cord tires. 145" Wheel Base. Electric Lighting and Starting, Equipped with Windshield, Ammeter; Boyce Motometer; Speedometer; Electric Horn; Tools; Jacks; Rim Wrench; Front Fenders; Alemite High Pressure Lubricating System; Driver's Seat without extra charge.

Talk to the Duplex dealer in your vicinity. Find out for yourself why the Duplex Limited already is known as a very safe investment for a business man.

DUPLEX
FOR BUSINESS

Wherever Logs Are Hauled The Duplex 4-Wheel Drive Hauls Them Better and Cheaper

AS the first link in the transportation of lumber in the raw, the Duplex 4-Wheel Drive has been pre-eminent in the industry ever since trucks have been used for logging.

The Duplex has been preferred from the beginning, first because it is the original and the best exponent of the 4-Wheel-Drive principle, and further because conditions under which logs are transported have not been practicable for rear-wheel-drive trucks.

The Duplex pulls and applies power on all four wheels, thus exerting four times the pulling power of any rear wheel drive truck of equal capacity.

By means of its "all-wheel" pull, this four-wheel drive overcomes the inertia of dead weight more easily,

with less strain in starting; it pulls more economically on the level and more dependably where roads are uneven or where they do not exist at all.

Moreover, the Duplex clearance is 15½ inches as against the conventional 9 inch clearance of other trucks; and its gear housings are above, not under the axles.

Only a lumberman can realize what a superior feature this is in clearing ruts, stumps and stones that would stall the ordinary truck even if it could get the traction.

Buy your truck on the surety of dependable experience in the logging industry over a period of years.

The Duplex dealer can show you facts that will prove beyond doubt why the Duplex 4-Wheel Drive is a better investment.

Duplex Truck Company
Lansing • Michigan

One of the Oldest and Most Successful Truck Companies in America

Packards in the box manufacturing industry. Accurately kept cost records prove the advantage of a Packard over the assembled truck—not only in the amount of work it will do, but in the cost of doing that work.

Does the Lumber Dealer Really Get Economical Transportation

WITH the ever increasing length of his trucking hauls and the necessity for running his trucks on schedule time, the farsighted lumber dealer is beginning to question the apparent economies in buying trucks on a price basis.

He finds on adopting an accurate truck cost system that the truck built to meet an arbitrary price soon eats up the initial saving—in upkeep and repairs alone—when compared with the truck built to give him a dollar's worth of transportation for every dollar invested.

The following National Stand-

ard Truck Cost System facts on the performance of over 1700 Packard Trucks in 1919 have a *vital significance* for the truck user.

An average saving in gasoline of 10 per cent—due to greater efficiency in operation with the aid of the National Standard System.

The National Standard System used in connection with Packard trucks has shown it possible to reduce cost per ton mile.

Truck owners who have used the System for a year or more, and have compared the Packard with other trucks, are *standardizing* on Packard.

The driver finds the Packard easier all around to handle.

Less vibration because of the smooth-running Packard engine, the construction of the worm drive, and the placing of 85 to 95 per cent of the live load on the rear axle.

Easier handling on the hills, owing to Packard high tractive force on the road and four-speed transmission graded up by regular steps.

The lumber dealer who is interested in increasing his profits by reducing his transportation costs, will see the significance of these facts when applied to his own business.

“Ask the Man Who Owns One”

PACKARD MOTOR CAR COMPANY, Detroit

The G. Walter Green Co., Limited

**Manufacturers of
Saw, Shingle, Lath Mill and
General Machinery**

This cut represents our No. 2 Bolter, which is specially designed for cutting up small round timber into lath bolts, broom handles, pickets, short lumber or, in fact, anything that could be manufactured from small cheap material.

The machine is made quite rigid, the mandrel being 1 11-16" steel, the drive pulley 9 x 8. On our standard machine we supply a 24" saw. The carriage, which is automatic, is driven by a positive friction feed, and can be controlled by hand the same as a saw mill.

We also build this bolter with lath mill attached. This machine is known as our No. 2 combined Lath Mill and Bolter.

Would You Spend \$575 to Save \$2,000?

Last Fall a certain lumber concern in Ontario purchased a small 10 H.P. Double Drum Belt Driven Hoist from us for handling logs. This machine cost them \$550, plus \$25, freight, total \$575. They operated this small Hoist by a belt from a gasoline Engine, the whole making a light, compact, portable outfit, easily moved from place to place.

They were able to work this outfit in the coldest weather, and found that it did the work of three or four teams.

As it required only one man to operate the Hoist, it is easy to figure the daily saving effected by the use of this machine. In other words, compare the wages and board of one man and the cost of a little gasoline with the wages and board of four drivers and the feed and upkeep of eight horses.

This machine handled up to one thousand logs per day.

We make these machines for either Steam or Gasoline Power, and in 7 sizes, one of which should be just right for your use.

Marsh Engineering Works, Limited, Belleville, Ont.

ESTABLISHED 1846

Sales Agents: Mussens, Ltd., Montreal, Toronto, Winnipeg & Vancouver.

GOODHUE BELTING

For

Saw and Planing Mills

In a Goodhue Belt you get only the best leather with the stretch taken out of it. A Goodhue Belt will always run evenly and "clings" to the pulley transmitting 100% of your power

For the wet places in the mill we have a special waterproof leather belt—"Acme." Other Goodhue Belts are "Extra" and "Standard" recommended according to the conditions under which the belt has to run.

Goodhue Belts stretch less than any other belt by 15 to 25 per cent.

DISSTON-SAWS

THE BEST KNOWN SAW IN THE WORLD

Each year finds a greater number of leading mills using Disston Saws exclusively. Mill operators know that the success of their mill—the quality and quantity of lumber they turn out—depends on the saw they use.

It is natural, therefore, for them to choose Disston Saws—the acknowledged standard in quality for 80 years.

Graton & Knight

Standardized Series
Leather Belting

Tanned by us for belting use

A Forty-Seven Year Belt

In the year 1872 a 24-inch G & K belt was placed on a waterwheel drive in a woolen mill in Pawtucket, R.I. For 33 years it did its work well. In 1903, the Plant was shut down and was not re-opened until 1907, when the Central Falls Mazda Lamp Division bought the property. Upon inspection, the wheel pit and part of the belt were covered with rubbish. After cleaning out the pit, they turned on the power. The belt picked up its load and has been carrying it ever since. This forty-seven year leather belt is proof positive of the quality of Graton & Knight tannage of leather. In 1872, as now, Graton & Knight were making the right belt for the work to be done.

Waterous

Kendall Nigger

The "WATEROUS KENDALL NIGGER" overcomes the greatest drawback experienced in the ordinary steam nigger—the chance of accident unless operated by an expert.

Where the carriage is of medium weight, unless in the hands of an experienced man, the danger of wrecking the carriage is especially great.

The "WATEROUS KENDALL NIGGER" is practically accident-proof. While it possesses both the speed and power of the ordinary Steam Nigger, it is so designed that a green operator can do quick and effective work without endangering the carriage in any way.

By attaching the Nigger Bar to one cylinder only, one motion of the operating lever turns the log and a quite distinct and separate motion is required to load it.

The stroke of the cylinder controlling the loading motion is made very short and thus further precludes the possibility of a serious mishap.

The Kendall Nigger is constructed to be powerful and rapid in action. The cylinders are 10 in. and 8 in. in diameter, pistons are steam cushioned at both ends of stroke, valves are adjustable to permit increase or decrease of operating speed without affecting the power in the machine.

Nigger Bar is of wrought iron, dogs are extra wide, top dog is winged, a steel roller is supplied. No floor plate is necessary. All lever and crank connections are made short and direct, so that the machine gives instant response to the movements of the sawyer's lever.

A great many of the Niggers are already in use in mills, where speed and accuracy on the log deck are essential, but where a medium weight carriage is operated. If your conditions are similar the WATEROUS KENDALL NIGGER will give unequalled satisfaction.

Ask for details and descriptive catalog No. 123

GARLOCK-WALKER'S List of Wood Working Machinery in Stock

Manufactured by

American Wood Working Machinery Co.

If you scan any Second Hand Machinery lists it is seldom you will find an "AMERICAN" machine on it, which is the finest kind of recommendation for the "AMERICAN" line.

THE GARLOCK-WALKER MACHINERY COMPANY have a few in their stock rooms as listed below. They are lucky to have them and you will be lucky to get them.

It is hard for us to make reasonable delivery on new machines these days. So if you want an "AMERICAN" machine of the type listed below don't be afraid to purchase it of GARLOCK-WALKER.

- 1—AMERICAN FIG. 640, FOUR SIDED BOSS TIMBER SIZER, capacity 30" wide, 20" thick, 8 feed rolls, straight knives on all heads, only three years old, good as new.
- 1—AMERICAN No. 229, FIG. 660, 9 x 6 HARDWOOD FLOORING MACHINE, equipped with six knife round top and bottom heads, knife setting and jointing attachments, thoroughly overhauled, in first class condition.
- 1—AMERICAN No. 229, FIG. 660, 9 x 6 HARDWOOD FLOORING MACHINE, same as above.
- 1—AMERICAN FIG. 8442, No. 26, 10" x 4" FOUR SIDED FAST FEED OUTSIDE MOULDER, with slip on and off top and bottom heads, latest type machine, complete, overhauled and in A1 condition.
- 1—AMERICAN FIG. 8442, No. 26, 10" x 4" FOUR SIDED FAST FEED OUTSIDE MOULDER, same as above.
- 1—AMERICAN FIG. 8442, No. 26, 10" x 4" FOUR SIDED FAST FEED OUTSIDE MOULDER, same as above.
- 1—AMERICAN FIG. 8412, No. 22, 10" x 4" FOUR SIDED OUTSIDE MOULDER, in first class condition.
- 1—AMERICAN FIG. 8521, No. 5, 8" x 4" HOUSTON FOUR SIDED OUTSIDE MOULDER, overhauled and in A1 condition.
- 1—AMERICAN FIG. 8601, 6" x 4", FOUR SIDED OUTSIDE MOULDER, new.
- 1—AMERICAN FIG. 5014, No. 111, 54" BALL BEARING BAND RESAW, carrying blades up to 7" wide, capacity 30" vertically using extended rolls, 22" without extended rolls; from 1/8" to 20" horizontally, will centre split a 16" timber; cut a veneer from 12" stock, rates of feed from 32 to 192 feet per minute; only three years old; in first class condition.
- 1—AMERICAN FIG. 5859, No. 3 DOUBLE CUT-OFF SAW, capacity between saws 8" to 6' 9", 4" thick, 30" wide, equipped with two 16' saws and power adjustment to movable table; new machine.
- 1—AMERICAN FIG. 5610, No. 25 EDGING AND RIPPING SAW, complete with countershaft; new machine.
- 1—AMERICAN FIG. 541, No. 4 CIRCULAR RESAW, with 24" saw, in good working order.

- 1—AMERICAN FIG. 5701, No. 2 SELF-FEED CIRCULAR RIP SAW, capacity 25" wide, 8" thick, equipped with 14" saw and countershaft.
- 1—AMERICAN FIG. 604, HEAVY SWING SAW, right hand to hang from ceiling, equipped with 48" saw and shield, almost new. 84 feet of ROLLER TABLE for use with above SWING SAW.
- 1—AMERICAN FIG. 618, No. 7 1/2 COMBINATION SAW BENCH, with full set of gauges, without dado head, in first class condition.
- 1—AMERICAN FIG. 6390, No. 1 DOUBLE ARBOR UNIVERSAL SAW BENCH, with tilting table, full set of rip, cross-cut and mitre gauges, including one 16" rip saw and one 16" cut-off saw, countershaft, in A1 condition.
- 1—AMERICAN FIG. 6390, No. 1 DOUBLE ARBOR UNIVERSAL SAW BENCH, same as above.
- 1—AMERICAN FIG. 575, No. 2 HAND FEED RIP SAW, with countershaft.
- 1—AMERICAN FIG. 6312, CROSS-CUT SAW BENCH, movable saw operated by foot treadle, capacity 10 1/2" x 2 1/2", particularly adapted for cutting off crating stock; in A1 condition.
- 1—AMERICAN FIG. 514, 36" BALL BEARING BAND SAW, with wire screen guards for top and bottom wheels; in first class condition.
- 1—AMERICAN FIG. 824, 24" BUZZ PLANER, fitted with square cylinder, power feed attachment and countershaft; in A1 condition.
- 1—AMERICAN FIG. 937, No. 1 SINGLE SPINDLE SHAPER, with plain countershaft; in first class condition.
- 1—AMERICAN FIG. 1110, No. 6 DOUBLE DISC SANDER, 36" diameter discs; in first class condition.
- 1—AMERICAN FIG. 1126, No. 9 UNIVERSAL KNIFE GRINDER, capacity for knives 31" long, two sided knife bar, one side fitted with clamps for holding thin high speed knives, one side slotted and fitted with bolts for holding ordinary thick knives; in A1 condition.
- 1—AMERICAN FIG. 1127, No. 9 UNIVERSAL KNIFE GRINDER, same as above.
- 1—AMERICAN FIG. 1145, No. 2 DOUBLE END EMERY GRINDER, bench type, complete with countershaft; in A1 condition.

In addition to the machines listed above, we have a complete line of high grade new and used machinery for any and all purposes.

We solicit your enquiries.

He Knows

***The Quality of the
Product is Known
by the name***

For over fifty years G. A. Grier & Son have been supplying the trade with lumber of known quality. It is the intention of this firm to be always identified with the marketing of nothing but the best in lumber and timber, both as to the quality of the wood and as to the service given our patrons in the handling. See us for—

**PINE—SPRUCE
HEMLOCK — HARDWOODS
B.C. LUMBER and TIMBER**

For rush orders—we make a specialty of mixed carloads from our Montreal storage yards, where we always carry a stock of all local woods as well as Pacific Coast lumber.

Think it Over

Canada's building programme for 1920 according to authentic estimated reports will total \$300,000,000.
Think it over.

Douglas Fir will play a most important part in this building activity.
Think it over.

Douglas Fir and Red Cedar Shingles are "safe bets" for 1920, but supply is low and demand high.
Think it over.

When you have thought it over, we want you to wire us your enquiries.

A Page from Johnny's Diary

After dinner last Saturday, Sam Snooks cum over tu our hous and askt me tu cum for a wok, and we went down to see where they were fillin in the Bay to mak that Harbor improvement we reed about in the papurs, and we got down to the foot of Spadina Avenue where there is a lot of lumber piled round and the railroad traks run in among the lumber piles and Sam sed say Jack I thot there wusnt any dry lumber the way foks tok, and I sed well they ought to cum down here, lets go over to that place over there with the sign up in front saying The Gall Lumber Company Hardwood Lumber, so we went over and as it wus Saturday afternoon there wus only the engineer there that runs the dry kilns that dries the lumber, and we askt him about the diffrent kinds of lumber we saw in big piles, and we saw big piles of dry lumber what he told us were—well there were a lot of bords he called plain Oak and quartered Oak, sum of it as wide as nineteen inches, and then there was White-wood and Bay Poplar and Chestnut, and if I hadnt rit sum of it down I goodnt of remembered, there was Mahogany, Walnut—oh diffrent kinds of Walnut, Circasian, Black and Brazilian, then Sap Gum and Red Gum, but you coodnt chew it like Gum, but only chew about the price nowadays.

Then there wus Soft Elm and Rock Elm, and we askt him if there wus any slippry Elm but he sed not he didnt think so, but there wus Maple cut from trees like they get the Maple Sugar from and Birch like they make chairs and furniture out of, and Basswood and Beech—Say dont you like Beech Nut Butter on your bred? Oh boy!

Then there wus Soft Maple and Cherry and Butternut. Gosh amighty! I never new there wus so many kinds of lumber, and Sam sed he never new before eether. By hek, there wus White Ash and Black Ash and all kinds of what they call Hardwood lumber that they load out every day by the carloads, and Oh Gee they had two big places they call dry kilns where they kiln dry lumber if people want it dun by the carloads. It goes in one end on big trucks and they shoot steam into it and then hot air and it cums out the uthur end all dry and is loaded into cars. Oh Gosh, Ill tell the world when I hear anybody say they cant get dry lumber to just go to the Gall Lumber Company at the Foot of Spadina Avenue, Toronto, or just telephone them, their number the Engineer told me was Adelaide 148.

Yours Jack.

True Blue Service

WE are constantly striving to give our customers the greatest possible service—as our big Service Yard at Logansport indicates.

Furthermore, we sell only high quality lumber—for quality products are always best.

This service and quality are very real. They must be, because it is with them that we assure satisfaction. And every single one of our customers must be satisfied.

You will find it to your advantage to buy hardwood backed up by such service and of such quality that satisfaction is a foregone conclusion. And it is—when you buy of us.

Fort Coloung, March 6, 1920.

MacLean Machine Works,
Campbell's Bay, Que.

Dear Sirs:—

I am well satisfied with the feed-works I bought from you. I have used it for three seasons and I find it perfectly satisfactory. It runs my carriage steady at slow or fast feed.

I would not use any other.

Yours truly,

A. PROUDFOOT.

Mr. Proudfoot replaced a steam feed with one of our machines and states he saved enough wood in three months to pay for machine.

FULL PARTICULARS ON REQUEST.

PROVISIONS for the Camp

THE Lumberman makes no more important purchases than the provisions of his camp. It is therefore highly important that he should be well posted on many facts concerning the various foodstuffs in regard to prices, probable shortages, etc.

It is only in this way that orders can be placed intelligently and with the greatest economy.

To follow the Food Markets so closely in order to get this information entails a great amount of time—more, in fact, than the busy lumberman can afford.

It is to supply the Lumberman with this desired information that we prepare each month a special Letter and Price List. This, we send to buyers throughout the country to whom it proves invaluable.

You, too, may benefit by this service by simply sending in a request. It will cost you nothing and will surely effect a saving in your provision account.

Where requested we shall be pleased to quote specially on Requisitions, giving market conditions or sending samples.

Our fifty years' experience in this line enables us to assure you of the most efficient service.

Let us hear from you.

Words Words Words

¶ "Let me write the copy and my office boy can make the advertising contracts." This remark is attributed to Mr. C. W. Post, of Grape Nuts fame. That he carried this fundamental truth into his own business is evidenced by the fact that in a remarkably short time he made known to many millions of people his own products.

¶ Carlyle has very aptly said, "Words, right words, bring mind in harmony with mind." Therefore a desirable and harmonious state of mind can only be created by forcible copy and effective illustration.

¶ Your copy is the brain of your advertising space. Are you getting the most out of it?

¶ If you think not, we will place at your disposal the services of men skilled in the production of strong, forcible copy.

OUR SERVICE DEPARTMENT

is organized for the benefit of our advertisers, is fully equipped to handle the writing of your copy, the preparation of any art work you may require, and the making of any necessary engravings. The staff is fully experienced, and many national advertisers have their advertisements prepared by our Service Department. No charge is made for writing copy.

¶ If you feel your copy could be improved and made more attractive, just send on the data you think would be helpful to us. We will then prepare copy suggestions for your approval.

¶ Why not take advantage of the service we offer?

BLIND BUYERS

A Straightforward Talk on Buying Babbitts

"Blind Buyers" is a term which we believe it is permissible to use to emphasize the lack of insight of some buyers when purchasing Babbitt metals. No buyer knows all about every product used in his plant, and he cannot be expected to know all about Babbitt metals. For this reason, although he may order most of his requirements efficiently, he may actually be "blind" in connection with his Babbitt purchases, and will be thankful to us for pointing it out to him.

"**S**CRAP or virgin metals"—that is the question. Whether to buy the cheap-priced so-called Babbitt metals—mixed from remelted scrap, *or*

To buy a Babbitt, alloyed from prime virgin metals, at a bit more per pound, which has honesty in back of it—in the very fact that it *is* what it purports to be.

This is the manner in which a buyer *should* argue with himself when about to buy Babbitt. However, few buyers consider what is put into a Babbitt. The average buyer figures that "metal is metal" and, to him, the only distinction is that of price per pound. He might be surprised or even skeptical when we tell him that most of the

metal makers use all the scrap they can in manufacturing Babbitt Metal Alloys.

Buyers usually argue that the Babbitt they are using is doing the work required of it. This is not sound argument. **Low grade material cannot produce a high-grade product.** It will not have equal wearing ability. You cannot afford to pass by the better Babbitts which do not have to be replaced so often.

A cent or two or three added to the cost per pound of your bearings makes little difference in the buying cost, but will save you that slight additional cost many times over on the increased production of your machinery due to the lesser number of shut-downs for re-babbling, besides saving the labor expense.

Longer Wear per Bearing Means Lower Cost per Year

A trial case will convince you that you can economize best by using the world-renowned

STANLEY PROCESS

DISSTON-SAWS

THE BEST KNOWN SAW IN
THE WORLD

Each year finds a greater number of
 leading mills using Disston Saws ex-
 clusively. Mill operators know that
 the success of their mill—the quality
 and quantity of lumber they turn out
 —depends on the saw they use.

It is natural, therefore, for them to
 choose Disston Saws—the acknow-
 ledged standard in quality for 80 years.

Single copies 15 cents.

"The Canada Lumberman and Woodworker" is published in the interest of, and reaches regularly, persons engaged in the lumber, woodworking and allied industries in every part of Canada. It aims at giving full and timely information on all subjects touching these interests, and invites free discussion by its readers.

Advertisers will receive careful attention and liberal treatment. For manufacturing and supply firms wishing to bring their goods to the attention of owners and operators of saw and planing mills, woodworking factories, pulp mills, etc., "The Canada Lumberman and Woodworker" is undoubtedly the most direct and profitable advertising medium. Special attention is directed to the "Wanted" and "For Sale" advertisements.

Authorized by the Postmaster-General for Canada, for transmission as second-class matter.

Entered as second-class matter July 18th, 1914, at the Postoffice, at Buffalo, N. Y., under the Act of Congress of March 3rd, 1879.

Dispelling Illusions of Forest Assets

Human nature the world over is peculiar in its conceptions and tendencies. There is nothing more interesting than the study of mankind, and nothing so deceptive as one's isolated view of self. For any individual to pick up his daily paper and read of accidents, deaths, plagues and fires that are befalling others and imagine that he, his family and his interests are immune and that whatever unhappiness and disaster, bereavement and illfortune may swoop upon others, no such a visitation will ever come to him and his, is sheer folly. It is a sense of false security, a short-sighted egotism or a blind, unreasoning attitude that frequently drives otherwise sane and thoughtful men into an early grave or bankruptcy or causes them to become wards of the state. It is the same way in connection with matters of health. While disease and weakness may seize others, some are convinced that they are so unusually strong and active that their very appearance or superior mould is a sort of prophylactic against any constitutional trouble or physical downfall.

Again, there is the business man who imagines that he will always be a leader in the race, the merchant who thinks he is going to stay for decades at the forefront of his competitors, the producer who thinks he can hold the field forever and last, but not least, the lumberman and also the consumer of forest products who assumes that the supply of wood goods will never end; that the sources are apparently inexhaustible. No shortage has been experienced in the past and none is likely to be encountered in the future! It is only when our health is gone that we appreciate what proper care and exercise might have done to safeguard and conserve it.

We have put too much verbal stress and emphasis on our natural resources and this is especially true in connection with Canada's forests. The populace should listen to men who have made a

lifelong study of the situation; men who are not alarmists or theorists, who read aright the signs of the times and make logical observations concerning the future.

Dr. Howe, Acting Dean of the Faculty of Forestry, Toronto University, is an authority in his profession and has spoken before representative business assemblies, boards of trade, chambers of commerce, bankers, financiers and others on the forest resources of Canada. A recent address delivered by him and published in the last edition of the "Canada Lumberman" is worthy of more than passing interest. He makes it very clear that the day of cheap lumber and cheap paper is past and that values will likely increase rather than decrease. It will cost more in the future than in the past to build homes, buy furniture and purchase vehicles, pianos, phonographs and other creations in which wood plays a prominent part. The highest note struck is that where Dr. Howe points out the urgent and specific need for a reinvestment of a portion of our forest revenues into the public domain by establishing large nurseries and planting with trees much of the barren and non-agricultural lands of Canada. The promotion of new growth must be encouraged if readily accessible forests are to be made continuously productive, and if Canadians would maintain the perpetuity and prosperity of the lumber and pulpwood interests which stand third in the great national output and development of the Dominion.

Practical progressive forestry is to-day one of the liveliest propositions that is engaging the attention of pulp and paper companies, and there is no movement worthy of greater encouragement or more hearty support on the part of federal and provincial governments, county councils and even township bodies. To employ a colloquial expression, is it not high time that Canadians should cease "kidding themselves" about the alleged inexhaustibility of our timber wealth and the delusion of a net annual forest growth.

Talking to the Public Wisely and Well

The retail lumberman is not generally a good advertiser. He believes his product is a staple one and that everybody knows about it. There are no changing styles, color schemes, new materials or anything of the character which call for a seasonable appeal as in many other lines of merchandise. Lumber is lumber, lath is lath, shingles are shingles, doors are doors. The selection may be widened somewhat and the prices go up, but beyond this there is not a great deal that can be said one way or the other in connection with his business. This specious argument has been in vogue for a long time and now would be an opportune time for the alert yardman to do something in changing the viewpoint of the public, remembering that people are interested in something more than the mere goods. They would like to know what he has to offer, what his service affords, what his delivery facilities are, what he can present in the way of estimates, plans and practical suggestions in the building line, etc. He might even go further and tell just why lumber of all kinds is high to-day—not as a justification for its exalted value or in defence of his own business, but as a helpful, and timely talk. This sort of information is particularly seasonable and if well presented is a means of educating the public on a point regarding which a number of complaints are heard. The most common error is that generalities are too plentiful, and no one seems to want to go to the trouble and take the public into confidence.

The man who is frank and above board in his activities and relationships, is the one who reaps just measure and esteem in the long run. He invites trust and respect which, in other words, means business. He establishes a reputation and standing for fair, open dealing, and taking his customers into his confidence is a good move at a time when people in most lines, while not kicking unreasonably against high prices, like to know the when, where, why of the present upward trend. Such particulars may not result in lower values, but in a measure they make the price graduation seem easier.

We believe that the retail lumberman who is following such a course is the one who is inviting patronage rather than the side-steper who indolently says, "You know everything is up now on ac-

count of the war and the scarcity of supplies." This rejoinder is too vague and empty in character. People want a few basic facts and concrete reasons rather than meaningless observations. Ordinary patrons like to be instructed and he, who is using his advertising space this end at the present time is benefiting himself and conferring a favor on many who never see a trade journal and naturally look to their tradesmen in each line for any enlightenment that comes to them. They prefer to deal with a man in whom they have implicit trust and feel that he is protecting their interests as well as his own through the present period of stress and uncertainty.

Editorial Short Lengths

Have you donned overalls? No reason, now why some of those who have, should not go to work in a lumber yard or around a saw-mill. Greater production is the cry and call of the hour. Are you doing your part—in overalls of course?

* * *

Anyone, who cares at one fell swoop to make a name for himself as a prophet, should go into the predictive business and tell builders, retail lumber dealers and others just what price No. 1 and No. 2 white pine lath will command about July 1st.

* * *

If there is one live section of the Ontario Retail Lumber Dealers' Association, it is that of District No. 6—better known as the Orangeville branch. These gatherings are held every three months and many matters of mutual interest discussed. The result is that all the members are not only well acquainted with one another personally but also with the trend of the trade situation, retailing problems that crop up from time to time, the best manner of keeping their business well in hand, furnishing better service and carrying representative stocks.

* * *

The next issue of the "Canada Lumberman" will contain an illustrated and interesting contribution on the expansion of the railway tie industry in Canada. Much timely information will be presented on the subject. The articles in the April 15th number on the demand for cedar poles being revived and the probable price which lath will command this season aroused much favorable comment. In succeeding numbers various phases of forest products development will be discussed in able articles, including posts, piling, pulpwood, timbers, hardwood flooring, shingle production and other allied lines.

* * *

The extraction of turpentine from Douglas fir, a new industry in forest products, has been established on Cortez Island by a number of ranchers, and a company is being organized to actively develop the business. A royalty of one dollar per barrel is asked by owners of timber and it is estimated that about eight barrels of pitch is the average production per acre. No tree smaller than ten inches in diameter is tapped and some of the larger trees yield great returns, one producing 48 gallons at one tapping. About two-thirds of a gallon of high grade turpentine is obtained from a gallon of sap, the residue being commercially marketable.

* * *

A call for wholesale and retail lumbermen to band together to remedy the abnormal conditions in the lumber trade was contained in a resolution adopted by the Retail Lumbermen's Association of Philadelphia recently which is as follows and will be read with interest:

"Whereas, These conditions have been caused by decreased production, abnormal advances in wages, transportation difficulties, increased manufacturing costs and strong demand; and

"Whereas, The retail lumbermen realize that speculative prices in lumber are detrimental to their interests, the interests of their customers and the building business in general; therefore, be it

"Resolved by the Retail Lumbermen's Association of Philadel-

phia, That it urge upon all its members to do everything possible to restore normal conditions; and be it further

"Resolved, That the retail lumbermen, being unable to remedy these conditions themselves, hereby call upon all lumber manufacturers and wholesalers to lend their best influence and efforts to assist us to this end."

* * *

Some idea of the volume of current timber sales is reflected in an advertisement contained in a current issue of the British Columbia Gazette and referred to by Hon. T. D. Pattullo, minister of lands, last month. Seven sales in the Vancouver forest district aggregating \$110,000 are noted in the government publication.

* * *

If there is one delusion more delusive than another it is probably the one that prevails to the effect that that the net annual growth of timber in Canada is largely replacing from year to year that which is cut or burned. The fallacy of this belief was ably answered in a recent edition of the "Canada Lumberman" by Frank J. D. Barnjum of Annapolis Royal, N. S., who has for years devoted special study and attention to Canadian problems. He is a sane, earnest authority on the question of the wood resources of the eastern provinces and by voice and pen is sounding a warning note to which it would be well to give heed. He points out that it is high time Canadians began to look at the question of a rapidly vanishing timber supply squarely in the face and note where we are heading before it is too late, for, as he well says, a treeless continent is unthinkable. "Annual growth" is a beguiling bogey.

* * *

The fact that the Laurentide Company, Limited, Grand'Mere, has taken over the seaplanes loaned by the Government to the St. Maurice Forest Protective Association insures a further trial being given to this form of forest protective work. It is no secret that some of the directors of the Protective Association are sceptical as to the value of seaplanes in forest protective work, having regard to the cost, and the fact that the association has not financed the work for a second season is significant of the opinion of the directors as to the experiment.

Mr. Ellwood Wilson, forester of the Laurentide Company, is a most enthusiastic advocate of the use of seaplanes not only from the protective point of view, but from the standpoint of mapping the forests, and of getting a better idea of the forest area than is possible by ground work. Aerial photography has proved of great value in this connection, enabling various kinds of trees, roads, camps, portages, etc., to be readily and clearly distinguished. The whole work is yet in its infancy, and although a certain amount of data was obtained last season in the St. Maurice district, it was not sufficient to demonstrate as to whether the seaplanes will accomplish all that their advocates claim for this form of protective work, or whether they are the failures which others insist that they have proved to be. It is, therefore, fortunate that companies like the Laurentide and Price Brothers are in a position to continue the experiment. Probably it will be found that the place of seaplanes will be as an auxiliary to the ordinary fire protective methods, which have undoubtedly done much to save our forests from fires and thus conserve our forest resources.

The Hardest-Worked Letter

The most unfortunate letter in the alphabet, some say, is the letter "e," because it is always out of cash, forever in debt, never out of danger and in hell all the time. That's all true. Still it is never in war, always in peace, and always in something to eat. It is the beginning of existence, the commencement of ease and the end of trouble. Without it there would be no life, no heaven. It is the centre of honesty and is always in love. It is the beginning of encouragement and endeavor and the end of failure.

Wholesale Lumbermen Discuss Taxation

Favor Tax on Gross Sales of One Half of One Per Cent in Place of Business Profits Levy—Mr. Denton Speaks on the Legality of Various Contracts

A. E. Eckardt, Toronto,
Vice Chairman, W.L.D.A.

The monthly meeting of the Wholesale Lumber Dealers' Association, Inc., which was held on Friday, April 16th, at the Albany Club, Toronto, was largely attended. The session was one of the most interesting that the association has as yet had. The chair was occupied by Mr. A. E. Eckardt, vice-chairman, the chairman, Mr. A. C. Manbert, being out of the city. The chief event of the evening was an address delivered by Mr. Frank Denton, K.C., on the subject of "Contracts."

Several matters of routine business were disposed of early in the evening, and a discussion followed in regard to the Business Profits War Tax. Mr. A. E. Clark reported that he had been in attendance at a meeting of the members of the Canadian Lum-

bermen's Association, the day previous, at which this subject had come up for discussion, and at which it had been decided to suggest to Sir Henry Drayton, Minister of Finance, that a tax upon gross sales should be substituted for the Business Profits War Tax.

Several of the members present joined in the discussion on the subject, and while it was recognized that a tax upon gross sales had some quite important faults, particularly the burden it would place upon a party whose business might be carried on temporarily at a loss, it could be expected for practical purposes to work out satisfactorily. In the first place it would insure a steady revenue to the government in good years and bad years. The Business Profits Tax would only bring in revenue in years in which there were profits. A tax upon gross sales would be much simpler to impose, as it would not require expert auditing. It could be collected more promptly than the Business Profits War Tax. It would extend more equitably to all parties, including manufacturers and merchandizers as well as brokers and professional men. During the discussion of the subject it appeared to be the general feeling that a committee should be appointed and a resolution prepared and sent to the Finance Minister. On motion of Mr. McBean, seconded by Mr. Frank Kent, this suggestion was carried and the chairman named a committee consisting of Mr. A. E. Clark, Mr. W. C. Laidlaw, and Mr. Frank Kent.

Favor Federal Tax on Gross Sales

After this committee had retired and considered the subject for some time they returned with the following resolution:

"That the Wholesale Lumber Dealers' Association, Inc., after careful consideration, at a regular meeting of the association wish to place themselves on record as strongly opposed to any re-enactment in the form of a Business Profits War Tax Act. As an alternative plan, in order to raise the necessary revenue required, by the Government, they would suggest a tax on gross sales of about one-half of 1 per cent., and they respectfully submit this as their recommendation."

On motion of Mr. A. E. Clark, seconded by Mr. W. C. Laidlaw, the above resolution was carried, and a copy was sent to Sir Henry Drayton, Minister of Finance, after the meeting, a copy was also sent to the secretary of the Canadian Lumbermen's Association.

On motion of Mr. D. Barclay, seconded by Mr. Alex Read, a resolution of condolence was carried to be sent to the wife and family of the late W. D. Lummis.

Report on Open Competition Plan

Mr. H. G. McDermid made an interesting report upon the open competition plan as operated by the American Hardwood Association, which recently resulted in an injunction of the Court being operated was based upon the collection of information by the secretary regarding prices at which members sold their stock during the

previous week or month, the information being furnished in tabular form to all members about ten days later. Action had been brought against the association on the ground that members were using this information to assist them in advancing prices. While the association and its legal advisers felt perfectly satisfied that the final result of this action would be all right and their course would be found to be justified the present situation is that the practice cannot be continued until a judgment of the Higher Court has been handed out. Mr. McDermid's report on this subject was of particular interest because of the fact that the address to be delivered by Mr. Denton would deal with a subject of rather similar interest.

The chairman then aroused considerable approval by drawing the attention of the Entertainment Committee to the fact that they should soon get busy upon the details for the summer picnic of the members of the association to Grimsby Park which had been decided upon at a previous meeting. Mr. Donald Barclay, one of the members of the Entertainment Committee, undertook to get busy upon this matter.

No Market For Hardwood Lath

Mr. G. B. VanBlaricom, editor of the "Canada Lumberman," reported to the association that he had recently received an enquiry from a Quebec manufacturer asking about the possibility of marketing hardwood lath in Ontario. A general discussion took place on hardwood lath and it was the opinion of those present that there was no demand for such an article, that it could not be employed profitably or successfully and in any event would prove too costly to use. It was explained that hardwood slabs and edgings were generally cut into pickets of various sizes for chair legs, supports, etc.

Mr. Denton Speaks on "Contracts"

The address delivered by Mr. Frank Denton, K. C., was a brief and remarkably clear outline of the law of contracts in Ontario. It would not be possible to condense the address without spoiling it. One of the outstanding points which he made related to the essentials of a good contract, the chief ones being that "Two minds must come together" and "There must be a certainty about what is wanted." Mr. Denton then outlined the Statute of Frauds and its effect upon contracts. Then he devoted his attention to an outline of the situation created by the various laws on contracts, which prevail in different provinces of Canada, and in the different cities of the Union which complicates the situation when the parties to a contract are situated in different provinces, or in one province and one of the cities of the Union. The important matter under such conditions was to determine the exact place in which the contract was made. Frequently this developed many very fine points of law.

At the conclusion of the address the chairman tendered thanks of the association to Mr. Denton and the meeting then adjourned.

Northern Ontario Now Making Real Progress

The New Ontario Colonization Co., whose mills are at Jacksonboro, Ont., say that their stock of pulpwood and sawlogs on hand is about the same as last year. They have started operating for the season. All the company's output of lumber of last year has been shipped.

The call for pulpwood and other lines of forest products at the present time is particularly good and the New Ontario Colonization Co. intend to take care of the demand as far as they are able to do so. Their pulpwood is of spruce and they have not yet put out any poplar. Owing to the scarcity and cost of getting out wood, the prices for the rossed product will be unusually high this year.

The company are making some very material changes to their planing mill and rossing plant as to their sawmill, and intend during the early spring and summer to build a number of houses for the men as well as carry out some works of a public character for the convenience and comfort of the residents of Jacksonboro.

Mr. W. K. Jackson, of Buffalo, president of the New Ontario Colonization Co., in a letter to the "Canada Lumberman," says. "We feel that Northern Ontario will make some real progress during the present year. We have a number of settlers coming in on our lands and they are planning to build houses and improve the surroundings."

New Brunswick Takes Front Rank in Forestry

Regulations in Regard to Cutting and Disposal of Timber are Well Enforced— Separating Agricultural Soils From Forest Areas—Splendid Progress

By C. McKay, St. John, N.B.

"The N. B. government is to be congratulated upon its progressive and far-sighted forest legislation and upon the later developments in organization, timber sales policy, forest survey, land classification and forest research. No province of Canada has a more progressive forest policy than New Brunswick."

This quotation from a recent report of the Committee on Forests of the Conservation Commission of Canada is an interesting tribute to the administration of Hon. E. A. Smith, Minister of Lands and Mines for the province. In spite of the fact that Hon. Mr. Smith has been carrying on under war conditions his department has executed an extraordinary amount of work in the way of developing a system of fire protection, and conducting forest surveys and land classification. In connection with this latter work the Department has undertaken the classification of the soil of the Crown Lands into various classes, according to their suitability or unsuitability for agriculture. This is a novel departure for eastern Canada, and that it is an important step in the right direction is attested by the fact that a recent publication of the United States government, entitled "Employment and National Resources," says: "Land classification is one of the fundamental lessons Canada has to teach. The Province of New Brunswick has made an excellent start in this line. All the Crown Lands are being covered systematically by a soil survey, showing clearly the relative fertility of the various areas."

Again one of the leading foresters of the United States who is attached to the University of Michigan, showed his interest in this particular work by addressing a letter to the Minister in which he said: "So far as I know this is the first instance in America where a real effort has been made to separate the agricultural soils from the forest areas prior to the development of the country."

Expect Stumpage of Million Dollars

The provincial government owns over 7,000,000 acres of land, or about one-fourth of the area of the province, and it is expected that next season the government's revenues from the stumpage of timber cut on these ungranted lands will be upwards of one million dollars. Of course, there are large areas of private lands covered with forests. While the Minister of Lands is not able to extend all the regulations which apply to the public lands to private lands he has a certain authority over them in matters relating to fire protection, and there is now a good deal of co-operation between his officials and the owners of private lands for fire protection purposes and conservation.

In the work of administration the Minister is assisted by a Forestry Advisory Board, composed of Colonel Loggie, the Deputy Minister, G. H. Prince, the Provincial Forester, and two of the biggest-lumber operators in the province, D. J. Buckley of Newcastle, representing the lessees of Crown Lands, and Archibald Fraser of Edmundston, representing the owners of private forest lands. This Board meets regularly and deals with matters of organization, management and direction of the Forestry Service in general—methods of counting and scaling logs cut on Crown Lands, elimination of unnecessary waste in logging, prevention of cutting of undersized timber, and the adoption of improvements for the purpose of better fire protection, such as ranger cabins, telephone lines, look-out and fire fighting tool caches.

The Powers of General Executive

The general executive officer is the Provincial Forester, who now has charge of forest protection, forest surveys, land classification, enforcement of cutting regulations, scaling timber, and also the enforcement of the fish and game laws. His powers are more comprehensive than those of any other forestry official in Canada. Under him is a permanent force of forest inspectors and forest rangers, whose duties are to see that the logging and scaling operations are observed, to enforce the fish and game laws, and to protect the forests from fires. These men are selected by competitive examination, and are required to give six months satisfactory service before receiving a permanent appointment. According to the Minister the organization of this force is going forward satisfactorily, especially since the return of many experienced woodsmen and scalers from the war, it being the policy of the Department to fill vacancies and new positions with returned men who qualify at the regular examinations. Last year 38 rangers counted and scaled approximately 220 million feet of logs. Last winter the force was increased to 42, and it is estimated

that the cut will be over 300,000,000 feet. In the dry season additional men are employed as fire wardens, and during the hunting and fishing season additional game wardens are also engaged.

The New Brunswick Forestry Service has attracted much attention and favorable comment in the press of Canada and the United States, and Dr. C. D. Howe of the Conservation Commission recently stated "that in no other province of Canada are the regulations in regard to the cutting and disposal of timber so well enforced."

Half Centre An Acre For Protection

In order to provide a Forest Fire Protection Service, the New Brunswick Government levies a tax of one-half a cent per acre on its forest lands. During the height of the fire season last year the Provincial Forester had at his disposal the following staff:

Forest Rangers and Inspectors	40
Temporary Fire Wardens	32
Co-operative Fire Wardens	60
Voluntary Fire Wardens	154
Road Commissioners	490
Total number actively interested in Fire Protection..	776

In the work of fire protection the Department has the active co-operation of the holders of leases to cut timber on the Crown Lands. Last year these licensees offered the services of 60 of their woods superintendents who were appointed co-operative Fire Wardens and given the same authority as the Government Wardens to call out men to suppress fires. All the Road Commissioners of the Province have instructions to call out all the men under them and extinguish fires in their districts. The Voluntary Fire Wardens, who are leading citizens in their districts, also have authority to call out men to fight fires in their neighborhood. Owing to this extensive system of supervision, out of 409 fires reported last year, 342 were promptly suppressed without any serious damage.

Two years ago an Act was passed requiring a permit from a Forest Ranger or Fire Warden before setting out slash or clearing fires. Machinery for the enforcement of this Act is not yet fully in order, but its value has already been demonstrated. During last season 2,053 fire permits were issued, and only in five instances did the fires escape and require extra assistance to extinguish them, while of 36 fires reported set without a permit 28 got beyond control and resulted disastrously not only to those who violated the Act, but to the people in the neighborhood as well. The greatest fire of the season, which burned thirty houses, caused a loss of over \$100,000, and nearly roasted a dozen families, was caused by an unauthorized settler's fire.

How Propaganda Work Is Conducted

In order to develop interest in fire protection the Forestry Service carries on a considerable amount of propaganda. All over the province posters direct attention to the important features of the fire laws and permit system, appeal to the people's interest in their greatest natural resource, and warn them to always put out camp fires and be careful with matches and cigarettes. Over 8,000 telephone directories in rural New Brunswick carry the following advertisement:

"If you see a fire put it out. If you cannot, notify the nearest Fire Warden. If you fail to locate him, telephone to the Chief Fire Warden, Crown Lands Office, Fredericton." This notice is credited with splendid results.

As the agricultural exhibitions throughout the Province the Forestry Service has been working on the plan of having a booth, containing a forest fire protection scene, a game exhibit and a pulp paper exhibit, all designed to bring to the attention of the public the importance of the forest and game resources and the need of protection and conservation. At the Chatham Exhibition a live deer was on view, and this proved a great attraction for the children who brought their parents along.

Most of the envelopes used for Departmental correspondence are stamped with short catchy sentences regarding the importance of fire protection, and tens of thousands of posters are displayed in places of vantage. Here are samples:

A tree will make a million matches,
A match will burn a million trees.

Lumber Retailers Talk on Timely Problems

Outlook For Present Year is Promising—Necessity of New Vision in Regard to Prices—Getting Profit on Replacement Values Strongly Advocated

At the recent meeting of the members of District No. 6 (Orangeville and vicinity) in Toronto several important matters were considered. J. A. Matthews, of Orangeville, presided, and different trade topics were considered.

In reviewing market conditions, J. B. Mackenzie, of Georgetown, said that he believed there would be a genuine shortage of shingles this year and that in spite of the temporary easing off in prices, they would all be able, throughout the year, to do a satisfactory business in shingles.

The labor market in Georgetown was an important matter, Mr. Mackenzie reported. On the first of March he had voluntarily increased the wages of his men by one dollar a day. His great problem now would be to raise his prices accordingly. "We have all

were getting. In this matter several others of the dealers present reported similar experiences. Most people were now becoming convinced that high prices were here to stay and were coming into the market for building materials. He was all the time devoting as much attention as he could to educating his community in regard to the price situation and he had found that reasonable presentation of the actual market facts was being accepted.

A. W. Merkley reported that he believed also that the high prices were here to stay. Last year the public had considerable doubt on this score and had not been so ready to go on with building operations. This year it was different. He estimated that in his district there was at least one half more building going on than last year.

The situation of the farmer came up for considerable discussion and Mr. Mackenzie reported that the farmers were not worrying so much about the prices as about the scarcity of labor. He was of the opinion that if the industrial activity in the larger centres should wane the dealers in the smaller communities would have a period of steady business which would be improved by the greater availability of labor.

An important point which was emphasized by several of the dealers present was the wisdom of keeping continually in mind the necessity for obtaining a profit on the replacement value of the material they sold.

Difference of opinion developed regarding the present situation of the shingle market, some dealers believing that they should only buy such shingles as they needed for their current trade, others believing that shingles were a good buy for future business.

Referring to the labor situation, Mr. Udney Richardson, of Elora, reported that he had been obliged to adopt a nine-hour day, as the other employers in Elora had done so. The men on the farms also wanted higher wages.

The last matter discussed was the trade outlook. "What do you think the conditions are for the near future?" Mr. Mackenzie asked. "Have we anything to fear?"

"Not for this year," replied Mr. Henderson, of Cheltenham, and others agreed with him. One dealer stated that in his opinion there never had been a time when things were better, or the outlook more promising for them. They should all be able to make a fair profit on the replacement value of the stock they sold.

The next meeting of the branch will be held at Harriston, Ont., the home of Mr. John Howes, on the first of July.

J. A. Matthews, Orangeville, Ont.
Chairman of District No. 6, O.R.L.D.A.

got to get a new vision in regard to prices," he said. "We must get it into our minds that our expenses are higher and that we must get that much more margin in order to get our money back."

Another matter of importance was in connection with quotations on bills. He had made it a rule for several months past that, when a man came with a bill, the prices quoted upon it were for immediate acceptance. It must be taken and paid for immediately. He was not doing business in "futures" any more. That is today, the customer must take the material and pay for it within 30 days. Conditions were just right for this policy now. He did not mean everyone would always be ready to take immediate delivery and make payment at once, but they all felt that prices were going higher and that they would be wise to secure the material quickly.

Quoting on Thirty Day Limit

A. W. Merkley, of Milton, suggested that it might be pretty hard to keep all customers down to a thirty day basis, to which Mr. Mackenzie replied that he was referring to cases in which he figured upon bills. Their figures were quoted only on a thirty day basis. He was carrying out the same plan in connection with doors. He told his customers that the doors would have to be taken away and stored if they could not immediately put them into the buildings. This way of doing business seemed to be abroad in the air just now, he said. He thought that the dealers were in exactly the same position as labor. Laborers did not seem to care whether you employed them or not, they were insisting upon their increased wages. Dealers should adopt the same attitude towards their customers, that is to say, should make it clear that they did not care whether a prospective customer took their goods or not, but if he did, it should be under the conditions which he had outlined.

Mr. Mackenzie referred also to the catalogue house prices. He did not find that this competition was having any effect upon business. The catalogue houses had to buy their materials at the prevailing high prices and the prices that they were asking were just as high and in many cases much higher than those which the dealers

Canadian Lumbermen in Auld Ireland

The "Timber Trades Journal" of London, Eng., contains the following, of particular interest, in a recent issue under the caption of "The Canadians in Ireland":—

Since the appearance of the article on the Canadian Saw Mills in Ireland, and their "Stacks of Lumber," we have been inundated with inquiries concerning them. Having had, at the time, only a limited knowledge of their business methods, we were unable to give much assistance to our readers. The article stated, it will be remembered, that they apparently had no organization for the disposal of their stocks. But further inquiry now tends to show that their intention is to follow their more or less usual practice, which is the felling, hauling and breaking down of heavy timber into handy sizes, and then either sell in bulk or by auction.

Re-sawing is therefore not considered by them at all. And this is easily understood when one takes into account that the requirement of this country is particularly the squared timber. In pre-war days, of course, the prevailing custom was to import the plank from Canada and elsewhere, and consequently there was, in this country, but small attention paid to proper equipment for the handling of heavy timber in the round. It appears to us, therefore, that the Canadian has filled a gap in our home timber manipulation by his introduction into the British Isles of his expert Canadian methods and Canadian machinery for dealing quickly and cheaply with the heavy log. The great shortage of timber to-day, and (to the eye of the keen observer) the limited prospect ahead of obtaining the necessary supplies from abroad at anything like a reasonable price, has compelled the timber trade to recognize the now undisputed value of our home-grown woods. The Canadians, too, seem to know their value, as rumours are afloat that they are at present negotiating some important timber concessions in Ireland.

Why Lumbering is Very Hazardous Business

Over Ninety Per Cent. of Companies in West Have Never Paid Any Dividends And Some No Interest on Bond Issues, Declares Secretary Poole

Owing to the many attacks appearing in the press with regard to the attitude of lumber manufacturers in the matter of exports of lumber, high prices, etc., it is only fair that the public should understand the true facts touching one of the most important industries of Canada, says I. R. Poole, of Vancouver, B. C., Secretary of the Mountain Lumber Manufacturers' Association, who, in a recent and timely article, the "Lumber Industry: Some Reasons Why Prices are High," adds:

From 1908 to 1912, the retail dealers of Alberta, Saskatchewan and Manitoba bought immense quantities of lumber in the United States—about \$10,000,000 of Canadian money put into the pockets of foreign manufacturers to the detriment of Canada. The lumber industry of British Columbia suffered great losses during that period and subsequent years, and at least sixty per cent. of the lumber manufacturers were forced into liquidation, and many have not recovered; hence, when trade revived, the supply was not equal to the demand.

The revival occurred first in the United States, there being at that period practically no demand for lumber in the Western provinces of Canada. During 1919 Canadian shipments of lumber, lath and shingles to the United States amounted to over \$23,000,000 at a time when the balance of trade was against Canada, and this should be recognized in its true light, being one of the greatest factors in restoring the balance of trade and the value of the Canadian dollar. Further, had it not been for the extensive market in the United States, Western Canadian mills would have been forced to suspend operations during the latter part of 1919. Retailers in the West reduced their stocks, evidently with the hope that lumber would sink below the disastrous prices which prevailed prior to that period, and scarcely any business could be obtained in the Prairie Provinces.

Notwithstanding the abnormal demand for lumber in the United States in 1919, the lumber manufacturers did not make the profits generally imagined, as the statement covering 1919 operations now being prepared for the Board of Commerce will show. Whilst it is true that some mills enjoying natural advantages can survive during depressions, this is not applicable to the majority of mills with difficult logging propositions, but even those possessing great natural advantages made but very meagre profits during 1919.

Advance in Costs of Manufacture

It is true that lumber prices advanced with rapid strides during the past year; still, the advance in costs was even more rapid, with the result that, in spite of increased returns, the costs kept pace and almost wiped out the profits, even of those mills favorably situated. The cost of lumber is high compared with previous years, but in comparison with other goods it has not risen in equal ratio. A bushel of wheat, for instance, will purchase three times more lumber than it would 10 years or so ago, and this item has a direct bearing on the increased cost of lumber and other commodities. The cost of labor, the biggest item in the production of lumber, has increased over 100 per cent., and will still rise higher. The terrible effects of war has wiped out thousands of skilled workmen, and rendered thousands more unfit for work, and new hands, hard to get, have to be trained—another costly operation. Hay costs 125 per cent. more, oats 150 per cent., flour, 100 per cent.; dried and canned goods, 300 per cent.; hams, bacon, pork, eggs, over 100 per cent.; cereals and other food-stuffs, over 100 per cent. All these are used in enormous quantities in the production of lumber, and farmers and others are apt to lose sight of the fact that British Columbia imports agricultural products averaging over \$20,000,000 per annum. Mill supplies increased from 100 per cent. to 200 per cent. For example, a circular saw that a few years ago cost \$80 now costs \$200; band saws that cost \$3.85 per foot are now \$8; and belting has advanced over 250 per cent. Another important item is the great increase in freight rates.

Lumbermen are Not Profiteers

It can readily be seen that the wholesale price of lumber has not kept pace with other commodities, and the statement of operations now being prepared for the Board of Commerce will verify the position taken by the manufacturers as regards cost of production and receipts for lumber which will dispel the popular idea that lumber manufacturers are profiteers.

A statement was widely published that the British Columbia

mills had shipped 80 per cent. of their product to the United States, to the detriment of Canada, and that the Canadian consumer had suffered in consequence. That statement, like many others, is not true, the correct figures being 20 per cent. exported in 1919, and a large quantity of that stock has laid in the mill yards for years—dead stock Prairie dealers would not take. If the latter were short of lumber at any time, the manufacturers were not made aware of the fact, as it is their desire to give Canadian consumers the preference, their natural market being the Prairie Provinces, which they are extremely anxious to hold. Dealers and other purchasers of lumber cannot reasonably expect manufacturers to pile up great stocks of lumber at the present excessive costs and hold the stocks until purchasers are ready to place orders. It is not only unreasonable but impossible to do this, and if the mills are to continue operations they must ship somewhere. When the Prairie market cannot absorb the product of the mills it is in the public interest that other provinces or states who can pay for it should have it. To cease shipping means cessation of operations, which would deprive thousands of men, women and children of their daily bread.

A Meeting that Did Not Materialize

The public should not lose sight of the fact that immediately the Retailers' Association notified the Manufacturers' Association of the anticipated shortage of supplies the retailers were invited to meet the manufacturers on the 22nd inst. in Calgary to discuss the problems confronting the industry and to make arrangements to supply the present and future requirements of the Prairie Provinces. This invitation was not accepted, the natural inference being that the alleged shortage is not so serious as represented.

Regarding the demand for an embargo on the export of lumber, there are extraneous influences at work which were responsible, some political and some commercial. Some wholesale gamblers in lumber got badly caught by the natural rise in prices, having sold lumber futures, and, being called upon to deliver the goods, could not do so except at a loss. An embargo on exports was calculated to relieve those patriotic gentlemen, some of whom are the middlemen or parasites who devour the enormous profits made between the hard-working producer and the equally hard-working consumer, and this is the class referred to who were convicted and punished in 1907, the same period when the manufacturers were exonerated.

The reasons for the upward trend of prices are too many to enumerate. The demands of working men for higher wages are not wholly responsible for the increase in costs. The Government has nearly doubled the charge for royalty. Freight rates have increased over 30 per cent.

How Logs Have Climbed in Price

The chief cost in producing lumber is the raw material—saw logs. It will be noted that the public quotations for logs are: Cedar, \$30 to \$50; fir, \$20 to \$30—an average cost of \$25 to \$30 per 1,000 for logs. There are many factors of which the public have no knowledge which are responsible for the ever-increasing cost of lumber. Not many years since, logs could be obtained for \$3 to \$5 per 1,000, but as timber is cut nearer to mills it recedes from the point of operations and calls for the building of expensive logging railways, log flumes and other expensive means of transportation.

At the best, the lumber manufacturing business is a hazardous one, and the public records will show that over 90 per cent. of the companies have never paid any dividends and some have not even paid interest on bond issues.

During the last 15 years mills which were able to survive have done so through depreciating their assets and borrowing heavily from banks and other sources in the hope that prosperous times would return. It must strike observers as most remarkable that manufacturers of other commodities who are protected by tariffs are immune from the public attacks and false charges which are made on the only unprotected industry in Canada.

A recent despatch from Marquette, Mich., says: Timber workers of Marquette lately voted 94 to 1 to strike May 1, unless demands for an eight-hour day are met. Locals in District No. 2, which includes Michigan, Wisconsin, Minnesota and Canadian Provinces near those States, will vote, it was stated.

Payment in Full Value of Canadian Dollar

Lumbermen of the Dominion Contend That They Should Be Paid in Full on British Purchases of Timber and Not in Depreciated Pound Sterling

In the last issue of the "Canada Lumberman" A. E. Gordon, of Toronto, who recently returned from the Old Country, referred to the action of Canadian lumber operators, who sold large consignments of timber to the Old Country, desiring settlement on the full basis of the Canadian dollar, and not at the depreciated value of the pound sterling. Mr. Gordon stated that a large amount was involved in this, something like \$750,000 and that the question was one of the most serious in the way of finance that had arisen between Great Britain and Canada in a long time. Negotiations with a view to settlement had been going on for some time and Canadians are hopeful that the fair-mindedness of the British government will prevail and that Canadian exporters will be paid for their lumber upon the basis that they have a right to expect.

A recent issue of the "Financial Post", Toronto, reviews the question at considerable length and adds some particulars as follows:

Canadian lumbermen will stand to lose heavily on contracts entered more than a year ago with the British timber buyer, Montague L. Meyer, for timber for the British Government, as a result of the depreciation in sterling exchange, unless the negotiations now being carried on by the Canadian Minister of Finance with the British Treasury for payments to be made in full value of the Canadian dollar are rewarded with success. Notwithstanding the fact that the Canadian Government has advanced credit to the amount of \$50,000,000 to be used by the British Government in the purchase of timber in this country, payments have, up to the present, been made in the depreciated British currency. As a result of the decline in the sterling exchange rate there is approximately \$5,750,000 at stake, and Canadian lumbermen contend that payments should be made in the full value of the Canadian dollar. The matter is now being taken up with the British authorities by the Minister of Finance through his representatives in England, W. C. Noxon, director of the Overseas Branch of the Department of Trade and Commerce, and Sir George Perley, but, so far, no definite decision has been arrived at.

How Canada Provided the Funds

Early last year the Canadian Government was notified that the British Treasury had under contemplation the placing of large orders in Canada for timber to be used for construction purposes, for delivery during the period of about two years after the conclusion of hostilities. In view of the international exchange conditions, however, the British Government was not in a position to authorize the placing of orders for such timber unless the Canadian Government would provide the funds necessary to finance the transactions. As a result of further negotiations, the Canadian Minister of Finance authorized the establishment of a credit of \$50,000,000 on behalf of the British Government with the stipulation, however, that it was to be drawn upon only in the event of exchange being unfavorable at the time when payments for purchases of timber in Canada became due.

The British timber buyer thereupon came to this country and placed a large number of contracts, about 200 in all, with Canadian lumbermen, and delivery is still proceeding. It was concluded, in view of the fact that the Canadian Government had put up a credit of \$50,000,000, that payment would naturally be made in Canadian funds or in equivalent value in British money. When the margin between the Canadian and English currency widened, and payments continued to be made in the depreciated English money, it became apparent that unless some move were made to remedy matters the Canadian dealers would lose heavily on their transactions with the British Government. They took exception to the continued payment in English currency and the controversy developed. They had not contemplated a depreciated exchange rate in making up their selling prices or otherwise due allowance would have been made. So far about \$24,000,000 of the British credit has been used up in the purchase of Canadian timber.

The lumbermen finally stated their grievances to the Minister of Finance and it developed that there was lacking uniformity in the matter of contracts, some providing more lenient terms than others. Payment was provided in a number at the par rate of exchange, others at the price of dollars in Canada and in the third class at the current rate of exchange. It is understood that there was discre-

pancy also in the matter of the price paid, and one instance is cited of a variation of \$185,000 on two blocks of timber of practically the same quantity and value, and in favor of a company, one of whose members is prominent in Government circles. The Minister of Finance recognized the value of uniformity in the matter of contracts and agreed with the lumbermen that Canadians should not be penalized by the terms of the contracts as a result of the developments in the exchange situation, and since Canada was providing the money for the undertaking it was the duty of the Government to see that the individual dealer should not suffer, nor should there be any apparent discrimination in favor of any single individual or group.

Beaver Company Concentrating at Thorold

The Beaver Company have closed their Ottawa office and the finishing plant was recently removed from that city to Thorold, Ont., where a new administration and sales office have also been established. The firm announce that combining their complete finishing and raw material plants at one central point brings about a considerably increased service for the Canadian trade and enables the organization to provide for a rapidly expanding market in beaver board. The company also eliminate the expense of rail shipments by making sure of uninterrupted production in placing their finishing unit directly at its source of supply. Train shipments of logs for the plant come in daily.

The Beaver Company by this concentration of interests have their entire manufacturing operations focused at a single point. It also saves shipping single ply stocks from Thorold to Ottawa and thus not only reduces freight costs and unnecessary handling but greatly facilitates production. Two years ago the capacity of the mill at Thorold was doubled and practically every part of the equipment was duplicated, making the largest fibre wallboard mill in the world.

The Beaver Company have 128 square miles of timber lands, and logging camps on the Moose and Abitibi Rivers north of Cochrane, and maintain rossing mills at Charlton on the C. N. R. It is ten years since the company started operations in Canada by opening an office and a small finishing plant at Ottawa. Since then the record has been one of steady development, constant progress and ever-widening appreciation for Beaver board, Beaver board grained and Beaver blackboard fibre products.

Erecting New Sawmill on Key River

James Ludgate of Parry Sound, Ont., who for the past ten or eleven years has been operating sawmills at McKellar and Lorimer Lake, has closed out these mills and has taken in a partner, H. J. Thompson of McKellar, the new firm being known as Ludgate & Thompson. They have purchased a piece of property from the Schroeder Mills & Timber Co. and are erecting a small sawmill at the crossing of the Key River on the C. N. Railway 54 miles north of Parry Sound. They will have a cut of 1,000,000 feet this season, chiefly pine, some birch and white oak. Mr. Thompson was manager for Mr. Ludgate at McKellar and Lorimer Lake and is the manager of the new mill. The firm are located just two miles from Pakesley on the Georgian Bay level and will also handle cedar poles and posts.

Brompton Will Build New Pulp Plant

The Brompton Pulp & Paper Co., Limited, have announced that construction of an 18,000-ton pulp mill will be begun at East Angus, Que., within a few days and it is hoped to have the plant completed and in operation by the end of the year. The company declared the usual quarterly dividend of 1½% on the common shares. It has been rumored for some time that the Brompton company intended to double the common capitalization by raising the amount from \$7,000,000 to \$14,000,000, and that the new shares would be placed on the market at \$20.00 to \$25.00 per share. This matter has been discussed for some time but no definite decision has yet been reached. J. A. Bothwell, managing director of the Brompton Pulp & Paper Co., is a former president of the Canadian Pulp and Paper Association.

Canadian Lumbermen's Association Expanding

Dan McLachlin, Arnprior, Ont.
President of C. L. A.

Dan McLachlin, of Arnprior, president of the Canadian Lumbermen's Association, was in Toronto recently, attending the convention of the Ontario Safety League. Although he is not an infrequent visitor to Toronto, this was Mr. McLachlin's first visit in his capacity as the newly-elected president of the C. L. A., and he had the pleasure of meeting a large number of friends and attending a meeting of representative local lumbermen, when the business profits tax was discussed, and it was decided to recommend to the federal authorities at Ottawa that a tax be levied on gross sales, or turnover, in place thereof. It was pointed out that such a measure would be more equitable, just and fair.

President McLachlin says that the membership in the national

organization has grown rapidly of late, no less than thirty firms from various parts of Canada having joined since the recent convention in Quebec. It is the intention to hold local meetings of the Executive more frequently than in the past, in Montreal, Ottawa, Quebec and Toronto.

Mr. McLachlin states that his firm will be starting up their big mill about May 1st. During the past season the company conducted eleven camps and employed about 900 men in bush operations. The normal capacity of the McLachlin mill at Arnprior is 55,000,000 feet a year or over 400,000 feet daily, and the plant has lately been improved proved by the addition of new edgers, trimmers, a Waterous band resaw and other installations. The timber cut is principally white pine, red pine and spruce.

Frank Hawkins, secretary of the Canadian Lumbermen's Association, Ottawa, in which city the thirteenth annual convention of the C. L. A. will be held in February, 1921, accompanied President McLachlin to Toronto. It is some years since the meeting was held in Ottawa and the members of the industry in the Capital City are looking forward with a great deal of interest to the 1921 gathering.

National Forest Policy Advocated

Legislation for a national forest policy in order to promote reforestation, which is regarded as essential for the paper industry, was recommended recently in New York to the annual convention of the American Paper and Pulp Association by its committee on forest conservations.

General recommendations for a national forest policy, to be co-ordinated with state legislation, include:

Permanent annual appropriation of \$1,000,000 to be applied only where the States co-operate, annual appropriation of \$500,000 for forest surveys and land classification, permanent annual appropriation of \$1,000,000 to acquire land suitable for timber growing, and permanent annual appropriation of \$1,000,000 for forest planting operations in national forests.

Other recommendations included forest holdings until their total is 200,000,000 acres; a permanent appropriation for forest research and investigation and extension of the Farm Loan Act to include loans for not more than 50 years for the employment of measures designed to promote timber growing.

State legislation was urged for the establishment of Conservation Commissions and for the classification of lands so that water supply, forest life and mountains suitable for parks would be protected and the rest of the forest land be made available for timber. The committee also favored systems of state taxation that would promote private ownership of forest land and state assistance in private reforestation operations.

Will Produce Five Hundred Tons Daily

The annual financial statement of the Abitibi Power and Paper Company, Limited, Montreal, for the year ending December 31, shows net earnings after operating expenses, but before deductions for bank loans, depreciation, etc., of -2,125,718, an increase of -482,065 over 1918. After all deductions the earnings amounted to \$801,730, or at the rate of 16 per cent. on the common stock standing.

Reporting to shareholders on the year's operations, F. H. Anson, the president of the Abitibi Pulp & Paper Co., stated that "the

earnings cover the operation of the full capacity of the paper mill for the entire year. The ground wood and sulphite mills, owing to unfavorable market conditions in the early part of the year, were not operated to full capacity. For the ensuing year the company sold its entire output of paper at materially higher prices than during 1919. The excess pulp production for the first five months has been contracted for, and indications now are that the full capacity of the entire groundwood and sulphite production will be advantageously placed during the balance of 1920.

"Contracts have been let and arrangements perfected," Mr. Anson continued, "for the installation of three additional newsprint machines and one wrapping machine, which will bring the capacity of the plant up to approximately five hundred tons per day."

Completion of the new power plant at Twin Falls, which will furnish an additional 25,000 h.p., has been arranged for; it is expected that all of this construction will be completed by December 31, 1920, and the additional product available for sale during the entire year 1921.

Shortage of Cars Felt at Quebec

Discussing the prospects for the shipping of lumber this coming season, a Quebec merchant said recently that these were never better, providing the trade could obtain the necessary cars and ship bottoms. He explained that practically all the cut lumber and manufactured deals in the country was sold, but there was no adequate means of shipment. The whole industry is tied up by a serious shortage of cars, especially foreign cars. It is the most serious shortage that has existed for years.

Domestic business is active and there has been a good many orders for Spring delivery. But there are indications that the building trade is alarmed by the high prices. There is a limit, however, to all things, and I do not look for prices to go much higher, he added.

Drive on St. John will be Large One

At the annual meeting of the St. John River Log Driving Co., held recently in St. John, N. B., reports for the year were presented and matters pertaining to the work discussed. The old board of directors was re-elected. One of the officers of the company said that it was expected that the drive this year would run to fifty million feet of logs. The drive last year had been thirty-two million, but that had been rather a low year. This year's total would be about the normal drive.

The officers who were re-elected are: J. F. Gregory, president; Walter Jackson, Fredericton, secretary, and J. A. Morrison, Donald Fraser, F. C. Beattie and A. H. Randolph, members of the executive.

New Woodworking Plant for Parry Sound

In the last edition of the "Canada Lumberman" reference was made to the formation of the Parry Sound Forest Products Limited, Parry Sound, which was recently granted a charter with a capital stock of \$100,000. The members of the company are James Ludgate and Robert Lyons. They have purchased a large building from the Parry Sound Lumber Co. which is right in the heart of the town and adjoins the switch connecting the C.P.R. to the C.N.R. They purpose manufacturing window sash, kitchen tables, clothes reels and other allied lines and will also carry building materials. Robert Lyons, who is an experienced factory man with plenty of push, is the manager of the company.

Mill Workers Get Substantial Increase

Every employee of the big J. R. Booth industry at the Chaudière, Ottawa, exclusive of the office staff and those who have recently been granted increases, will receive an increase of 20 per cent. on his present rate of wages, dating from May 1.

This announcement was made by Mr. J. R. Booth lately, following the acceptance by the pulp, paper and sulphide workers of the 20 per cent. increase which was agreed to by the paper manufacturers at the conference recently held at New York, and which was ratified on Wednesday last, following a vote taken all over the American continent by pulp, paper and sulphide workers, at which they agreed to accept the increases. This will mean that the company's payroll, which is at present estimated at \$2,000,000, will be augmented by approximately \$400,000.

Employees of the E. B. Eddy Company at the Chaudière will also figure in a substantial increase of wages, which is to come into effect on May 1.

New Lumber Yard Laid Out at Pakesley

James Ludgate, Pakesley, Ont.

The Schroeder Mills & Timber Co. whose Ontario headquarters are at Pakesley, Ont., and under the management of James Ludgate, during the past season cut 25,000,000 feet of logs, principally of white pine. The cut was not quite as large as that of last season and a portion of it has been sold to the Cleveland-Sarnia Sawmills Co., of Sarnia, while other sales are pending. The Schroeder Mills & Timber Co. will retain about 8,000,000 feet which they will saw at the former Lauder, Spears & Howland mill at "Lost Channel" on the Pickerel River and also at Cole's mill about two miles away. The Key Valley Railway, which runs from Pakesley to the Lauder-Spears mill, is now in pretty good shape and the distance is twelve miles. The lumber will

be hauled to Pakesley to dry. There the Schroeder Mills & Timber Co. have cleared some thirty acres and will have a nice, well laid-out yard along the line of the C. P. R. Pakesley is located 206 miles north of Toronto.

Several changes have been made at the Lauder-Spears mill, the burner having been erected and other improvements carried out. John Fraser, of Parry Sound, will have charge of the plant. The equipment of this mill consists of a Hamilton double-cut band saw, with a 10 in. steam feed carriage, steam kickers, loaders and niggers, horizontal band resaw, a Garland double edger, etc., with an output of 50,000 ft. daily. The mill, known as Cole's has an inserted tooth circular saw and a capacity of about 20,000 ft. a day.

Fifty Years Behind in Forestry Methods

Mr. Henrick Carbonnier, honorary attache to the Swedish Consulate in Montreal, has just visited the Laurentide Company's nurseries at Proulx, and some of the old cutting operations in the Peche district. He has also visited Price Brothers and the Belgo-Canadian operations. Mr. Carbonnier is making a tour of the continent studying forest conditions for the Swedish Government, and will visit British Columbia, Washington, Oregon, California, the United States National Forests, and the Southern Pine Forests. While at the Laurentide Company's nurseries he expressed surprise that woods operations in Canada were not managed by technically trained men, and said that in Sweden all such work was under the direction of foresters. Mr. Carbonnier declared that in Canada we are passing through the same stage of handling our forests that Sweden did fifty years ago, and said that unless a change were made here in the methods of cutting, which he regarded as destructive, we would be in a difficult position in the next generation.

Good Work Being Done by the S. C. A.

During 1919 the Shantymen's Christian Association, with a force of thirty-four missionaries, took the gospel to 32,400 men in the logging and mining camps throughout the Dominion. Such was the statement made at the annual meeting of the association, held recently in Toronto, by H. H. Gordon, the President. Mr. Gordon said that the work had been done for an expenditure of less than \$12,000, and that the books had been closed for the year with a deficit of 68 cents, which was made up at the meeting.

The following were elected directors: William Henderson, founder of the movement; H. H. Gordon, J. J. Gartshore, W. H. Adamson, R. W. Sharp, John Bellingham, John Wightman, Dr. William Howitt, Dr. Ralph Hooper and John McClelland.

Failed in Claim to Commission

Mr. Justice Surveyer, Montreal, recently handed down an interesting ruling under the law of contracts by dismissing the claim of O. Lebeau against W. H. Pauze, lumberman, of Montreal, for \$700, this being the sum plaintiff alleged defendant owed him on a contract by which he said Pauze agreed to pay a percentage of the value of building material and supplies he sold through Lebeau's agency.

The amount claimed represented a commission on material sold to the Societe des Logements Ouvriers for the construction of a number of houses at Point aux Trembles. Defendant declined to pay the commission when he found that plaintiff contracted himself with

the society for the construction of the houses. Under that contract he was to be paid five per cent of the value of the work done, and any commission or other benefits that might accrue on the supply of any material was to belong to the society. In the circumstances, even though the material was applied for these houses on plaintiff's order, it was submitted that under the conditions of plaintiff's contract with the society, he had no right to claim a commission from defendant.

Mr. Justice Surveyer upheld this contention and dismissed plaintiff's action with costs.

Illustrating New Swing Hammer Shredder

An attractive and admirable illustrated catalogue No. 259 has been issued by the Jeffrey Manufacturing Co., of Columbus, Ohio. The new catalogue illustrates numerous installations and contains valuable engineering information, plant layouts and other data of service to plant managers and superintendents. It also illustrates and describes Type "E" Swing Hammer Shredder, for reducing wood chips, bark and other fibrous materials.

The Jeffrey Type "E" Shredder was developed to meet the constantly increasing demand, incident to the high profitable results obtained from medium sized shredders, for individual units of larger size to obtain greater daily capacities.

Particular attention in the publication is called to the simplicity of design in the Type "E" shredder, the provision made for capacity, for durability and accessibility of working parts, and its easy adaptability to the handling of a variety of materials under different conditions of installation and operation. It is equipped with the highest grade radial ball bearings, which eliminate all bearing troubles, and insure maximum service.

Will Build Four Wooden Barkentines

The agreement between the Federal Government and the Victoria Shipowners, Limited, for the loaning of money to build wooden barkentines in the Cholberg shipyard at Victoria, B.C., was signed recently. Since the raising of the necessary capital by the Victoria Shipowners, Limited, through an appeal to the public, matters have been at a standstill until Ottawa signed the agreement. Four vessels costing \$250,000 each will be built.

New Company Will Log Green Timber

The ring of the axe will be heard in the "Big Green Timber" along the Pacific Highway south of New Westminster before two years are gone, unless present plans are interrupted. The King-Farris Lumber Company, Limited, a newly incorporated company succeeding the M. B. King Lumber Co., Limited, has purchased a tract of virgin timber from the Brunette Sawmills Co. for a sum approximating \$500,000. Mr. M. B. King is president and managing director of the new company and Mr. B. M. Farris secretary.

For two years the King-Farris Co. will be occupied with the logging of the M. B. King tract, which adjoins the recently acquired area. When that work is finished operations will start on the "Big Green Timber."

This tract comprises 1550 acres of virgin forest, composed largely of Douglas fir. On this block, Mr. B. M. Farris stated, there is approximately 125,000,000 feet of timber. Of this 25,000,000 feet is estimated to be spruce and the rest Douglas fir. The company figures that it will be ten years from the time operations start until the tract has been completely logged over.

Many Rumors of New Industries

Negotiations for the sale of the limits and property owned by the Gilmour and Hughson Company, of Hull, Que., it is understood are going on, but up to April 23rd, the situation had not taken any definite form.

Mr. D. G. Gilmour when asked as to the position of the company, stated that so far there had been nothing to justify the rumor that the company had sold out. "There is nothing yet to report about the matter. Perhaps there may be something later on. There is not a scratch of a pen to show that any options have been given or that any sale has taken place," he said.

The prospective purchaser of the company, it is stated, is the Royal Securities Corporation, which company it was heard at Ottawa had the intention, if they acquired the Gilmour and Hughson property, to enter the pulp and paper field, with the possibility of erecting a paper mill in the vicinity of Chelsea, Que.

A rumor was also prevalent that the holdings of the W. C. Edwards Company had been sold. This was denied, and the present position of affairs is that W. C. Edwards Company is going ahead under the same management and with the same staff.

Canada's Timber Wealth Must Be Preserved

Its Conservation Recognized as Necessity of National Prosperity—Investments in Lumber and Allied Industries Must Not be Jeopardized

The need of forest conservation has become generally recognized in recent years through educational work carried on by the Dominion and Provincial governments, and by the industries which are dependent upon the timber supply for their raw material. Conservation, by improved methods of lumbering and by planting, is practised by a number of these industries, and is finding increased favor, as its advantages are becoming more fully appreciated. A statement as to what has been done in this respect, together with some sound advice as to what ought to be done for the maintenance of forest resources, were given in a paper read recently by Mr. Ferd, van Bruyssel, before the Engineering Institute, Montreal. Speaking on the topic "The Pulp and Paper Industry of Canada," Mr. van Bruyssel dealt with the necessity of reforestation, the tenure of timber limits, the labor situation and the matter of Government restrictions. As to conservation he said that, as applied to Crown lands, it was essentially a State affair.

"The Quebec Government," he said, "has evidenced full appreciation of the immense responsibilities involved. And this reminds me that it is only fair to pay a passing tribute to the present provincial administration, which is recognized to be patriotic, progressive and wise—a combination of qualities one should not have expected to find in a ministry elected under a system of universal suffrage, unattended as yet by any measure of proportionate representation."

"Insuperable and permanent barriers should oppose the advent of fraudulent settlers intent upon wood piracy, and of deluded settlers, pitching upon ingrate and shallow soil.

"If I am rightly informed, certain changes in the existing regulations applicable to felling on the Crown domain are under advisement. These changes would make it quite feasible to exploit economically while increasing the productivity of the forest. Just now, it is invaded by jobbers and their hordes, who are free to prey upon all conifers of more than a prescribed minimum diameter. Poplars and other deciduous trees in remote places are not attacked. As a consequence, the spared stands are no longer mutually supporting units in a solid mass, for this has become pitted with the voids first made by saw and axe, and subsequently enlarged by wind falls. In these voids naturally are seeded quick growing, leaf bearing trees, whose crowns soon dominate the remaining conifers, so impeding and even arresting their future vegetation."

Clear Cutting Advocated

"Personally," said the speaker, "I favor wherever practicable, the plan of clear cutting within narrow strips. To illustrate this, let us suppose a limit extends five miles in depth from what is known as a "tote" road, marginal to a stream, this road being staked at distances of 250 feet. Imagine parallel lines originating at each stake and prolonged perpendicularly to the river and road over the whole depth of the limit; then number the strips in regular sequence from right to left. First raze the strips of even number, which thereafter will be seeded from the standing timber on the adjoining odd numbered strips. When the seedlings on the even numbers have grown enough to bear cones, then raze the odd numbers, which in their turn, will be seeded by the young trees on the even numbers. By the time the seedlings on the odd numbers have themselves become cone bearing, a second crop will have matured sufficiently on the even numbers. Also this second crop will be far more productive than that obtained from the primeval forest."

After criticizing as ruinous the present method of taking out the best trees here and there, Mr. Van Bruyssel passed on to a discussion of the Quebec tenure of timber limits. He reviewed the legislation dealing with the title to cut timber and advocated a system of long leases. Upon this point he said:

Long Leases for Timber Lands

"Certainly, we remain confident that, in their wisdom, such Government as it is our privilege to have now at the helm would strenuously oppose any measure calculated to jeopardize the great investments in the lumber and paper industries of this province. Still these are troublous times of socialistic encroachment, where one may well consider the expediency of resting the said investments upon the unquestionable foundation of a long term lease, instead of a yearly license, even if the latter be indefinitely renewable. In fact, such leases are now current in the case of water powers, the time limit might be fixed with due regard to the amortization of the capital outlay in plant or construction, and to the fact that the lessee must

be allowed to reap sufficient benefit from the improved silvicultural methods which should be made to prevail.

Let the rental equal the interest, at the rate of Government loans, upon a proper valuation of the limits. To conform with the law and to prevent collusion, the basis for rent should be determined by selling the lease publicly, the bids starting from an upset or reserve valuation. The lease would be subject to such conditions as (1) the erection and operation of a mill of a capacity proportionate to the resources of the given location as to timber and power; (2) the payment, besides rent, of the stumpage dues, actual or future, imposed upon all licenses.

"So would be eliminated the speculator and the operator aiming to take the timber away from a location which it might be desirable to assign for a paper mill. And on request of any well-qualified party, the limits and water power connected with each location could be reserved for a reasonable time to be occupied in actual investigations and survey, it being understood that, on further request, the lease of the limits would be sold by auction after sufficient public notice, and that the lease of the limits would also receive a lease of the water power under the now established terms."

The point that this system would not apply to existing licenses, except by option, was emphasized.

Mentioning briefly the important factors of water power and transportation, the speaker turned to that of labor. "Herein," he said, "is material for a long dissertation which here would be out of place, but it could not fail to confirm the general belief that, at the present time, labor conditions are more favorable in the Province of Quebec than in any other part of this continent or even of Europe, with the possible exception on Scandinavia, a friendly rival in the pulp and paper business."

Price Fixing is Protested

After reviewing the progress of the pulp and paper industry during the last twenty years, and presenting an interesting survey of costs, with special reference to the mounting costs of production, the speaker concluded with a vigorous protest against the Government's policy of price-fixing.

"The tide having now turned in favor of the manufacturers," he said, "nobody should begrudge them the compensation which a long period of prosperity can afford. Nevertheless they have been submitted to an unprovoked assault, which, in our own country, has been supported by the ordinary power given to the Federal Government under war conditions.

Price fixing is justifiable only when directed against a real or virtual monopoly, responsible for an intolerable abuse, distinctly prejudicial to society. Manufacturers are not monopolists for taking full advantage in an open market of prices rising because of an insufficiency of supply. Were the market a falling one owing to over-supply, no limitation of loss by the manufacturers would be expected from Ottawa. Society in general is not concerned any more than it is in the price of any commodity other than paper, since publishers have always been enabled to secure all their paper requirements on paying the prevalent price and taking the usual business precautions of making timely contracts. They have apparently become resigned to doing this in the United States, where the fixed price has been ignored by mutual consent under the stimulus of the inexorable economic law.

"In Canada any true appeal to the patriotism of our publishers ever meets with the most generous response. Let me, then, exhort our publishers to consider the deplorable effect upon investors of a duel between an industry and its principal customers, bearing in mind that the latter wield the formidable power of the press.

Imagination—Master Force

There is always room for a man of force, and he makes room for many. Society is a troop of thinkers, and the best heads among them take the best places. A feeble man can see the farms that are fenced and tilled, the houses that are built. The strong man sees the possible houses and farms. His eye makes estates as fast as the sun breeds clouds.—Emerson.

Standard Rules for the Grading of Spruce

D. Cooke, lumber grader and inspector of Henry River, P.Q., in a recent letter to the "Canada Lumberman," points out that there should be standard rules for the grading and inspecting of spruce lumber, the same as the National Hardwood Lumber Association of the United States has adopted in regard to hardwoods. These rules for the measurement and inspection are recognized and hold sway over not only the United States, but also Canada, and Mr. Cooke is of the opinion that some such regulations should prevail in regard to spruce. He adds: "I will thank you for a little space in the "Canada Lumberman" to submit to the spruce manufacturers and dealers the attached rules. I do not pretend that they are perfect and would appreciate suggestions from any grader or inspector, but I think, by using a little judgment in applying them, they would soon come to an agreement and have standard rules to go by."

Rules for Grading or Inspecting Spruce Lumber

Grades—Firsts, Seconds, Fine Dressing, Dressing, Common, Shipping Culls

These rules apply to spruce lumber sawn to the standard thickness up to, and including 3 in. deals. Lumber to be of standard thickness and widths, lengths to be 6 to 16 ft. long, edged square, and ends trimmed square.

First.—Pieces to be 3 in. and up wide 6 feet and up long. Must be clear both faces and both edges.

Seconds.—Pieces must be clear one face, reverse side not to be below the grade of fine dressing.

Fine Dressing.—To be inspected from the good face, the reverse side not to be below the grade of dressing.

The good face must be free from heart, but will admit small, sound knots, if not excessive; 1 in. sound knot being considered a defect in this grade, the number of small knots allowed will be determined by the face measure of the piece, but not to exceed in number to half the contents of feet board measure in any pieces.

Example.—Pieces 6 in. wide by 12 feet long, will admit three 1 in. sound knots, or their equivalent in small knots.

Will also admit wane on one edge the full length of the piece or the equivalent on both edges; that will surface off when dressing.

Dressing.—To be inspected from the good face, the reverse side to be sound free from rot and shakes. Will admit sound heart the full length of the piece, and there will be no restriction as to the number of sound tight knots in this grade, will also admit wane that will surface off when dressing.

Common.—Will admit pieces with black heart, soft dry rot that do not extend more than one-third the length of the piece, and that does not exceed in width half the width of the piece, or the equivalent both ends, or one edge, or both edges. Slight shakes, (but not through shakes). Pin-worm holes that will not exceed in number the equivalent of 1 in. knot hole for a piece 6 in. wide by 12 ft. long. Will also admit half-inch wane on one edge the full length of the piece that will not exceed half the thickness of the piece or the equivalent on both edges.

Shipping Culls.—Will admit any piece that will hold nails, and that will stand dressing one side.

The word "Merchantable" or the expression "Fourth Quality and Better" takes in the grades of dressing and better; Fifth Quality, takes in the grade of Common, "Sixth Quality"; the grade of shipping culls.

Density Rule for the Grading of Lumber

Grading has been one of the mysteries of the lumber business. Years of experience are required before one can become proficient in grading lumber, even of a rather restricted range of species, and very often an expert in grading under one set of rules knows little of the rules used for other species and other parts of the country. A publication just issued by the United States Department of Agriculture as Department Circular 64, "How Lumber Is Graded," gives in a few pages the essentials of nearly all the grading rules now in use in the United States.

The hardwoods, according to this publication, are largely graded under the rules of one association, while the softwoods are graded under a considerable number of rules. "Not only are the differ-

ent kinds of softwoods graded under different rules, but the same kinds are, in a number of cases, graded under different rules in different parts of the country and even in the same regions. Such a condition causes frequent misunderstandings between buyer and seller and is confusing to one not familiar with the grading situation." It is for the purpose of helping to minimize the possibilities of such misunderstandings that this pamphlet is issued.

It is pointed out that "the grading rules in general use at present, with very few exceptions, have to do only with defects and do not take into account the quality of the wood itself. That is, if two boards of the same species are clear, or if they have similar defects, both boards are placed in the same grade regardless of the quality of the wood itself. As a matter of fact, the wood in one board may be dense, heavy, and strong, and the wood in the other light and weak. For some purposes, such as siding, ceiling, or finish, it may not matter whether dense or light wood is used; but for other purposes, such as vehicle parts, structural timber, or flooring, where strength or hardness is a prime requisite, the wood must be dense to give satisfactory service."

The Forest Service has for some time advocated the adoption of the "density" rule for the grading of lumber in which strength is a requirement. Two of the largest associations have adopted this rule.

Estimating Cost and Measuring Hardwood Flooring

When the average purchaser asks the lumber merchant the price of flooring, in reality he wants to know the cost in dollars and cents of enough flooring to cover a certain room.

The lumber merchant usually quotes \$75.00 or some such price, which sounds like a lot of money, and the prospective purchaser doesn't know whether he means \$75.00 for the floor, \$75.00 per hundred, or \$75.00 per thousand.

Always use the smallest units of price and make it easy for the customer to understand. If you are selling 2½ in. face hardwood flooring at \$75.00 per hundred feet, quote 7½ cents per foot, or \$7.50 per hundred feet, or 10 cents a square foot for the space to be covered (which allows one-third for matching) or find out the size of the room and quote total price for the amount required.

In this manner you can quote the price and avoid any misunderstanding, without conveying the idea of a high price.

For houses already built talk ¾-in. hardwood flooring. Remember it can be laid right on top of the old floor without removing casing and base. Show the housewife the advantages of having a ¾-in. hardwood floor in her kitchen instead of some kind of floor covering. You will be able to sell many an order in this way.

Following are some of the places where you can sell hardwood floors: Store buildings, public buildings, factories, warehouses, churches, schools, garages, and other buildings. Hardwood floors withstand the heaviest kind of traffic, and they are comfortable to work on. They do not absorb dirt or moisture, and they are sanitary and easily cleaned. Follow up the big building jobs and the results will surprise you.

In this connection it may be interesting to quote the standard measurements in hardwood flooring:

¾ in. and ½ in. in thickness, all faces, is measured ½ in. waste for matching.

⅝ in. and thicker, all faces, is measured ¾ in. for matching.

To determine the number of feet of matched flooring required to cover a given area: Find the number of square feet of floor space to be covered, and add to this amount the percentage as indicated in the following table:

Finished face	Matched Flooring	
	Matched Flooring	Matched Flooring
	5/8" and 13/16" finished thickness	3/8" and 1/2" finished thickness
1 1/2 inches	Add 50%	Add 33 1/3%
2 inches	Add 37 1/2%	Add 25%
2 1/4 inches	Add 33 1/3%	Add 22 1/2%
3 1/4 inches	Add 24%	

Nails

For ¾ in. flooring use 3 d finishing nails.

For ⅝ in. flooring use 6 d finishing nails, and for 13/16 in. flooring use 8 d finishing nails.

Good Building Prospects in the East

Indications point to a very satisfactory building season for the Province of Quebec—and as wholesale and retail lumbermen are naturally interested in construction of almost every description a short review of prospects may prove of value.

Last year was a decided improvement on the previous twelve months, and if the reports from all parts of the province may be relied on, we shall see a considerable gain in the number and value of buildings to be erected in the season which has now opened. Prices of all building commodities are very high, and are not likely to come down. Some lumbermen, it is true, are nervous as to how far the market will hold, and are acting very cautiously. Anything like a serious drop will mean disaster to those who have bought at the prevailing high values. At the same time there is no sign of anything like a slump occurring.

The building permits for Montreal may be taken as an example of what is taking place in almost every city and town in the province. The figures for the first quarter of the year were \$1,461,237 as compared with \$440,102 in the corresponding three months in 1919. Here as elsewhere the revival in construction is spread over a wide area—factories, apartment houses, theatres, schools and churches, and government works. Mr. T. P. Jones, the general manager of the Canada Cement Company, who is in a position to judge pretty accurately the general outlook, states that there is a large amount of work in the hands of the architects, but in view of high costs, he is of the opinion that a short time must elapse before a positive opinion can be formed as to the extent of the improvement.

The most notable feature of the situation is the large amount of work in hand and in prospect in the smaller towns, where electric power is abundant and cheap. This is a factor which is inducing American firms to locate in these cities and towns. The expansion of the pulp and paper industries is another important factor which is contributing to constructional activities. In Three Rivers, for instance, there is an exceptionally large amount of building, due to the influx of population on account of the enlargement of the pulp and paper industries. In the Saguenay district millions are being spent by Price Bros. on developments, consisting of hydro electric plants, new pulp mills, and housing schemes.

The above review does not take into consideration the housing schemes under the Government housing plan. Montreal has applied for three million dollars; Quebec City has been allotted one million dollars, and other places are making demands on the Government—demands which cannot be met in full.

The reports from every quarter give ground for the belief that, unless labor troubles intervene, there is likely to be a very busy season for contractors, with a good demand for lumber from this section of the industry.

Putting on "Style Show" for Lumber

The season for the Spring Style shows is at hand, and in every town in the country of any considerable size, the merchants dress up their wares and display them to the public. Styles in clothing and wearing apparel, of course, are the predominating feature of the season.

Now, there is no reason on earth why the lumber merchant, if he is a real live, up-to-date merchant, should not put on a style show of his own. And he doesn't have to be big town merchant to do it. The right spirit and the right idea will put the proposition over in a little town as well as in a large city.

First, dress up your lumber store and yard, by cleaning them up and painting, and, of course, you will not overlook your own home and garden or front yard. Trim your hedges, repair your fences, turn up your grass plot and fix up your screen doors. You will find lots of odds and ends that require attention.

If you have a building store with a good sized window, there is a splendid opportunity for presenting some fine ideas in Spring Styles. You can do this either with the use of small models of buildings or by means of illustrations strikingly displayed so they will attract the eye of the passerby.

A working model of a moderate priced home can easily be constructed—all you need is a few sticks of wood, a saw, a hammer and some nails—if necessary, get a carpenter to help you, although not a great amount of skill is required. In the same way, you can build models of barns, hen-houses, garages and a score of other small structures, of a timely nature.

One of the most attractive ideas you can feature at this time is the screened sleeping porch, and it might be well to specialize on this. Of course, you have got to be prepared to furnish all the details of information to your prospective customers and for that purpose your store should be well stocked with a supply of plan books.

Supplement this window display with a good line of advertis-

A busy scene in Northern Ontario. Skidding logs in the Algoma District.

ing in your local newspaper, calling attention to the display and inviting inspection. Make use of one of the many cuts and illustration of Dealers Helps which you ought to have on hand, or, if not, which you can easily secure, if your local newspaper has none in stock.

It might not be a bad plan to call on the other lumber dealers in your town and organize a joint movement to make this style show a special feature for some stated period. By getting together on the proposition, each one will be boosting the other's game while all are boosting the building business.

Think it over, Mr. Retail Lumber Merchant. Folks are going to spend money to "keep in style." It is just as necessary for them to be housed comfortably as to be clothed fashionably, so show them the styles in buildings and in the uses of lumber.—Gulf Coast Lumberman.

Some Suggestions for Lumber Dealers

Get acquainted with farmers. You may like them.

Treat the farmer as a business man like yourself. Invite him to your local board of trade meetings. Try to understand his problems, be sympathetic.

Cultivate the farmer's confidence by a sympathetic relation toward his problems and by real service.

Supply him with practical building plans and suggestions which are not too expensive, but within his limited means. Agriculture is a large business made up of many small businesses.

Keep farmers informed as to new and good materials and prices. Advertise in local country papers and in agricultural journals. Keep modern equipment before the farmer buyer.

Small town business men and farmers must act together if the small country town is to be maintained.

Lumbermen Ask for Protection of Logs

The Corporations Committee of the New Brunswick Legislature recently referred the bill to incorporate the Miramichi Light, Heat and Power Company for private consideration. J. W. Brankley, of the Miramichi Lumber Co., and Donald Fraser, of Plaster Rock, were heard. They said they had no objection to the bill provided that the company to be incorporated be required to see that logs passed the dam. Provision for sluices in the dams was not sufficient. Men would have to be employed at the dam to see that logs went through.

Crown Timber Receipts Jump Considerably

The healthy condition of the lumber industry in British Columbia, and the substantial increase in the business done at the office of the Crown Timber Agent here, is shown by the figures for the fiscal year ending recently. The receipts for that period were \$128,137.62, as compared with \$94,686.77 in the previous year.

Even more notable is the advance in the business done last month, during which receipts were \$10,389.84, as against \$2,588.85 in March 1919.

Springtime is tonic time. For quick action and best results, try a mixture of pep, push and punch. They will stimulate ambition, energy and action and bring you a healthy business.

The Price and Packing of Shingles

One of the principal factors contributing to the present high price of shingles is the scarcity of cedar logs. This has been brought about largely by labor troubles in the camps, says The Fraser River Shingle Co., Ltd., of Vancouver, in a recent communication to the "Canada Lumberman." Wages have increased enormously and the introduction of the eight-hour day has materially reduced production. The present price of good shingle cedar is \$42 per thousand, compared with \$18, which was the prevalent price a year ago; so that if there were no other causes than this, the price of shingles would inevitably have soared considerably.

But although the scarcity of logs is the primary cause of the rapid advance in price, it is by no means the only one. In the manufacture of shingles there have also been labor troubles, and, in addition to this, 1919 witnessed the most severe car shortage ever experienced by the industry. Lack of railway equipment forced many of the mills to close down, until their sheds were clear, and a number of them are not operating now. We, ourselves, were forced to close down for about six weeks at the end of the year, and when you consider that our normal output is in the vicinity of five carloads per day, this will give you some idea of why shingles are not so plentiful as they might be.

In face of decreased supply of timber, wage increases, and difficulties of transportation, the demand for shingles continues increasing. However, with prices at their present high level, dealers are buying cautiously, and for this reason the demand is not what might be expected, considering that the need for shelter and building material was never greater. In some districts, too, on account of very severe weather conditions, building operations are not yet in full swing, but we think there is no doubt but that once the spring opens up, buying will start in real earnest, particularly when people begin to realize that the price is NOT coming down.

As far as we can see, shingle production in 1920 is not like to improve materially, as logs are becoming increasingly difficult to buy, and the car situation is not showing much sign of improvement, and so long as the present high level in wages and in other commodities keeps up we can see no possibility of reduced prices on shingles.

Upholds Shingle Packing by "Thousand"

There are always two sides to every question and here is what some exponents of the packing of shingles by the thousand, instead of the square, have to say on this important subject. One firm in Washington State has sent out the following notice.

Not until we solicited every customer we had as to whether they preferred shingles packed by the "thousand" or by the "square," did we decide to continue supplying them by the thousand basis. Over 95 per cent. of all customers we have, were against making any change at this time, and at least 50 per cent. of the largest users do not favor packing by the square at all.

It is our desire to serve our customers—good shingles—as long as we manufacture them, and give them what they want. The majority of our customers wrote something like this: "If every mill will put up shingles as good as the Rainbow brand they need not fear roofing on a competitive basis."

Now, "let's hit the ball," and get those shingles for spring trade. Don't forget that the — shingles are 100 per cent. vertical grain, 100 per cent. clear, free of sap, packed close, and equalized butts, full thickness across the butt end when dry. These shingles will cover 116 to 125 sq. ft. of space to the 1,000, according to weather exposure.

A retail dealer in the West remarks:

The writer most strenuously objects to any change being made in the method of packing shingles. We insist that the one and only way to have a good shingle roof in Oklahoma, where it is very windy, is to lay the shingles 4 inches to the weather any way and no more. We believe that shingles laid 4 inches to the weather here will last 10 years longer than if laid 4½ inches to the weather. We ask our customers to lay shingles according to this rule if they desire the best results. It is the only way we lay them on our own work. Here in Tulsa wood shingles are very much in disfavor for the reason that contractors lay them 4½ and 5 inches to the weather, and the roofs leak at the very first rain. Consequently the wood shingle gets the blame.

If laid 4 inches to the weather, 1,000 shingles or four bundles just lay one square as they are now packed, provided there are not

too many holes in the bundle. And, oh! Boy!—what a roof one gets. It absolutely will not leak during the first 25 years.

As for us, the shipper that packs the old way (and no doubt there will be many who will continue the old method of packing), will sure get our shingle business. We do not aim to recommend wooden shingles as a cheap roof, but as the best roof for the money—the most desirable roof, and to get this they must follow our directions in laying them 4 inches to the weather and nailing them well. Stains and paints will not be needed except for the sake of appearance for neither will add to the life of a real good red cedar shingle. Salesmen will not sell us any shingles except four bunches to the 1,000.

"Iron roofing, as sold by the 100 square feet, will not lay a square, and there is no reason for the argument of the shingle men for the 'square' method of packing. If there is any argument in the 'square' packing method they have it right now, if laid as we specify. I know of a dozen roofs, all new, laid 4½ and 5 inches to the weather, and they all leak.

"I say 'Lay them 4 inches' and they reply, 'Oh, 4½ or 5 inches is just as good and you get more laps.'" Then the roofs leak and I repeat what I told them previously. One old contractor was called at our office repeatedly after every rain and was told that a new bungalow he had built had leaked. When I told the contractor they wanted to see him he would say 'I am not supposed to keep their darned old house in repair.' It was a brand new house. I said, 'Well, I would hate to have them think that I was as old as you are and could not put on a wood shingle roof that would not leak.' So he would go to see the parties.

"After a widow lady had let her contract for a home I told her to see that the contractor put the shingles only 4 inches to the weather. She told me later the contractor had said he could not afford to lay the shingles as I had advised because of the way the contract was made. She said the contractor said he would put on the roof as he had figured it and would guarantee it not to leak. After the first rain after she had moved into the house I asked her if the roof had leaked and she said it had and that she had not been able to get the contractor to even come and look over the work.

"Preach, talk, advertise 4 inches to the weather, not cheapness but goodness. Put the shingles up in the old way and wood shingles will stay. In Tulsa, carloads of asphalt shingles are being sold just for the reason that all new wood shingle roofs put on there leak, and they say the wood shingle is of no account. It is all contract. They expect too much of the shingle and they do not nail them well.

How B. C. Shingle Output Grows

The shingle industry of British Columbia is increasing annually and one that is now of considerable importance to the province. The annual sales in 1919 were \$12,800,000, and this year with the increased number of mills the industry will in all probability bring over \$20,000,000 of outside money into the province.

British Columbia shingles are now shipped to every province in Canada in large quantities, and yet only a small portion of the output is consumed within the Dominion, the United States consuming a large portion, shipment being made to nearly every state. In addition to this, shingles are being shipped to Australia and New Zealand, and may possibly be shipped to the United Kingdom in the very near future.

Community Forests will be Planted

New York State will endeavor to solve its timber problem by planting community forests. Foresters from the New York State College of Forestry, Syracuse, will do the planting, but the woods will be owned by the villages, townships and even cities in which they are planted. The timber produced will be utilized eventually to supply the state's annual need for \$125,000,000 worth of lumber. Profits derived from cutting the timber will be used to pay the taxes of the communities owning them.

"Dat sho' am 'stonishin news, sah! I didn't have no s'picion yo' was aimin' to marry de Widdah Waddles!"

"Needer had I, sah, 'till I found out dat her lamentable husband done left a silk hat, fine and shiny and 'most as good as new."

Personal Paragraphs of Interest

W. T. Mason, of Mason, Gordon & Company, Montreal, is on a visit to the Pacific Coast.

The Toronto office of G. A. Grier & Sons, Limited, is now located at Room 22, 79 Spadina Ave.

Arthur H. Campbell, of the Campbell-McLaurin Lumber Co., Montreal, spent a few days in Toronto recently on business.

Ex-Senator J. P. Mackenzie, North Tonawanda, N. Y., spent a few days in Toronto recently calling upon the lumber trade.

James B. Leitch of the Wilson Lumber Co., Toronto, has been on an extended trip to various points in Quebec and the eastern States.

The death of George Blackwell recently occurred at Westmeath, Ont. He operated a sawmill at that point where he was well known.

D. H. McLennan of the McLennan Lumber Co., Montreal, was a recent visitor to Toronto and called upon a large number of friends in the trade.

F. T. Verrall, of McBean & Verrall, Toronto, who has been confined to his house for a couple of weeks with illness, is able to be around again.

C. A. Storey, manager of the local branch of the Peter McLaren Lumber Company, Limited, Brockville, passed away recently after a short illness.

Mr. and Mrs. Joseph Oliver, who have been spending several weeks in California, recently returned to Toronto and en route home paid a visit to several cities in Western Canada.

Crawford Govan, formerly with the British Timber Buyer's office in Montreal who returned to England at the end of the last year, is now at Halifax, New Brunswick. Mr. Govan is representing Cox, Long and Company, of London and Montreal.

The death of Mrs. Rolland, wife of Mr. Louis Rolland, of Blair and Rolland, Montreal, occurred recently. Mrs. Rolland passed away shortly after the arrival of her husband from France. Many friends will extend their sympathy to Mr. Rolland in his bereavement.

Elias Rogers, a widely-known coal merchant of Toronto, passed away recently in his 70th year. Mr. Rogers was born in Whitchurch Township, York County, and at the age of 21 years entered the lumber business which he followed for a considerable time, afterwards embarking in the coal industry.

Jacob Kaufman, a well-known Kitchener manufacturer, recently died in that city. Mr. Kaufman operated a large planing mill and in addition was interested in the Kaufman Rubber Co., the Forwell Foundry Co., both of Kitchener, and a large sawmill at Rosseau Falls, and chemical plant at Trout Creek. He served as trustee of Zion Church for 55 years and is survived by his wife, two sons and two daughters.

James G. Cane & Co., wholesale lumbermen, who were burned out in the recent fire at the McKinnon Building on Melinda St., Toronto, and for a while occupied temporary offices in the Bank of Hamilton Building, have secured new and commodious quarters on the first floor in the Stair Building at the corner of Adelaide & Bay Sts. The firm have just moved into their new premises which are centrally located.

George Kinnon, who for the past fifteen years has been associated with the Wm. Laking Lumber Co., Toronto, in both buying and selling capacity, has resigned and will enter business on his own behalf. Mr. Kinnon is a practical lumberman with wide experience and previous to joining the Wm. Laking Lumber Co. in 1904 was four years with the Imperial Lumber Co., Toronto. He has many friends throughout Ontario who will wish him every success in his new venture.

Frederick M. Gray, of Coldwater, Ont., who was for a long period manager of the lumber department of the Standard Chemical Co., Toronto, passed away recently at the age of 44 years. He was widely known throughout the province and for many years was associated with W. J. Sheppard, lumberman of Waubesa. He is survived by his wife, (a daughter of W. J. Sheppard), three sons and a daughter. Interment took place from his late residence at Coldwater, Ont. George R. Gray, manager of the woods department of the Spanish River Pulp & Paper Mills, Sault Ste Marie, is a brother.

Heart failure caused the death very suddenly of William Gordon, of Stratford, aged 79, who was a resident of that city for 49 years. He was mayor in 1884 and 1885 and again in 1907 and 1908. He conducted the Gordon Lumber Company, but of late had retired from active business life. Mr. Gordon left his home when 15 years of age and engaged in the drygoods business at Dundas and later at St. Thomas. He left Dundas in 1866 and opened a dry-

goods business in St. Marys. In 1870 he moved to Stratford, and engaged in business with the late J. J. Clark. He is survived by a widow, four sons and one daughter.

Mr. Alex. Gibson Dies of Pneumonia

After a week's illness from double pneumonia Alex. Gibson of Marysville, N. B., former member of the House of Commons, Ottawa, and also the Provincial Legislature of New Brunswick, passed away recently in his sixty-fourth year. He was the son of the late Alex. Gibson and was a lumberman as well as being interested with his father in other enterprises.

In 1900 he was elected to the legislature as a representative of York county, and then resigned his seat to contest the county in the general federal elections. He was declared returned by a majority of 76, but the election was protested, was subsequently voided by the court, and at a by-election, held on Dec. 24, 1901, he was re-elected by a majority of 825 over the late Rev. Dr. Joseph McLeod.

Mr. Gibson had also served as mayor of Marysville, and had taken a prominent part in the affairs of the town. He had been twice married, and, besides his widow, is survived by one son, Harry A., of British Columbia, and one daughter, Miss Mary, at home. One brother, James, of Marysville, and three sisters also survive.

Mr. Caine After Big Pulpwood Limits

Representing seven of the largest newspaper publishers in England, G. R. Hall Caine, son of Hall Caine, spent a few days recently in Ottawa.

Mr. Caine is in Canada negotiating for the purchase of pulpwood limits and pulp. The syndicate he represents is prepared to spend \$40,000,000 in insuring that their newspapers will secure an adequate and continuous supply of newsprint paper, and to this end propose to buy the pulp wood areas here and erect pulp mills. Already they have a line of freight steamers to carry the pulp across the ocean and also own paper mills in England. Briefly the scheme of the Canadian purchase is to get out the pulp wood on their own lands, manufacture the pulp in their own mills in this country, transport it to England on their own steamers and there convert it into paper in their own paper mills and sell it to their own newspapers.

Mr. Caine is a director in several English paper mill companies and also of the Saguenay Pulp and Power Company, in Canada. While he has not yet closed for the purchase of any land he is in close negotiation for an area of 1,000 square miles, which he says is suitable for his purpose and which will yield sufficient wood to keep his mills in operation for several years.

New Lumber Company Begins Operations

The North American Lumber Co., Limited, who have opened offices at 411 and 414 Continental Bldg., Toronto, have taken over the license of No. 3 timber berth, located in the northwest part of the township of Proudfoot near Algonquin Park from Mr. T. R. Black. The latter purchased the berth from the Royal Bank of Canada, and will retain a block of stock in the Company.

The North American Lumber Co. are going to commence operations right away, and have secured C. L. Williams, who is a well-known lumber merchant and operator, to oversee the cutting and sawing of the timber. A number of Torontonians have taken stock in the company, the permanent directors of which will be appointed in the near future. The limit is a virgin one and is reported to be remarkably well wooded. There is one portable sawmill already installed on the holdings of the company and another one which will soon be in operation. These will cut about 24,000 feet a day. The company are using portable mills as the lumber is taken out much easier when converted into boards and planks.

Sarnia Company Buys Valuable Limit

The Cleveland-Sarnia Sawmills Co., Limited, have purchased the 135 square miles of timber in Northern Ontario, which is tributary to the Spanish River. The company expect to begin operations on this limit early this Fall and hope to have at least three camps in operation by August 1st or earlier, if possible. The big sawmills of the company at Sarnia have started up for the season and the outlook for lumber production is very good. At present the Cleveland-Sarnia people cannot supply the demands of their customers.

Has O. B. U. Treasurer Taken Flight?

"I hear the treasurer of the O. B. U. has jumped the job with 12,000 or 15,000 bones in his jeans. If this true, it should be published broadcast," remarked a leading lumberman recently, "as the members of the O. B. U. are out to beat the workingman—that's all. They are for self first, last and always."

Lively Demand for Pit Props in South Wales

Splendid Opportunity Awaits Canadian Firms Wishing to Develop Overseas Market in Railway and Mining Timber Products—The Specifications

There is a large demand in South Wales for pit props or pitwood where mining is carried on so extensively. It is difficult to obtain the figures of importation into South Wales, but the following table will indicate the imports into the United Kingdom in 1913, a pre-war year, and 1918, the last year for which figures are available, says Norman D. Johnston, Canadian Government Trade Commissioner of Bristol, England.

	1913		1918	
	Quantities Loads	Values £	Quantities Loads	Values £
Russia.....	1,538,714	2,415,086	7,114	32,845
Sweden.....	359,988	558,095	54,511	830,570
Norway.....	114,777	200,932	33,324	508,297
Germany.....	28,926	53,550
France.....	984,331	839,065	608,061	1,576,282
Portugal.....	315,538	278,154
Spain.....	103,123	90,972
Other foreign Countries.....	5,931	9,212
British posses- sions.....
Total.....	3,451,328	4,445,066	703,010	2,947,994

Up to 1914 the chief supplier of pit props or pitwood to the United Kingdom was Russia, and France, Sweden, Portugal and Norway were large sources of supply. Spain and Germany also shipped fairly good quantities. During the war, however, France was the largest shipper, while Norway, Sweden and Portugal also did a good trade, with smaller amounts coming from Russia and Spain. In 1918, France, Norway, Sweden and Russia were the only suppliers. From 1914 to 1917 the British Possessions became the source of supply for fairly good quantities, Canada having shipped 146 loads in 1914, 12,383 loads in 1915, 21,545 loads in 1916, 1,280 loads in 1917, and Newfoundland and the Coast of Labrador 6,218 loads in 1914, 86,404 loads in 1915, 81,148 loads in 1916 and nothing in 1917 and 1918. No imports arrived from Canada in 1918. English pit props are also largely used.

The sizes required are:—

- 6½ feet long by 4 inches to 6 inches in diameter.
- 9 feet long by 5 inches to 8 inches in diameter.
- 13 feet long by 6 inches to 10 inches in diameter.

The principal woods being used at present are English oak, spruce, ash, beech, larch, French fir and Norway pine.

Recent quotations for French pit props have been 87s. 6d. to 92s. 6d. per ton ex ship Cardiff.

Shunting Poles

Large quantities of shunting poles are used in South Wales and in fact all parts of the United Kingdom on the main railroads, branch lines and private sidings. They are generally 5 feet 6 inches long by 1½ inches in diameter and are tapered to a point. The hooks and ferrules are attached in this country.

These shunting poles are made extensively in the United Kingdom but they can be imported more cheaply, principally from the United States. The present English oak price is 36s. per dozen for grade one, while the price in the United States in hickory is \$3.82 per dozen, which cost in the United Kingdom to-day about 22s. per dozen for first grade, and 19s. per dozen for second grade. They are usually packed in bundles of one dozen. One firm alone in South Wales imports 500 dozens at a time.

The first grade is used for railroads and has to pass the Board of Trade tests as to quality and strength which is a very stringent test.

The second grade is used for collieries and works for which there is no special test beyond the usual quality and strength required.

Railroad Sleepers

It goes without question that great quantities of sleepers, or ties, as they are called in Canada, are required for the railways. English

woods are largely used, but an idea of the quantities imported may be had from the appended table.—

	1914	1915	1916	1917	1918
Sleepers from—	Loads	Loads	Loads	Loads	Loads
Western Australia ..	3,557	1,109
Russia	106,096	36,246	27,496	9,828
Sweden	34,791	32,197	31,793	8,303	3,039
Germany	69,045
Portugal	2,340	1,867	1,512
United States	1,229	105,890	155,226	1,025
Other foreign countries	3,557	2,561	930	275
Western Australia ..	1,591	3,914	2,701
Canada	12	330	8,816
Other British pos'sions	138	133
Total	216,321	181,276	229,435	21,298	4,551

In 1914, Russia supplied the largest quantities with Germany second and Sweden third. In 1915 and 1916, however, the United States took the leading position, while in 1916 Canada did quite a good trade. It is necessary that all Canadians who are in a position to export should supply the sleepers according to the special railroad specifications.

Railroad Keys

There is also a very large market for railroad keys which are used on railroads in the United Kingdom. They are made of hardwood and are approximately 7 inches long by 3¼ inches by 2¼ inches. If any Canadian manufacturer desirous of doing a trade in these railroad keys will communicate with this office information will gladly be given as to exact dimensions, shape and other particulars.

Shovel Handles

Great quantities of shovel handles are bought in South Wales for mining railroad work. The Crutch type of shovel, straight, bent and tapered is mostly used in this district. The present price for imported handles is 8s. 6d. per dozen for the 30-inch straight, 11s. 6d. per dozen for the 30-inch bent, and 11s. 9d. per dozen for the 30-inch bent and tapered crutch shovel handles, Cardiff Docks. This office will be pleased to put Canadian concerns wishing to develop the market in any of the above mining or railroad timber products in touch with a firm or firms desirous of importing from Canada.

Ontario's Large Receipts for Coming Year

Ontario's total receipts for the fiscal year ending October 31, 1920, will be \$20,211,378.88, according to estimates submitted by Hon. Peter Smith, Provincial Treasurer, in connection with his budget speech in the Legislature recently.

Ordinary expenditure for the year is estimated at \$17,044,830.33, while capital expenditure brings the total up to \$17,932,830.33. This leaves a balance of approximately \$2,300,000.

Supplementary estimates to be introduced later in the session will probably consume from \$1,800,000 to \$2,000,000 of this amount, which will leave the Province with a small surplus. The estimated revenue from lands and forests for 1920 is \$1,750,000. The expenditure for 1920 is set at \$1,417,569 for lands, forests and mines.

A type of sectional portable house that is meeting with a wide demand at home and abroad

Some Lumber Congestion at Sussex

An immense quantity of lumber has been hauled to Sussex, N. B., during the past winter and this spring for shipment by the C. N. R. and the yard is piled full in all directions. Already over a hundred cars have been loaded and sent to their destinations. But this is only a drop in the bucket, compared with what is to follow as fast as cars can be obtained. For a month there was an embargo on lumber being shipped to St. John and for over two months to the United States. This was on account of the congestion of freight which had to be taken care of before any more could be handled. Now that the embargo has been removed business has been getting brisk again.

At what is known as the Tannery siding, the loading wharf near the engine house and the military siding all are busy centres for lumber shipment. At the military siding the cuts of Edward Connely at Elm Vale, about a million feet, William Quirk a half million feet, John McAulay in the vicinity of a quarter of a million, were loaded as was also the cut of J. Prescott, which was a large one. From the railway yards the cuts of S. H. White Co., King McFarlane, Bliss Dysart and others are being shipped, consisting of one, two and three inch lumber.

On account of the good roads during the winter and the snow staying on so late in the spring it was possible for the operators to get a much greater quantity of lumber hauled to Sussex for shipment than usual.

The necessity of a railway spur to the plant of the Sussex Manufacturing Company is very noticeable from the fact of so many cars of lumber arriving here to be dressed, that is planed and matched and tongued and grooved. This lumber has all to be hauled by teams from the railway yards and brought back again and placed in the cars it has been taken from. This one item in saving of cartage would alone make a nice profit.

Under the supervision of Evans Kyle sixty cars of lumber have been loaded which contained something over a million feet. Immense quantities of lumber still remain to be shipped. Most of it goes to St. John, but a considerable quantity is billed for the United States, where there is an exceptional demand for lumber.

Making Southern Ontario More Productive

Southern Ontario has some three million acres of private woodlands and over three million acres of waste areas which can only be made productive by reforestation, says E. J. Zairts, Provincial Forester for Ontario. This older portion of the Province has about nine per cent. of indifferent woodland, with many townships having less than five per cent. of woodlands. While only of relative importance, it should be pointed out that none of the important countries of Europe are so low in percentage of woodlands. Italy has fifteen per cent., France had about eighteen per cent., and Western Europe may be said to have from fifteen to twenty per cent. of forest area. So far as the chief forest products, such as building materials, railway ties and pulpwood supplies, are concerned, Southern Ontario is absolutely dependent upon outside sources. The wood-working industries of Southern Ontario are largely dependent upon supplies of the more valuable hardwoods from the United States. We are fortunate in still having supplies of soft woods in Northern Ontario. These supplies are becoming increasingly inaccessible and

costly, so that it is a common sight to see Southern pine and British Columbia lumber successfully competing with our native pine for building purposes and construction. We are informed by the Forest Service of the United States that the virgin supply of Southern pine can only last about fifteen years, and it is certain that the United States will soon cease to export valuable hardwood in any quantity.

The woodworking industries of Ontario use approximately twenty million dollars' worth of raw materials. It is urgent that we make sure of the future supply of wood for these industries.

The census of 1911 gives the value of firewood and fence posts used in Ontario at \$5,700,000. A large proportion of this material comes from the three million acres of private-owned woodlands in older Ontario. While many people are fortunate in being able to secure anthracite coal, a large proportion of our rural population depend almost entirely on wood as fuel. The frequent repetition of coal shortages should make us seriously consider the necessity of developing a policy of producing wood crops upon every foot of non-agricultural soil in this older part of the Province.

What, then, is the forestry problem for Southern Ontario? Protection and improvement of the remaining woodlands; the replanting of waste areas held by private interests, and the reforestation of the larger areas of public lands existing in older Ontario.

The improvement of forest conditions on lands held by private owners is a most difficult problem. Private forestry on small holdings has proven unsatisfactory even in the older countries of Europe, because of the long time element in producing a crop. Artificial stimulus by remitting taxes has been tried in many counties and has failed. We have an Ontario statute giving municipalities power to remit taxes on woodlands, but no evident result has been accomplished.

Shipping Lumber in Japanese Squares

"A very promising sign in the lumber business just now is the very extensive lumber inquiries we are getting from Japan," said Mr. C. E. Huddart, manager of the Associated Timber Exporters of B. C., Vancouver.

"A great many orders have been placed at the mills for Japanese shipments and the offering of Japanese tonnage is increasing very largely. Most of this lumber goes over in what are called Japanese squares. They resaw these squares in Japanese mills in the same way that we use the round logs here. The Oriental trade is showing a decided increase, and during the last 20 or 30 days inquiries have greatly increased."

Speaking upon the general lumber situation, Mr. Huddart said enquiry for export lumber was coming in a volume many times larger than it was possible for the capacity of the mills to take care of. These enquiries were for foreign shipments by water. Compared with last month the ratio was about the same as far as the orders placed with the British Columbia mills was concerned. "Quite a number of mills have business booked up to June," he added. "There is plenty of tonnage now for anything the mills can take care of and tonnage generally is loosening up. There is much more United Kingdom tonnage. We are working on a large order of railway sleepers for the United Kingdom and these will be shipped during the balance of this year."

Seller of Trees is Now in the Saddle

Can Dictate Prices for the Future to the Buyer Declares

Leading Eastern Authority

Frank J. D. Barnjum of Annapolis Royal, N. S., in a recent letter to the "Gleaner" of Fredericton, N. B., says:

My attention has only just been called to a letter by an anonymous correspondent who signs his communication "Fair Play," that appeared some days ago, in which he questions the benefit to be derived from my suggestion of placing an embargo on the shipment of fee land pulpwood across the line, to be manufactured into pulp and paper by our neighbors in the United States at an enormous profit to them.

Well, sir, to be perfectly frank, I should think the present prices of lumber and laths would be a sufficient embargo against the cutting of pulpwood to satisfy any reasonable man, for with lumber selling at \$40 to \$65 per M. and laths at \$12 to \$15 f.o.b., I do not see how any one can afford to cut for pulpwood; and, as I am a buyer of wood for my own mills, I cannot be accused of any selfish motive in making this statement, but I feel that in the long run what is best for the country is best for the individual.

If a man cannot get \$15 to \$20 per M. stumpage out of standing timber at present day prices, he had better let it stand, as the time is just at hand when he will get this and much more. I am cutting very little on my own land, with the advance in view but sufficient to demonstrate that on a small growth of wood there is \$20 per M. stumpage. With lumber selling at from \$40 to \$65 f.o.b., if an operator cannot net this stumpage there is something wrong with his operating. A cord of four-foot wood will saw out about 3,000 laths or \$36 to \$45 per cord less \$2.50 per M. for sawing. So there is much more money in laths than in pulpwood, even in the small growth, though you can really put anything into lumber down as small as timber ought to be cut as our supply of standing timber is dwindling at an appalling rate.

In your Province of New Brunswick it is safe to say that you have lost at least 30 per cent. of your stand of fir and spruce by the present attack of the spruce budworm alone, as not only has 60 per cent. to 75 per cent. of your fir been killed, but also quite a large amount of spruce as well. I know of one tract that runs 85 per cent. spruce and only 15 per cent. fir, where every living thing has been killed, both spruce and fir, and the Province as a whole, will, of course, run 40 per cent. or more to fir. The saddest part of all is that in the devastated territory even the smallest seedlings have been killed.

With this tremendous shrinkage in the supply of standing timber, how long are we going to continue to be simply "hewers of wood," and keep on trading our birthright for a mess of pottage? It is now wholly up to every individual who owns a living tree whether he obtains what it is worth or not. The buyer has had his innings, and the seller of trees is now in the saddle and will dictate prices for the future.

Land and stumpage and lumber and wood have had a smaller increase in price than most other commodities, while, as a matter of fact, they should have increased more than anything else on account of the rapidly diminishing supply. It has simply been a question of lack of education along these lines.

The future cut on Crown lands in New Brunswick will need to be reduced by at least one-half or it will be a treeless Province in a very few years. This can be accomplished without reducing the revenue of the Province, by simply increasing the stumpage to a point that will even more than offset the 50 per cent. shrinkage in the cut. This will be no hardship to the lumberman as he will simply pass the cost along in his price for lumber; and, as lumber has increased less than other building materials, it is only fair that this should occur.

"I think that I shall never see
A poem lovely as a tree,
A tree whose hungry mouth is prest
Against the earth's sweet flowing breast.
A tree that looks at God all day
And lifts her leafy arms to pray.
A tree that may in summer wear
A nest of robins in her hair;
Upon whose bosom snow has lain,
Who intimately lives with rain.
Poems are made by fools like me,
But only God can make a tree."

Says Lumber Co. Trespassed on Limit

That the United Grain Growers' Lumber Company at Hutton have been trespassing on an adjacent limit was the statement brought out in the British Columbia legislature in the discussion of a motion recently by Mr. Giolma, asking for the return of correspondence in connection with the sale of timber limit X1753 at Hutton.

Mr. Pattullo said he had no objection to showing the member all the correspondence, but it would be a mistake to submit it all

to the House, because there were one or two reports of a confidential nature.

Mr. Hanes held that it was in the public interest that the correspondence should be brought down, because people bidding for timber limits wanted to know what treatment they were going to get.

Mr. Ross said it seemed to him that the net result of the government's action was to put a premium on trespassing, since in this case as a result of trespass a sale was withdrawn. The small logger would go away and this piece of land at some later stage would fall into the hands of the big company.

The motion for the return was defeated by 23 votes to 15.

The Earliest Recorded Timber Transaction

George H. Montgomery, K. C., of Montreal, the brilliant counsel for the Canadian paper manufacturers in presenting their side of the newsprint question before Controller Pringle during the period that price regulations was the order of the day, is an effective and original public speaker. At the annual meeting of the Canadian Pulp and Paper Association he dwelt upon the relations between producer and consumer and found his facts on Biblical love. Mr. Montgomery took as his text I Kings, verses 8 to 12:

"And Hiram said to Solomon, saying, I have considered the things which thou sentest to me for, and I will do all they desire concerning timber of cedar, and concerning timber of fir.

"My servants shall bring them down from Lebanon unto the sea; and I will convey them by sea in floats into the place that thou shalt appoint me, and will cause them to be discharged there, and thou shalt receive them; and thou shalt accomplish my desire, in giving food for my household.

"So Hiram gave Solomon cedar trees and fir trees, according to all his desire.

"And Solomon gave Hiram twenty thousand measures of wheat, for food for his household, and twenty measures of pure oil; thus gave Solomon to Hiram year by year.

"And the Lord gave Solomon wisdom, as he promised him; and there was peace between Hiram and Solomon, and they two made a league together."

That chapter is not only of interest in discussing the earlier description of the logging industry, including the drives, but it is of interest at this time in particular in discussing the relations which should prevail, and which have not prevailed in the past, between the consumer and the producer."

Old Cannon Ball Imbedded in Log

An old-fashioned cannon-ball of the twenty-five-pound variety, used many years ago on the Coast by the admiralty ships when first making surveys of these waters, was the cause of stripping one of the saws at the plant of the False Creek Lumber Company's plant, Vancouver, recently. The accident cost the company \$250 and is the second of its kind that mill men in British Columbia have experienced in recent years.

The cannon ball was embedded in the centre of a great log which had been cut at Duncan Bay on Merrill Bing & Moore's limits, having evidently been discharged by a passing warship many years ago. The tree had grown right around the missile, concealing it so perfectly that it was not discovered until the saw struck it.

About five years ago another mill met with a similar experience, the tree having come from the same vicinity on the east coast of Vancouver Island.

Will Cut Ten Million Feet at Port Arthur

The Pigeon River Lumber Co., whose mills are at Port Arthur, Ont., expect to turn out about 10,000,000 feet during the coming season, principally of pine and spruce. On account of the scarcity of labor the company may not get as many logs as they expect. In addition to their cut of saw logs the company will have approximately 200,000 ties and 8,000 to 10,000 cords of pulpwood. D. J. Arpin, of Grand Rapids, Mich., President of the Pigeon River Lumber Co., spent a few days recently in Port Arthur looking over the situation for the coming season.

Houses Scarce in Smaller Towns

The housing problem is said to be very serious not only in the larger cities but in the smaller towns as well. In places of four and five thousand population there is a great skirmish for domiciles. Rents have advanced enormously and dwellings which a year and half ago did not command more than \$12 to \$15 a month, are now eagerly sought after although the figure for the same is \$30 to \$35 a month. One authority points out that it takes from two to two and a half times as much money to erect a house now as it did in 1913, but people must have shelter.

Some Fire Losses and Their Causes

When Will Some One Come Forward with Method Preventing Individual Carelessness?

Much has been said by some ardent fire protectionists against the use of wooden shingles as a roofing material, that a large portion of the fires would never have happened if the wooden shingles had not been so generally in use. Some have even gone so far as to advocate legislature to abolish the wooden shingle for roofing material, as a great measure for lessening the enormous fire losses of the country.

Now comes forward the National Board of Fire Underwriters, with a statement of fire losses in the United States for 1917 and 1918, with the causes of the fires, with a total loss for the two years of \$514,785,141.00.

Cost of Fires by Cause in the United States in 1917 and 1918

Cause	1917	1918
Defective chimneys and flues	\$ 12,202,161	\$ 11,985,782
Fireworks, fire crackers, etc.	221,904	279,391
Gas, natural and artificial	2,188,471	2,743,080
Hot ashes and coals, open fires	2,040,699	3,213,075
Ignition of hot grease, oil tar, wax, asphalt, etc	753,515	1,024,637
Matches, smoking	15,406,165	16,453,562
Open lights	4,293,237	3,902,624
Petroleum and its products	5,920,412	6,471,119
Rubbish and litter	777,070	446,973
Sparks on roof	6,979,386	6,703,037
Steam and hot water pipes	438,671	354,828
Stoves, furnaces, boilers and their pipes	12,417,166	12,234,455
Explosions	1,774,157	3,197,807
Electricity	19,885,522	20,780,307
Exposure	43,457,096	63,735,399
Sparks from machinery	6,923,113	7,775,772
Incendiarism	2,703,106	2,985,541
Lighting	9,055,304	9,509,499
Miscellaneous known causes	3,363,497	6,111,123
Sparks from combustion	4,633,347	4,901,123
Spontaneous combustion	9,969,811	10,258,036
Unknown causes (probably largely preventable)	66,214,290	88,035,931
Total	\$231,628,040	\$283,103,101

While the statement makes no reference to wooden shingles it will be noted that the only cause of fire that could be attributed to them is the one of "Caused by Sparks on Roofs," which in the two years amounted to only 2.66 per cent. of the total loss, and no sane person could say that the sparks on roofs that were the cause of fire were all on wooden shingle roofs—thus it is proven by the National Board of Fire Underwriters in their statement, that only a very small proportion of fires originated from the use of wooden shingles.

Unquestionably the greatest cause of the enormous fire losses is carelessness, both individual carelessness and carelessness in construction.

Defective construction of chimneys and flues could easily be overcome by greater care on the part of the builder. The retail lumbermen of the country should see that the Standard Building Ordinance, as published by the National Lumber Manufacturers' Association of Chicago, is either adopted or followed very closely by their city authorities when planning a city building ordinance.

The over enthusiastic fire protectionists who have been so keen to lay all blame possible to the "evil wooden shingle" should "stop, Look and Listen" and at least not exaggerate so strongly on wooden shingles as a cause of fires. If someone will please come forward with a method of preventing individual carelessness they will not only be doing a great good to humanity, but materially reduce the annual fire loss.

Why Schroeder Company Burn Slash

All forestry authorities agree that our great problem in Canada, in the conservation of timber resources, is the forest fire. It is almost as generally admitted that slash, left in the woods after logging operations, has been the contributing cause of most of our serious fires. The slash very often causes a comparatively harmless ground fire to develop into a crown fire which destroys miles of green timber.

Forestry practice in Europe has, for many years, included the disposal of slash in all logging operations, but operators in Canada until recently, were loath to adopt such measures. It is, therefore, gratifying to find some companies now voluntarily carrying on slash-burning purely as an insurance against fire.

The Schroeder Mills and Timber Co., with headquarters in Milwaukee, and operations in Ontario, Florida, and Michigan, has evidently decided that slash-burning is good business. This company, in its operations south of the French river in Parry Sound district, Ont., last spring, burned the slash in especially vulnerable places, such as around camps, along "cadge" roads, and belts along their remaining green timber. The walking boss of the company, in conversation with an officer of the Commission of Conservation said

that, after spending a considerable sum of money on this work, he thought the company might object to the expense involved, but he was informed by them that they considered it the best form of fire insurance. The men on the ground now agree with the head office in this policy, and the work is to be carried on in the future, probably more extensively.

The experience of this company should assist in securing co-operation from operators, if slash-burning is, at any time in the future, made compulsory. If, eventually, lumbermen regard such measures, not as coercive, but as protection to themselves, while a benefit to the country at large, forest administration and forest utilization will find much in harmony. Such harmony is absolutely necessary if conservation of Canada's timber resources is to be made practical.

Making Effective Use of Plan Book

The Western Retail Lumbermen's Association of Winnipeg have completed a new plan book entitled: "Better Buildings." One hundred thousand copies of the book were printed by the offset process. The designs are photographs of houses erected in Western Canada, and, for this reason, are particularly adapted for sales purposes. Before the book was printed more than 80,000 copies were sold to various members of the Association, who distribute their copies to prospective builders and prosperous farmers in the community which they serve.

The Association has also published a small booklet which contains the bills of material for each of the designs shown in the book. This enables a dealer to figure the material for each of the designs on his retail prices, and to quote a lump sum for the material contained in each of the houses. The retailer is thus able to get away from the old idea of selling houses at so much per 1,000 feet, which is the modern method of lumber salesmanship. The Association also provides the blue print working drawings for each of the designs at a cost of \$1.50 per set, enabling the retailer to compete with any of the direct to consumer concerns.

The "Better Buildings" plan book cost more than 18c each to print and publish, but by the sale of advertising space to concerns handling building commodities of interest to the farm trade, the Association is able to supply the books to the members at 12c, instead of 18c.

Among the dealers who have already distributed a portion of their books, it is learned that the book has been the means of clinching the sale of a number of house bills, and it is recognized that the "Better Buildings" book is one of the most practical and valuable sales mediums which the Association has published.

Sulphite Pulp Companies are Extending

It is understood that the Riordon Pulp & Paper Co., who recently increased their common stock capitalization from \$4,000,000 to \$6,000,000, intend greatly extending the capacity of their plants owing to the acute demand for sulphite pulp and more particularly the bleached variety. It is reported that the company has recently placed some contracts for bleached sulphite at as high a figure as \$200 per ton. There are only two other large concerns in Canada producing bleached sulphite and these are the Whalen Pulp & Paper Co. in British Columbia and the Fraser Companies in New Brunswick. The latter intend erecting a new sulphite pulp plant as well as a paper mill at the Narrows on the Tobique River. A new company will be formed for that purpose, known as the Fraser Paper Co., Limited, with a capital stock of \$5,000,000, divided into 50,000 shares of 100 each, and the company are asking power to increase the capital stock to \$10,000,000, from time to time as required. The company will also build a large power plant at the Narrows. If the project goes through, as seems likely, the establishment of a newsprint mill by the Fraser Paper Company will make the first venture of its kind in the province of New Brunswick. It is understood that 1,000 hands will be required to operate the plants and a new town is likely to spring up in the parish of Perth. The outlay represented in power development, pulp and paper mills on the Tobique River will be in the vicinity of \$15,000,000.

Riordon Company Increases Capital

The shareholders of the Riordon Pulp and Paper Company have approved the increase of the capital from \$4,500,000 to \$6,000,000, the new shares to be issued at the price of \$125.00. The directors believe that the large demand for pulp and paper will enable them to use the new capital to great advantage. At the annual meeting the following officers and directors were re-elected: Charles Riordon, president; Carl Riordon, vice-president; F. B. Whittet, secretary-treasurer; J. W. Wheeler, T. J. Stevenson, J. S. Douglas, J. B. White, C. B. Thorne, G. G. Bancroft, and T. E. Warren, directors.

What Mill Hands at Campbellton Request

An agreement has been proposed between the lumber companies of Campbellton, N. B., and the employees of the mills. The agreement if ratified by both parties is to continue in force for one year and, after that period, from year to year unless either party gives thirty day's notice prior to the expiration of any one year.

Among the conditions set forth in the busy thriving eastern lumber centre is that a day's work is to constitute nine hours. All overtime is to be paid for at the rate of time and a half and there shall be no bonus; neither shall there be any daylight-saving time to be worked. On Sundays, Labor Day, Christmas, New Years and Good Friday if the mills run the employees are to be paid double time. The companies which are interested in the proposed agreement are Shives Lumber Co., Limited; Richards Mfg. Co., Limited; W. H. Miller Co., Limited; Fraser Lumber Co., Limited; Dalhousie Lumber Co., Limited; Sidney Lumber Co., Limited; P. Q. Lumber Co., Limited; Restigouche Boom Co. and A. Barberie. Those with whom the new agreement has been made are the members of the Restigouche Waterfront Workers Local 1110, L. L. A.

The following is the suggested scale of wages covering all departments of the mills:

Band sawyers with nigger	\$8.00
Band sawyer	6.00
Band re-sawyer	6.00
Rotary sawyer with nigger	8.00
Rotary sawyer	6.00
Band saw filler without helper	14.00
Gang sawyer	6.00
Band or rotary steam setter	5.00
Helper on rotary carriage	5.00
Band or rotary hand set	5.00
Round saw filers	6.50
Round saw filers helpers	4.50
Edgermen	5.00
Edgermen helpers	4.50
Tailing out at edger	4.75
Kendel gangmen	6.50
Sorting deals behind gangs	5.50
Sorting lumber at survey tables	4.75
Lath sawyers	5.00
Machine sawing more than 10 M. to have full crew	
lath bunchers	4.50
Handy men such as millwright helpers, assistant foremen, pop sawyers and helpers, etc.	5.00
Shingle sawyers	.35 per M
Shingle bunchers	.32 per M
Shingle sappers and cut off men	\$5.00
Shingle inspectors	5.00
Taking out shingles	4.50
Shingle branders	4.40
General labor	4.00
Deal markers	5.00
Board markers	4.50
Yard tallymen	5.00
Mill engineers	7.00
Assistant engineers	5.75
Firemen	4.00
Blacksmiths	7.00
Pulpwood barkers	
Small barkers	4.00
Large barkers	4.75
Deal pilers, millyard men and teamsters	5.00
Night watchmen	5.50
Inside ship men, men working in hold and deck men	
75c per hour, not less than 4 men in hold	
Outside ship men	60c per hr.
15 deal to a sling load, boards and scantling to average same as 15 deal.	
Loading cars. For loading lumber	50c. per hour
two men inside of car and outside man	40c per hour
Mill boom men	4.75
Raft men.	
Sorters, with board	5.00
Slingers, with board	4.75
Pikers, with board	4.60
Shoving down	4.25
Men in charge of rafting crowds	5.25

Remember that fix-up and brighten up, like charity, "begins at home." Put your own house in order before calling on your neighbor to do likewise.

South Africa Wants Canadian Basswood

The Stratford Mfg. Co., Stratford, Ont., who are large manufacturers of step and extension ladders, woodenware and other lines, recently received a request from an enterprising and well-known firm in South Africa for Canadian basswood. Anyone interested in a proposition of this kind is invited to get in touch with the Stratford Mfg. Co. or write direct to Lensvelt & Co., Limited, Box 2651, Johannesburg, S. A.

It is well known that basswood is very scarce at the present time, yet perhaps there may be some producers who would like to get this line of business started with South Africa so that if at any time things should go a little slack in Canada, the mills will have an outlet to fall back upon.

Speaking of Messrs. Lensvelt & Co., it is pointed out they want clear white or selected basswood, winter cut, of course, from 12 ft. and upwards in length, 12 in. wide and 1 in. thick. The South African firm are in a position to handle any quantity up to a shipload, and any person in a position to quote on the stock would make quotations f. o. b. Montreal or West St. John. The financing would be arranged by Lensvelt & Co. with their Canadian confirming house, Messrs. Kidston, Limited, of Montreal, or through their New York houses, and the funds would be payable in Canadian money. If the foregoing dimensions in basswood cannot be supplied, the company would like to know what Canadian producers can give them in the way of widths and lengths.

What Standard Order Forms Would Do

"I was glad to see those order forms you published in the last edition of the 'Canada Lumberman,'" remarked a Hamilton yardman. "I sincerely hope that the Ontario Retail Lumber Dealers' Association will succeed in drawing up a standard form that will be acceptable and suitable for all purposes. It would help the wholesaler and the retailer to go straight when things get going wrong at either end. An efficient, well balanced order form would make clean skating and would eliminate many danger spots for all hands during the next year or so."

The Value of I. C. R. to Lumber Industry

In considering the Intercolonial Railway as a national asset, Mr. W. C. Milner argues that its value in developing the country through which it passes is often overlooked. He points out that the construction of the line has resulted in opening up the country, and specifies the pulp and lumber industries as instances of the splendid development which has followed the construction of the line. The credit (says Mr. Milner) for this enormous change must be given to the French Canadian. He is the pioneer of this extensive region, with his axe on his shoulder he has penetrated these wilds, and made homes by the thousands. The pluck, hardihood and industry he exhibited are even more admirable than the great pioneer emigration from the Ohio to fill up the wastes west, from which great states have been created—because the climatic conditions the Canadian faced were more severe.

The employment of these people is generally two fold—agriculture and lumbering. The latter is a great aid to farming in its earlier stages, as it gives employment during the idle months, and makes a cash return. Piles of sawn lumber are seen along the tracks and piles of pulpwood awaiting shipment to the United States.

The following is a summary of the towns created along the line, and the pulp and lumber plants erected: St. Alexis, 1 sawmill; Routherville, pulp wood; St. Florence, rossing plant; Causapscal, 7 saw mills; Lac au Saumon, 44 saw mills; Amqui, 4 saw mills, 1 door and sash factory; Val Brilliant, 2 saw mills, 1 dressing plant; Sayabec, 1 lumber mill; this place ships 3,000 car loads per season; Sauciers Sid-ing, 3 saw mills; St. Moise, 4 saw mills, 1 rossing plant; Padoue, 2 saw mills; Little Metis, 1 carriage factory, 1 saw mill; St. Octave, 2 sash and door factories; Mont Joli, 1 sash and window factory; Luceville, 5 saw mills.

The above places are wholly dependant on the I. C. R., and did not exist before the construction of the line. In addition to the factories and industries mentioned, nearly all these places ship quantities of pulp wood.

St. Anacett, 1 planing mill; Rimouski, 1 saw and shingle mill, 1 pulp mill, 2 small saw mills; Sacre Coeur, ship pulp wood; Bic, 1 rossing plant, 1 saw mill, 1 planing mill; St. Fabien, 2 sash and window factories, 6 small grist and saw mills; St. Simon, 2 shingle mills, 3 saw mills; Trois Pistoles, 4 shingle mills, 4 wooden ware factories; Tobin, 2 lumber and shingle mills, (about ten million feet of lumber shipped per season); St. Eloi, 1 sash and window factory; St. Arsene, 6 small saw mills; Cacouna, large shipments of pulpwood.

His Tender Was Not Sufficient

Joseph Notkin was ordered by a judgment of the Superior Court, rendered by Mr. Justice Tellier, of Montreal, to pay \$414.12 with interest and costs, to Joseph Louis Bruno Leclair et Frere, Montreal, the capital sum being the balance of an account due in payment for a quantity of wood supplied and delivered to defendant by the plaintiffs.

Defendant admitted having received the lumber, but he objected to paying the balance of the account, he said, because plaintiffs would not furnish him with a detailed statement when he asked for it. He complained that he received details of the account only when the writ was served on him. Thereupon, after verifying the account, he offered to pay the money, but it was refused. He accompanied his present plea with a tender for the amount asked for.

The only outstanding question for the court, therefore, was one as to costs. Mr. Justice Tellier pointed out that the wood was delivered in fifteen lots, and with each there was a separate statement, so that defendant was supplied in duplicate with all the details he required. It was not because details were lacking, the Judge said, but really because defendant objected to the prices charged that he refused to pay the balance of the plaintiff's account. In the circumstances, the Court held that defendant's present tender of \$414.12 was not sufficient, and order was made that Notkin pay this amount, and in addition, interest from the date the action was taken, and the cost.

In Recognition of Patriotic War Service

The Eisendrath Glove Co., of Chicago, Ill., has a certificate of merit made through the War Department by George W. Burr, Major General, Assistant Chief of Staffs and Direction of Purchases for the United States.

The citation to the Eisendrath Glove Co., issued by Major General Burr, reads as follows:

"This firm rendered very satisfactory service and displayed willingness to co-operate with the Government in the fulfillment of its contracts. Prompt deliveries were made and high grade gloves furnished.

"It is very gratifying to me to be enabled to transmit this visible recognition of patriotic war service," concludes the U. S. Director of Purchase, Storage and Traffic.

Solving Power Transmission Problems

The Main Belting Company of Canada, Limited, Montreal, Toronto, Winnipeg, Edmonton and Calgary, have issued a circular drawing attention to their consultation and advisory engineering department, and inviting consultation upon any problems involving power transmission or conveying of materials. The company state that they maintain a competent technical staff, continually employed in the solution of problems of this sort. It is pointed out that Leviathan-Anaconda Belting is particularly well qualified to render the strenuous service demanded in pulp and paper mills, saw mills, etc.

Tribute to Canada's Timber Industries

The demand at present being made upon Canada for timber and timber products is unprecedented, and, even so, is steadily increasing, says the "Timber Trades Journal" of London, Eng. The United States depends today upon Canada for one-fourth of its news print. The United States imports besides 15 per cent. of its pulp from Canada, many millions of feet of timber in the shape of boards and other building timber. Great Britain has recently placed orders for lumber in Canada totalling 200,000,000 ft., and it is estimated that France and Belgium will require 25,000,000 ft. of lumber. Fortunately, the supply upon which both Europe and America are drawing so freely shows no sign of exhaustion. It is estimated that in British Columbia alone the quantity of timber cut each year may be increased by 500 per cent. There are at present 3,000 timber and wood pulp plants in operation in Canada whose total output runs to enormous figures. Scientific forestry work is being carried out on a large scale, and stations are being established to study the situation with the idea of increasing production and also maintaining the forests.

Schroeder Company Extending Operations

Definite arrangements have been completed whereby the Schroeder Mills and Timber Company, of Milwaukee, Wis., take over the management of the logging, railroad and sawmill operations of the Manasota Lumber Corporation, in Manatee County, Fla.

Quite extensive changes and improvements at the sawmill are already in progress. New machinery will be on the ground and be installed in about 90 days. W. P. Barr has been appointed manager in Florida, and F. K. Webb, engineer in charge of reconstruction.

This plant will be under the general direction of W. J. Merkel, of the John Schroeder Lumber Co., vice-president, in charge of operations for the various Schroeder interests. The building of the new sawmill at Manatee, Fla., by the Schroeder Mills and Timber Co. has been temporarily delayed pending adjustments of title to the mill site location.

Charges Heard Against Lumber Scaler

An investigation was held by the Forestry Board in the Bathurst Court House recently of charges preferred against Edward Baldwin, a forest ranger in the employ of the N. B. Crown Land Department, by his assistant, Albion Doiron, whom he had discharged.

The board which sat at the investigation consisted of Hon. Dr. E. A. Smith, Minister of Lands and Mines for New Brunswick; Col. T. G. Loggie, Deputy Minister; A. T. Murchie, chief lumber scaler; L. A. Gagnon, chief game warden, and G. H. Prince, provincial forester.

Three charges against the accused were investigated, as follows:

That he had received a live pig as a present, while in the course of his duties, which he had kept at a camp on the Bathurst Lumber Company; that he had falsified his diary, and that he had under scaled lumber cut on the Crown lands of the province by the Bathurst Lumber Company. A fourth charge, connected with the killing of a deer, was withdrawn.

Col. T. G. Loggie, Deputy Minister of Lands and Mines, conducted the examination of the large number of witnesses who were called. Hon. Dr. Smith announced he would announce the decision later.

Newsy Briefs From the Busy East

To Stetson, Cutler & Company, of St. John, N. B., goes the honor of having the largest lumber shipment in that section of the country during the year 1919. The list was only recently compiled and was not made up in time for the recent lumber records, shipments, etc., which appeared in the "Canada Lumberman" of March 15 issue.

During the year this firm shipped nearly sixty-one million feet as follows:

	Feet
Foreign water shipments	53,684,000
U. S. shipments by rail	5,095,000
Local shipments	1,969,000

Grand total 60,748,000

In addition to these the company shipped 24,607,000 laths and 2,776,000 shingles.

A record of the spruce lumber shipments by months was as follows:—

January, 2,867,000; February, 4,811,000; March, 6,191,000; April, 3,551,000; May, 526,000; June, 7,069,000; July, 151,000; August, 9,594,000; October, 2,033,000; November, 11,677,000; December, 5,214,000.

The large sawmills of this company, which are situated at Indian-town, Pleasant Point and Pokiok, near the mouth of the St. John River, will resume sawing operations. A crew of men have been engaged getting the machinery, etc., ready for the season. They have a supply of logs on hand to start operations and it is expected that in the near future the ice will run out of the St. John River and give them an opportunity to get their logs down from Fredericton and South Bay.

During the past week a large number of men came out of the woods and many passed through St. John en route to their homes in Nova Scotia and elsewhere. They reported that in some sections of the province they had considerable difficulty getting out, owing to poor sledding and the tying up of branch lines. All report that the winter had been generally successful, despite handicaps, the lumber cut being much larger than usual. The wages this season have been the highest ever paid in this province. They stated that the board at their camps was good, although at times some supplies ran short because of heavy storms and a blockade on the railways.

According to a late report, more than one hundred and sixty million feet of lumber has been cut on the Miramichi, N.B., this season, and is now ready to be brought out by the spring's driving operations. The cut on the Southwest Miramichi is said to be more than 100,000,000 feet, an increase of about seventy per cent. over last year. The biggest operators this year are the Fraser Companies, whose cut on the southwest amounts to approximately 31,000,000, while the Miramichi Lumber Company are next, with 23,000,000, and D. J. Buckley has about 15,000,000. The south and north Miramichi cut amounts to 60,000,000 feet. The Sinclair Lumber Company have about 10,000,000 coming out; the Richies, Burchills and other concerns a large amount. Early driving indications are very promising as there is plenty of snow and a good foundation. A lot will depend on the weather from now on, the extent of the freshets, etc.

Where Every Part of the Tree is Used

How French Methods of Forestry Might Well be Followed Closely on This Side of the Atlantic

The American lumberman who served with our Expeditionary Forces in France obtained a first-hand look at European conditions, where timber is scarce and is grown under very intensive methods. We saw forest after forest where every part of the tree is used down to the small twigs, which are bound up in fagots. In their logging operations, our Forestry Troops, says A. B. Greely of the United States Forest Service, had to observe many rules and restrictions which were enforced by French foresters in order to preserve young trees from injury or to make sure that a new crop of timber would be started. In some cases, they had to cut out brush and brambles to clear the ground for seeding. In a few cases they even had to climb large trees and limb them before felling, in order that they might not mash down young growth. On his introduction to French forestry methods the average American lumberjack was quite scornful of these apparently petty and often burdensome restrictions. But when he left France, the same lumberjack had usually acquired a real understanding of the importance to France of extreme care in conserving her forests, of which these logging requirements form a necessary part.

France is in a situation where the limited supply and high cost of timber have placed wood practically in the class of imported luxuries. Notwithstanding the intensive care of her forests, she is still compelled to import from 30 to 40 per cent. of the timber which she requires. The effect of the high cost of timber upon French industries and upon conveniences and comfort of her farming population is very apparent. The use of lumber on French farms is almost negligible. In fact, most French farmers are still getting on with the identical buildings and farm structures which their great-grandfathers used before them. The per capita consumption of lumber in France is not over 100 board feet yearly, or less than one-third of what the average American uses. The shortage of lumber and its high cost is one of the great industrial handicaps of the country.

This is a striking contrast to the conditions at home, where timber has been one of our most abundant natural resources and where lumber has been used with the utmost freedom in our homes, on our farms, in many forms of industry, and is an important factor in our foreign trade. The United States has never had to give the thought and intensive care to the preservation of her forests which have been an absolute necessity to France. And yet we have reached the point where we can no longer afford to go on merrily cutting down our forests with no thought for the future production of timber. It is probable that we are using up our supplies of timber two or three times as fast as timber is being grown in our forests. Many of our old forest regions have been cut out and are now experiencing a shortage of timber and high lumber prices which are not so very far behind the conditions existing in France. It is an actual fact that lumber is being shipped from Portland, Ore., to Portland, Me., and every year the portion of the price of lumber paid by the retailer or by the wood-using factory which represents the cost of its transportation from the sawmill to the point of use is increasing.

The great forestry problem of the United States is that of idle forest land. We have enough forest land to produce all the timber which we would ever require for ourselves or in our trade if we only kept it at work growing trees.

In this we are far more fortunate than France; and our failure to utilize the wonderful timber-growing resources which nature has given us will be nothing less than national folly. We have probably 500 million acres of forest land in the United States. About 350 million acres have been cut off; and out of that at least 100 million acres have been devastated by cuttings or by forest fires as to be wholly unproductive.

Even yet we do not need to resort to the intensive methods of the French foresters, which for them are an absolute necessity. Our task is a simple one. We must stop the devastation of timberland. We must put the land which has been denuded and the land which is now being cut over at work growing more trees. In many cases this requires nothing more than keeping fires out of the woods. In some cases we must leave enough trees to reseed the cutover land. In some cases it will be necessary, particularly for the State and Federal governments, to plant trees on land that has been so denuded that it cannot restock with timber of itself. But by and by the problem can be met by the simplest kind of forestry practised in cutting our remaining timber and in protecting all forest lands from fire.

The United States should not have to restrict the use of timber, to prohibit its export, or to make it a commodity so high in

Employees of Eastern Quebec lumber camp enjoying brief respite from their arduous duties

cost that we must drop to the level of France as a wood-using nation. We must meet the situation rather in the American spirit of development, of increased production and of an organized and far-sighted handling of our resources so that they will meet all future requirements. We want to continue to be a large wood-using nation. We want to continue to have an abundant supply of timber for homes and farms, for our factories, and for our foreign trade. Any other solution of the problem is unthinkable. An abundant supply of timber has been one of the principal sources of our commercial supremacy and that commercial supremacy we are not going to surrender. The remedy lies in our own hands if we will but use it. It is not to restrict the use of timber, but to grow more timber. It is to keep our hundreds of millions of acres of forest land at work, producing, rather than permit them to become devastated wastes of about as much value to the world as the desert of Sahara.

Do You Figure an Intelligent Profit?

The practice of basing profit and expense or doing business upon the selling price instead of cost is recognized to-day as the only correct method of meeting this problem, for the reason that it automatically creates a defense against disappointment and losses caused by natural depreciation, mistakes in buying, dishonest employees, bad debts, and other business leaks.

The following table shows the proper percentage to add to your cost in order to give the desired amount of gross profit on sales. For example, if your cost of doing business is 15 per cent. of your sales, and you desire to make a net profit of 10 per cent., you must make a gross profit of 25 per cent. on your sales. Referring to the table you see that in order to make 25 per cent. on the selling price you must add 33 1/3 per cent. to the cost.

Percentage on Selling	Percentage on Cost	Percentage on Selling	Percentage on Cost
20% equals	25%	35% equals	54%
21 equals	27	36 equals	56
22 equals	28	37 equals	60
23 equals	30	38 equals	61
24 equals	32	39 equals	64
25 equals	33 1/3	40 equals	66 2/3
26 equals	35	41 equals	70
27 equals	37	42 equals	73
28 equals	40	43 equals	75
29 equals	41	44 equals	80
30 equals	43	45 equals	82
31 equals	45	46 equals	85
32 equals	47	47 equals	90
33 equals	50	48 equals	92
34 equals	51	49 equals	96
		50 equals	100

The average building material business is no better than its average practices. Are your's above or below the average? Do you figure an intelligent profit or do you hinder your neighbor from making one? Always figure profit and expense of doing business on the selling price, not cost.

Thomas C. Creaghan, Newcastle; David A. Manderville, Derby and John A. Creaghan, Newcastle, have been incorporated as the Derby Lumber Co., Ltd., with a capital stock of \$49,000, to carry on a general mercantile and lumber business and to purchase, acquire and take over as a going concern the lumbering, milling and mercantile business owned and carried on by David A. Manderville, with head office at Millerton, N. B.

Railway Timber Wanted in England

The Department of Trade and Commerce, Ottawa, is in receipt of the correspondence that has been proceeding between the office of the High Commissioner for Canada in London, and the Central Committee for the Purchase of Lumber, a clearing house board that is empowered to purchase on behalf of all British railways. On February 28, 1920, the following request for tender was circularized throughout the British timber trades:

"The Central Committee for the Purchase of Railway Timber (Railway Clearing House) is prepared to consider offers for the early supply to the British railways of:

Up to 500,000 sleepers, 8 feet 6 inches by 10 inches by 5 inches.
50,000 sleepers 9 feet and or 8 feet 6 inches by 12 inches by 5 inches.
25,000 sleepers 8 feet 6 inches by 9 inches by 4½ inches.

Specifications and forms of tender may be obtained on application to the secretary, Central Committee for the Purchase of Timber, 24 Euston Square, London, N.W. 1."

The High Commissioner's office immediately applied for information, and it was elicited that the closing date for entry of tenders was March 17, 1920. The committee were notified that this early closing precluded any Canadian tendering, as at least six weeks would be necessary for the exchange of mails. The reply of the secretary of the committee for purchase extended the following concession:

"I note that at least six weeks' notice would be required to enable firms to submit tenders, but for the present purchase it is essential that quotations be received within the time stipulated. The committee will, however, be pleased to consider at any time, firm offers of sleepers and crossing timbers in accordance with the specifications and conditions now in your possession; this, I trust, will enable you to communicate with Canadian shippers on the question if you deem it necessary."

The specifications, terms of contract, forms of tender and general conditions for all purchases of this committee, are now in the Department of Trade and Commerce, under File No. 16924, and information may be obtained upon application, quoting the file. In supplement of their standing offer, the Committee for the Purchase of Railway Timber have forwarded the Department of Trade and Commerce instructional comments on points peculiar to Canadian offers. Among matters particularly raised in their memoranda are the following:

Attention is drawn to the necessity of showing upon the tender the dates by which delivery could be commenced and completed.

When submitting tender, cash discount for payment as stipulated in the general conditions should be stated.

The committee are willing to consider offers of mixed cargoes of sleepers and crossing timbers. In quotations of such nature, it is necessary to state the percentage of crossing timbers that will be included and a detailed specification of each must be included.

In the case of these mixed cargoes, a price per standard of 165 cubic feet should be quoted on the same lines as in the case of sleepers, i.e. separately, f.o.b., c.i.f., f.o.r., stating the port or ports assumed in making the f.o.r.

If Canadian shippers are in a position to offer cargoes or parcels separate from, or additional to, the mixed cargoes to, the committee will be pleased to receive such quotations. A form of tender for such quotations is prepared, together with specification form to show the percentage of the several lengths required under each dimensions. (These percentages must be based on the cubical contents and not on the number of pieces.)

The crossing timbers must be exactly to the specifications laid down for the sleepers, 8 feet 6 inches by 10 inches by 5 inches, as regards quality in both hard and soft woods, and the general conditions of the tender will be identical, but the specifications as to dimensions, allowance of wane, etc., should be incorporated in the tender.

Says Western Demand Exceeds Supply

"Fred W. Reynolds, treasurer of the West Coast Towing and Salvage Company, and manager of the Reynolds Company, Limited, large manufacturers and wholesalers of Douglas fir lumber and red cedar shingles, is in the city from Vancouver, B. C., for a few days, while on his yearly visit to his principals, eastern capitalists living in Toronto," says the St. Thomas (Ont.) Times-Journal in a recent issue. "His trip was two months ahead of time this year on account of the illness of his father, F. P. Reynolds."

"In discussing British Columbia matters and more especially as they appertain to the city of Vancouver, he stated that conditions at the present time were probably on a more sound commercial and business basis than they ever had been before. People, having realiz-

ed the folly of real estate and timber investment, have got down to practical business."

The demand for lumber today far exceeds the tremendous output of the British Columbia mills and their stocks of the present time run as low as probably fifty million less than normal on the coast. Douglas fir logs are sold \$20 for No. 3, \$25 for No. 2, and \$30 for No. 1, delivered to the mills at Vancouver. When one adds the tremendous increased manufacturing cost to the raw material, not forgetting the huge freight rate that exists between the coast and Ontario, one can readily understand the high prices that are asked for lumber. While British Columbia lumbermen have enjoyed a tremendous market during the past year and a greatly increased market in Ontario, still this is to be expected from the general conditions of the country. Douglas fir lumber to-day is going into districts that did not know the product before.

"The American market has also taken a great deal of lumber from the British Columbia mills in the past year and a half, though not nearly as much as the general public think, probably twenty-five per cent. would be the general maximum."

Much Lumber on the Cosford Branch

R. Hayes, a woodsman, who is familiar with the forest areas of the Cosford district on a line of the Lake St. John Railway, that has been closed for the past four years, on account of the bridge over the Jacques Cartier River being condemned, recently wrote to Mr. Edmund Conway of Quebec City, giving an estimate of the various kinds of lumber that would be made available for shipment on the Cosford branch, by an extension of ten miles. The letter was brought to the attention of the Council of the Quebec Board of Trade with the result that the council adopted a resolution which was forwarded to Mr. D. B. Hanna, president of the Canadian National Railways.

The letter from Mr. Hayes to Mr. Conway was as follows: In answer to your letter asking me for an estimate of the different kinds of lumber that would be available for shipment on the Cosford branch with an extension of ten miles of new lines, I submit the following:

Hardwood Sawn	180,000,000 ft. B.M.
Firewood not fit to saw	150,000 cords
Pulpwood	175,000 cords
Slabs and Edgings from sawn	60,000 cords

After this is exhausted there is one hundred miles of a virgin forest to extend into. The limit holders here are Harold Kennedy, J. A. Rousseau and F. W. Ross, Quebec.

The resolution of the Quebec Board of Trade was:

Whereas the Cosford Branch of Railway running from Valcartier Station to Riviere aux Pins, a distance of 5¼ miles, has been closed for about four years on account of the bridge over the Jacques Cartier River being condemned.

Whereas the people are obliged since that time to haul freight over this branch line with a horse and lorry, this preventing the farmers and others from lumbering, as it costs too much for their freight;

Whereas this section of the country is rich in hardwoods, such as maple and birch, and also pulpwood, and that there is a great demand for this kind of lumber;

Whereas one saw-mill has already been erected this winter; that two miles from the end of the branch, there are two mills sawing lumber for the Quebec market, and that if the road was opened, many other mills would certainly be put into operation;

Therefore it is the opinion of the Quebec Board of Trade that the branch line of railway from Valcartier toward Cosford, should be put into operation again, so that in particular the city of Quebec may profit by the supply of firewood which abounds in the country through which that branch runs, and that the secretary of the board be requested to write Mr. D. B. Hanna, president of the Canadian National Railways, explaining the necessity and importance of making this connection with the main line, north of the Jacques Cartier River, near Valcartier Station, as soon as possible, and to send him a copy of this resolution.

Straight Talk on Buying Babbitts

The British Smelting & Refining Company, Limited, Montreal, are issuing a special and striking folder with the title of "Blind Buyers—a Straightforward Talk on Buying Babbitts." The folder emphasizes the importance of buyers being wide awake to the grade of babbitt they purchase—they should purchase a babbitt alloyed from prime virgin metals, which although slightly higher in price, will save the additional cost many times over on the increased production of the machinery.

The Common Sense Idea in Building

During the past ten years or so, there has been a violent revolution against the old method of building homes in "rows." It used to be that owners had twenty or thirty houses, all alike, built on a block, and rented them without much difficulty, because the similarity was taken as a natural and to be expected thing. Then came the idea of individuality in homes, whether owned by the occupant or rented, and for a long time it has been insisted that each home have individuality of its own, says the "Southern Lumberman."

The new element of tremendously high labor costs for building work is making some people think about the advantages of the other system, however. In Chicago and many other large cities, carpenters and other skilled workers on buildings get \$1.25 an hour for an eight-hour day, and time and a half overtime. In many instances double time is paid for work on Saturday afternoons and holidays. This means that a carpenter who puts in say sixty hours a week, would earn in the neighborhood of \$85. Paying labor at this rate runs up the cost of building to a figure that would have been considered prohibitive not so very long ago.

It certainly emphasizes the imminent desirability of having as little hand work as necessary in a building, or rather, doing no unnecessary hand work. If, however, each small residence that is not up is individual in its design, and requires individual treatment, a great deal of hand work is almost inevitable. It is possible to cut much of the material to size at the planing mill, and to anticipate the carpenter at many points, but the fact that but one building job is involved makes it impracticable to substitute the machine for the hand laborer in every instance.

What Cash Means to the Yardman

These are the days when cash counts in view of the increased capital investment in stocking the average retail lumber yard owing to the high prices. It is advisable to explain to all customers the advantage of paying cash. The table following shows what you are paying your customers in rate of interest for their cash, using as a basis:

Terms 60 Days Net					
2% discount equivalent to	12% interest for 2 months				
3%	"	"	18%	"	"
4%	"	"	24%	"	"
5%	"	"	30%	"	"
6%	"	"	36%	"	"
7%	"	"	42%	"	"
8%	"	"	48%	"	"
9%	"	"	54%	"	"
10%	"	"	60%	"	"

For example—bill of material figured—\$100.00—60 day-net cash or 2 per cent. discount at time of purchase.

2 per cent. discount on \$100.00 equals \$2.00.

\$2.00 discount on \$100.00 for 60 days is \$1.00 per month or \$12.00 for one year.

\$12.00 is one year's interest on \$100.00 at 12 per cent.

Hence, the 2 per cent. cash discount you give is equal to 12 per cent. a year interest on your customer's purchase money.

Getting Better Service Out of the Trucks

Once a week we have a meeting of our employees, and there we discuss our business matters in general, including means of serving our customers better. Something is always brought out to encourage us in giving better service, says C. W. Vaughn.

You know there are times in any business when apparently everything "gets on the drag," so to speak—that is, nothing moves just right, or there is not enough harmony among the employees. At any rate, everything is "all wrong" and you can't tell just what is the matter.

This sometimes happens with us, and then is when I feel most the need of those meetings. It is very noticeable that renewed enthusiasm, interest and co-operation follow these discussions, where you can give the yard man, the bookkeeper and the truck driver a chance to feel that they are really a part of your business.

For instance, at one of the meetings I said, "Boys, we are not getting the trucks started early enough. What's the matter?"

One driver explained they had to wait for the stove to get hot enough to heat some water, taking thirty minutes from the time the fire was built. Then one of the boys volunteered to bring a kettle of hot water each morning and thereby save twenty to thirty idle minutes for the trucks.

The question came up of getting more business. One of the boys suggested that each man keep a little note book and jot down the names of persons known to be prospective customers for lumber in large and small amounts. This was done, and the names handed in once a week. Already I have quite a list of these names, and

we are writing them or calling on them personally. We are sure we can develop a lot of business in this way.

Another thing I discovered was that we were losing too much time waiting for a charge ticket to be made out after loading, with the truck standing idle. Now the ticket is made out and is ready when the last piece of lumber is loaded on the truck.

Balsam Must Be Used for Pulp

There is a considerable prejudice against the use of balsam in the manufacture of news print, caused largely by insufficient knowledge of the species, says C. R. Mills, in "Conservation." Some companies claim that balsam cannot be driven for any great distance because of the loss from sinking when the logs are in the water for any length of time, while other companies are actually driving balsam for quite a considerable distance. There are companies which have been allowing only ten per cent. balsams in the annual cut of logs, regardless of the fact that the species forms upwards of fifty per cent. of their total stand. The greatest trouble in the use of balsam seems to be the presence of pitch pockets caused by the efforts of the tree to heal wounds while growing. When the wood is reduced to pulp, the pitch gets into the pulp and may cause trouble on the screens and paper machine. In spite of this, however, balsam can be used, as demonstrated by many companies, some of whom are using it indiscriminately in mixture with spruce, with quite satisfactory results. With the available supply of spruce decreasing as to cause more or less alarm, and with balsam forming such a large percentage of the forests of Eastern Canada, particularly so in the young growth, the various governments and companies should and must see to it that this species is fully utilized if Canada is to maintain its position as one of the leading pulp-producing countries of the world.

Wood Preservation as a National Need

By Kurt C. Barth, Chicago

Wood Preservation translated into popular phraesology simply means creosoting, and as far as the retail lumber dealer is concerned, the handling of a properly refined coal-tar creosote oil, selling it with such lumber as will be exposed to conditions favorable to decay, and promoting its extensive and correct usage.

It is profitable because there is a great element of gain, direct in the form of the profit made on the sale, and indirect in the form of the many lasting advantages secured to the industry.

The chief, and more important advantage to the dealer is that lumber is made more resistant to decay, a most imperative need in face of the increasing scarcity of durable woods and higher grades of lumber.

Competitive products are promoted chiefly by claims for greater permanence—by the "anti-rotting" selling argument. Hence increasing the life of wood to compare favorably with that of these "permanent" materials on a practical economic basis is not only desirable, but in fact necessary to the profitable survival of lumber distribution.

Service is the one commodity that is strictly individual. Its character and, therefore, its marketable value, is entirely controlled by its creator and sponsor.

Service alone controls the ultimate value of the product sold. The best lumber, sold at the cheapest price will fail to give permanent, business producing satisfaction unless the human element of service has enhanced its value.

Wood Preservation—the selling of a few gallons of creosote, accompanied by painstaking directions for its proper application, and an interesting reference to its value and the saving which will result—is a service to the particular customer which will save him the expense of premature replacement, and this saving increases his purchasing power, which, with the confidence established in the dealer who was the cause, will bring the extra dollars back into the dealer's till with interest.

Wood preservation permits the farmer to employ wood where he knows that to be the best, without paying a premium for replacements due to decay.

Creosoting permits the farmer to turn what is now fuel wood into posts—to utilize so-called waste timber for fencing—to save again, and the dealer more than makes up for the loss on the posts he might sell, by the ¼ or 1/3 of a gallon of refined creosote he will sell for each of such posts.

The farmers of the United States lose approximately \$250,000,000 annually, in material alone, due to decay.

Adding to this a reasonable amount for labor which must be purchased to make replacements, the total loss in dollars and cents will borrow over \$6,000,000,000 of new capital for improvements.

Hence, premature and preventable decay results in an enormous loss of new business to lumber dealers, and the communities in general.

Review of Current Trade Conditions

Ontario and the East

Every preparation is being made for the resumption of activity in the various lumber mills, and by the time this edition of the "Canada Lumberman" reaches its readers, nearly all plants will be in operation. Quite a few have started up already, some early in April. If no acute labor troubles present themselves, the coming season should be a good one from a productive standpoint as the output of logs in most sections of the country is considerably ahead of last year. Several cuts have been sold and a large one in hemlock recently brought a good figure—an increase of 50 per cent. approximately over that received last year for the same stock.

Lath are also a little weaker and owing to considerable winter cut stock being available, have dropped a couple of dollars in price. This does not mean that present values have been upset and they are likely to hold until later in the season; at any rate until more is known about the building prospects and the definite quantities of white pine and spruce lath available. Shingles are also a little easier owing to so many cars being in transit. There is quite a difference in the price asked by a number of the firms. Some retailers are buying quite heavily in the belief that there will be a scarcity and others do not know exactly what to do. A good deal of B. C. stuff is now coming through in the way of rough clears, ceiling and flooring and some timbers and finish are also moving. Prices on the whole are firm in spite of some "cuts" which have taken place on certain lines. Mill representatives deny that there is any general reduction and assert there has only been a levelling up in prices, making things more equitable all around.

There has been a great reduction in stock during the last part of 1919 and the first three months of 1920. At the quarter just ended March 31st, the association received reports from 53 mills and the following figures were compiled as regards stock on hand:

The upper grades, such as finish, siding, ceiling, casing and base were reduced	2,400,000
No. 1 Dimension was reduced	2,400,000
No. 1 shiplap was reduced	2,200,000
No. 2 shiplap was reduced	1,000,000
No. 1 common boards was reduced	500,000
No. 2 common board was reduced	400,000

Dimension shiplap and boards in all grades were reduced practically 6,000,000 feet. The total stock reduction on all items amounted to practically 20,000,000 feet.

The housing commission in Ontario are also making heavy calls on Western stock, and one Toronto firm recently closed an order for supplying all the lumber and interior trim required for some 50 houses in Kitchener and 30 in Galt. B. C. fir and spruce will be used.

There are strong requisitions for all kinds of hardwood and furniture factories, automobile concerns, gramophone producers and agricultural implement makers are clamoring for various lines of stock which is picked up as rapidly as possible. The country is being scoured for sources of supply. One eastern firm has been endeavoring to obtain 1,000,000 ft. of 1 in. basswood, 4, 5 and 6 in. in width, but without having its demands satisfied.

It is understood that there is a growing demand just now for birch for flooring and that sales have been made during the last few days at \$125. per M for mill run stock in carload lots. This is only about one-third the price of quarter-cut oak and represents a Canadian wood which may be used very largely for flooring in the future. The development will be watched with much interest.

There is as already stated a great scarcity of hardwoods of all kinds and winter stocks were taken green from the saw in many instances so urgent was the demand. Prices are being well maintained and in not a few instances show a further tendency to aviate.

The building situation continues active and permits in the majority of towns show a gratifying gain both in numbers and values over the corresponding period of last year.

During the past few days a great difficulty has been experienced in securing cars for shipment owing to the tie-up at all frontier points. Many wholesalers have large stocks sold which are as yet undelivered. It is expected from this out there will be considerable improvement.

The trade outlook on the whole is regarded as very satisfactory and there is a big search for stocks, particularly in hardwoods. A

number of deals have been pending but have not yet been concluded owing to the difference in price asked by the mill owners and that which the wholesaler wants to pay.

Great Britain

Quiet conditions have ruled in this market during the past week. The volume of selling in evidence being of a somewhat restricted nature. The undertone, however, is good, and values all round are maintained on a very firm basis.

The Quebec shippers have made further progress in fixing contracts for summer shipment, and are understood to be now sold out in yellow pine deals and sidings, says a Glasgow correspondent. Few orders have been placed for spruce, contracting being limited to the broader sizes, buyers relying on obtaining their general requirements from the stocks being handled by the Associated Importers' Syndicate, and this they should be able to do at cheaper prices than could be arranged on contract. There has not been much done in log timber, shippers having had limited supplies to offer, but a few contracts have been fixed for elm, oak, Wancey pine and birch. There is little elm on the market at present, and prices are ruling very high, sales being reported lately at round about 20s. per ft. cube for wood of 45 to 50 cubic ft. average.

In regard to American hardwoods the market shows no signs of improvement, values still continue high, although the rate of exchange has become considerably easier. The demand for all kinds of hardwood is still strong, consequently there will be no easing up in prices until stocks begin to accumulate. Shipments arriving from U. S. A. are now coming forward on a larger scale than has been the case for some months past, but it will take some time yet before the market has recovered from the serious shock which it sustained during the recent heavy decline of the £ sterling in America. However, everything points to an easing up in values during the next month or two, so that during the summer there ought to be a greater and more extensive volume of business in timber.

The supplies of mahogany in first hands with which to keep the public sales moving from month to month are fast approaching exhaustion, Honduras wood being practically the only description that is left. It is fortunate, however, that further moderate shipments may be looked for, as another consignment of Belize wood is expected, and some of this shipment should be about ready for inclusion in the catalogues when the present stocks have been offered and absorbed by the market. We understand, too, that a further shipment of Grand Bassam wood may be shortly looked for, and this will be welcome, as not a single log of African now remains in brokers' hands.

The market all round continues very firm in tone, and, notwithstanding a certain restriction in the demand, stocks are being firmly and strongly held, there being not the slightest pressure to sell with the outlook promising no reduction in the cost of importation.

Many descriptions of lumber stock are now greatly reduced in amount, some of the supplies in regard to the better grade descriptions being exceedingly scarce. For these reduced supplies advanced values are quoted, such rates, however, being still under the cost of the replacement of the goods by fresh shipments under the present conditions.

United States

There is considerable uncertainty regarding general conditions at the present juncture. One is the labor situation, the other the number of building permits being cancelled and last, but not least, whether "the peak" has been reached in prices. Just at the present time there is a disposition on the part of most buyers to mark time, and, while it may be a between-seasons-period, still the present and future price element is crowding itself to the forefront. Conservatism appears to be the ruling factor at present and purchasing is only carried on for immediate wants and specific requirements. Prices for lumber have steadied, but have not declined materially, and with the uncertainties of the future as to supply it is difficult to see where any considerable concession from present price levels can come about. It is true that the current demand is somewhat light for this time of the year, but stocks supplies at the mills are also light, and production is not increasing to such an extent as to overtake prospective demand and take care of old orders.

While it is undoubtedly true that building throughout the country has not developed as rapidly as had been expected, owing largely to the hope of prospective builders that the prevailing high

prices of labor and of materials would decline, on the whole there is a very large amount of building in progress. Reports from deal-under construction are much fewer than would be the case under more favorable conditions a constant demand for lumber that is keeping their sales well up to and even above normal, this demand resulting to a large extent from repairs and alterations that are being made in lieu of new buildings. While the building situation is far from satisfactory in many of the larger cities it is in the undeveloped sections of the country that reports of activity in the building line are coming more than from any other points. This is markedly true of the oil producing sections.

Conditions in the hardwood lumber market have not changed much in recent weeks. There is somewhat less activity on the part of buyers, but the scarcity of dry stock prevents any material decrease in prices. Some of the highest-priced woods have gone back to some extent from the peak, but there is so much variation in quotations that it is difficult to gauge the decline. Reduced production by southern hardwood mills is another sustaining influence in the market. Just as the mills got to going well heavy rains came on, forcing many of them to shut down, and full capacity production will not again be reached for some weeks.

The northern hardwood mills are producing much lumber, but the manufacturers do not know how long they will be able to keep it up. The threatening factor is the uncertainty of what labor will do. Northern Michigan and Wisconsin mills are faced with a growth of the organization of the Timberworkers in their mill and camp crews, with the prospect that strikes may start at any time. If these fears are realized, production will be greatly curtailed while the issue is being fought out.

Trade in southern pine shows distinct signs of revival after the recent week of dullness. Although this dullness did not cause any slump in the market, there has been some leveling down of prices, and this apparently has encouraged many buyers who were hesitating, to reenter the market. Now that stocks as a general rule are more adequate than has been true for a long time it is only natural that some price adjustments would ensue, and the declines noted have been confirmed chiefly to those grades and items which were priced according to supply, and consequently often far above their relative values. Much of the lumber now moving is thick stock, evidently for industrial construction, of which there is a large volume throughout the country; but the slowness of house building to develop keeps the market from being what could be termed active.

ON CONDITIONS AT
HOME AND ABROAD**

Stiff Increases in Prices Prevail at Ottawa

Sharp advance in practically all grades, which established record prices, together with a strong foreign demand and a very serious shipping situation, where the chief happenings in the Ottawa lumber market during the closing period of April. Domestic trading fell off somewhat, and the assumption was that the retail yards had been pretty well stocked up by the wholesalers and that further local buying would not be undertaken in a general way until the quotations for next season's saw cut became known.

Taken all around the market remained absolutely firm as to price and demand, but the big concern of sellers from the manufacturing end was that of shipping facilities. Ottawa lumber shippers during the last two, if not three, weeks of April were confronted with the greatest shipping problems, to United States points, that they ever had to consider.

The situation was largely brought about by the placing of numerous embargoes by American railroads, owing to labor strikes and disturbances, and great congestion at terminals in the eastern and north eastern states. The embargoes applied to New York city and district, practically all the important receiving points in New York State, Detroit, Buffalo, Black Rock, and other places. As a result of the embargoes a well-known Ottawa lumber company doing an extensive business in the United States, had over two million feet of lumber on order held up.

The total amount of stock on order that was, up to April 23rd, being held up at Ottawa and in the Ottawa Valley was very hard to estimate. Lumber shippers confined themselves to the statement that it run well up into the millions of feet. Every company and shipper was figuratively thrown into the same boat by the placing of the embargoes, which to make matters worse followed suddenly on top of the great foreign car shortage, which occurred in February and March and which was largely due to abnormal weather conditions in the north-eastern States, and great congestion at eastern American terminals. The lumbermen simply could not help themselves in the matter of getting shipments away. The number of foreign cars available became greater, but the operation of the embargoes to various points, made it little short of bewildering to route cars of shipments with any hope or certainty of their arriving at their intended destination within a given time.

"It is true the foreign cars are getting better and more plentiful, but that does not help any when you get notice from the American roads one day after another that an embargo has been placed on a certain point overnight. What can we do about it? Nothing, but sit back and put up with it and trust that sometime soon that the embargoes will be lifted and the American roads will find themselves in a position to handle and deliver our shipments," was the summary of one of the best known lumbermen in Ottawa, on the existing situation.

Outside of the lumbermen's worries about the embargoes the feature of the market was the general and sensational raise in prices, when for the first time in the history of the Ottawa lumber market hit the record altitude of \$200 per thousand feet for 2 x 7 good pine sidings. This price, it was pointed out, was hardly an actual price, as

the stock could not be had, or was not in the market in any great quantity. "Of course two hundred dollars per thousand is a record price for lumber in Ottawa, but the stock is not here. Advancing the price of the better grades is simply in accordance with the advance in the price of the lower grades stocks for which there is a very strong demand. Anyone can easily see that if the price of the lower and middle grades advance, that the value of the better grades must go up proportionally" was the explanation for the raise in price as given by one of the leading manufacturers. Not only lumber but lath and shingles figured in the increase which resulted in the No. 1 and No. 2 grades of white pine lath practically going off the market and being listed at "open" quotations.

The majority of the increases occurred during the middle and the latter part of April.

Labor conditions with the factory and woodworking plants also command considerable attention, as the workers recently presented demands to the employers calling for an increase of from twenty to twenty-five per cent. increase per hour. This matter is still undecided and the Department of Labor has been asked to grant a board of arbitration. Inquiry at the Labor Department by the "Canada Lumberman" brought the information that under the Industrial Disputes Act that the woodworkers did not class in the category of the necessary trades covered by the act or were not a public utility. Thus the Department of Labor could only grant a board of arbitration, after first having received the consent of the employing interests. In short if the employers refused to agree to a board the Labor Department could not grant one, but if they lent their consent it could. In the event of the differences not going before a board of arbitration it was expected that the increases in wages sought and the improvement of working conditions asked for would be settled individually by each of the plants with their own employees. Though no official demand had been presented to the owners and operators of sawmills it was conceded by the operators that an advance in wages would have to be made to the employees this year. The amount of the prospective increase was not estimated.

Rivermen for the spring drive were reported to be fairly plentiful as to numbers, but the standard of their quality, like last year, was indefinite. Reports from the various lumber companies indicated that

preparations for the drive were well under way and that the spring season had been satisfactory.

Some Uncertainty Regarding Conditions in Montreal

The Montreal lumber position is uncertain. Some wholesalers are frankly nervous as to whether prices will be maintained and are adopting a conservative attitude in the matter of buying in any large quantities. At present quotations would mean heavy losses, and the wholesalers referred to have not confidence that with the new cut coming on the market, quotations will be maintained. On the other hand, there are those who argue that every indication points to the market remaining strong. Building is certain to be more brisk than last year, the cost of manufacturing lumber is high, and the cut, although larger than last season, will not be sufficient to upset prices, in view of the demand which is certain to come from all quarters. One man's opinion is as good as another's, and there are so many unforeseen circumstances that it is difficult to gauge the course of the market.

On the whole, business is moderate. Local yards are not heavily stocked, but here again retailers are guided by the uncertain outlook. Building has certainly opened in promising fashion. The city of Montreal will apply for \$3,000,000 for workingmen's houses, but as the Provincial Government has allotted just over a million dollars to suburban councils, the city will not get more than \$2,000,000. There has been further delay in getting down to business, and it will be at least another month before anything worth while is done.

There are a number of good orders for American account, but the railway strike and car shortage have held up shipments, although the car situation is a little better.

Hardwoods are as firm as ever. Birch is in good demand for the States, with, however, a short supply of lumber.

A lumberman who has visited several parts of the province reports that there is likely to be a good supply of lath. Almost every mill, he states, who could procure machinery, is manufacturing lath, and he predicts a substantial drop in prices.

The B. C. section is in a more or less confused condition. The impossibility of shipping lumber across the border has resulted in the mills trying to find a market in the East. The result has been a large increase in cars in transit. While there is a fair demand, it is not nearly sufficient to take care of the heavy shipments, with the result that prices have declined.

Preparations are now being made for the export season. So far the indications are that freights will continue to be high. McLean, Kennedy & Company, Montreal, have been appointed charters for the vessels and space for the balance of the lumber to be shipped to the United Kingdom on account of the British Government, and which has now been purchased by the Associated Importers, Limited, of England. The shipments will still be arranged for by the Eastern Canada office of the Imported Timber Disposal Section of the Board of Trade, England.

Pulpwood continues high in price. The groundwood market is exceptionally strong, prices are now at a record level, and sulphite is picking up.

Heavy Shipments Made from St. John by Water

The last month has seen practically no change in the foreign or local situation at St. John. Very large shipments both by water and rail have taken place, but mostly by water. The Government contracts, which were in effect during the war, are now largely all shipped up, as far as St. John is concerned, and very little remains unshipped. French Government owned stocks, which were stored at St. John, it is understood, have been sold to Ontario firms and will, no doubt, be cleared away before long.

The car situation has not been good at St. John, but it is better than many other sections, as a considerable number of foreign cars come to St. John loaded with stock for the winter port steamers. This gives a limited supply, but as many firms are shipping from here when cars are divided up, only a few get to each shipper. Embargoes on American roads have about been all lifted and this is also a great help in the movement of lumber.

The mills at St. John have started their season's sawing. They will saw about 50 per cent. of their logs into American size, the balance going to the British market. Practically all the narrows will go over into the United States. Prices for logs are very high; for early logs about \$25.00 per M. being paid, but later on logs will be more plentiful and prices will, no doubt, be less. The yards of the mills are well cleared off and any stocks sawn should find ready market at good prices.

The price of lumber remains firm. The increased cost of logs and the advance in wages asked by the employees, will make a

costly article when manufactured. The mill workers are asking from 50 per cent. to 75 per cent. over last year's wages.

Locally business for the factories is not good. Very little repair work or building has yet started and the outlook at the moment is not encouraging. Stocks at the factories are ample for needs for some time ahead.

British Columbia fir has risen so in price that more eastern spruce and pine is being used for trim and finish of all kinds. Laths remain firm and there are practically no stocks at St. John. Shingles in the high grades are also all cleared up and only a few low grades remain in the sheds.

The drives have started as the streams have broken up and good progress should be made in the operation.

Mill Workers Get Substantial Advance

Later information says that the control of the lumber trade at St. John is at the present largely in the hands of the labor party. There is no strike and the mills have just begun the season's sawing, and have been trying to arrange the season's wages ahead. The operators asked 40 per cent. increase in wages, or \$1.40 per day over last year. This, added to the two previous years' advances, would make an increase of \$2.20 per day in three years. At a final conference between the sawmill owners of the Lower St. John River and the employees, it was agreed that an advance of 28 per cent. in wages would go into effect. About 500 men are affected.

Some cuts have been sold for the season at prices ranging about \$4.00 to \$5.00 per M over last year. This is about on a par with last year's prices which were about \$37.00 per M, but increased costs will eat up the advance.

The St. John river has opened and logs are now running freely. No great amount of damage was done by the ice as it did not run out suddenly. Prices of logs are higher than a year ago, possibly \$2.50 to \$5.00 per M. Many bank logs have been cut this winter, largely on account of increased values on sawn lumber and the budworm. As much fir was cut rather than have it go to waste, probably the cut on the St. John river, including bank logs, will be in the vicinity of 80,000,000 feet.

Local lumber trade is not what can be called good as the people who are talking of building are afraid to go ahead on account of high costs in everything. It is possible that as the season goes along, the parties will find they cannot expect very much change and will accustom themselves to conditions and start operations. This was largely the condition at St. John in the early spring of 1919. Prices locally remain firm and hardwoods are steadily advancing, flooring being very scarce. British Columbia products are also very firm. This is causing an increase in the sales of Eastern spruce and pine trim, which will continue for a long time as the price of B. C. fir has gone abnormally high compared with eastern products.

The factories still have good business but it is largely old business in unfinished orders.

Refuse lumber and all low grades is quite scarce and high as American buyers have come into the market and purchased all stocks they could find.

The car situation has not improved as foreign cars are still very scarce and about every week an embargo shuts off shipments.

Lath are very scarce and will remain so until the mills start for the season. Price \$16.00.

Shingles are also very scarce. Extras \$8.50, clears \$7.75, 2nd clears \$6.50, ex. \$15.00. All at St. John, net cash.

The box trade is very good and prices remain very firm

Earnings of St. Maurice Paper Co.

According to the annual report of the St. Maurice Paper Company, Limited, the Canadian subsidiary of the Union Bag and Paper Company, the operating profits after deduction of all expenses of manufacturing, administration and sellings, amounted to \$1,329,622, as against \$1,168,489 in 1918 and \$1,060,853 in 1917. With other income, the total income amounted to \$1,418,805. After the usual deductions for depreciation, at \$426,029, up from \$332,185 in 1918 and other charges unchanged from the previous year, a balance of \$855,342 remained, out of which interest charges were paid, leaving earnings for the year at \$716,924 as compared with \$562,300 in 1918, and \$595,148 in 1917. After paying increased dividends at \$187,500 and taking care of a balance of discount on securities written off of \$153,000, the surplus remaining was \$376,424, against \$499,800 in 1918 and \$595,148 in 1917. With the balance from the previous year, the profit and loss balance amounted to \$1,799,138, against \$1,401,715 in 1918, and \$901,915 in 1917.

The B. C. Fir & Cedar Company are building a \$70,000 mill on False Creek, Vancouver.

Supply and Demand Will Rule to the End

From the time the human race began bartering for the necessities of life or the commodities produced by labor the law of supply and demand has regulated the exchange of price values of the goods bartered for and in. As time progressed and civilization improved and spread there came to be established monetary systems of and between nations and the law of supply and demand continued to rule in the values of all goods dealt in. Such has been the rule ever since civilization existed and such will it be until the end of eternity, says the "Southern Lumberman."

There can be no cause without effect and no effect without a condition. The cause of high prices is that relative difference between small production and large demand. Exorbitant prices of today were founded upon a theory of government put into effect during the war that the more money a man earned the more bonds he would be able to buy to run the war with. Then came a theory of excess profits tax that was devised for the purpose of assisting the government in the maintaining of price levels through governmental fixations of prices. As a theory it was beautiful; as an actual adjunct in the business of conducting the war it was a failure—an awful one. From the end of the war to the present is but a short space and the extravagances the new theory of taxation fostered in the minds of wage earners and all other classes of citizens were multiplied when all governmental restrictions as to price values were removed. The exorbitant feature connected with all prices would be summarily removed could the average man but understand that the excess war profits tax is the underlying basis and join in a demand on congress for its immediate repeal.

In the course of time there will come a condition in which all affairs of life, industry and commerce will be normal—but it will be a new normal and not that old one we knew of in the days before the war. It will be a much higher normal than that of the past, as it will have to take care of the increased costs of production necessitated through increased wages and other essentials of industry. As the law of supply and demand rules prices in these abnormal times so will it rule the prices of the normal times and times to come.

When the demand for lumber is below the production of the sawmills then the manufacturers of that lumber have virtually to sell at a price the buyer is willing to pay. Today the production is far short of the actual needs of the buyers and the latter naturally pay the price the manufacturer feels his lumber is worth.

Between the law of supply and demand there should be no friction between the producing and consuming interests. As a general proposition the consuming interests have all the best of it and take full advantage. Now that the manufacturer has a chance to make some money it is his right to take advantage as he sees fit to do so.

Practical Pointers on Barn Construction

"Helpful Pointers," a well-known house organ of a retail lumber concern, says:

"Every man who builds a barn wants a satisfactory barn, and if the barn is cold during the winter it is not a satisfactory barn. The following points will help you in making the plans for a new barn or for remodelling the old one.

"Barns made of lumber are more practical, economical and artistic.

"Barns should always be built with the length of the barn running north and south to get sunlight throughout the stock room.

"Calves and all small stock should be in the south end of the barn as the south end is always the warmest part of the barn.

"Horses and cows should be separated by a tight partition.

"Plan six hundred cubic feet for a cow, seven hundred and thirty cubic feet for a horse. Figure six calves the same as one cow and two yearlings the same as one cow.

"There should be four square feet of glass area per animal and the windows should be placed as near the ceiling as possible. One piece sash with tight fitting storm windows for winter.

"The most satisfactory plan of a ventilating system can be made where the stock face the centre of the building.

"Driveways should be eliminated and litter carriers used instead.

"All doors should be equipped with storm doors and rolling doors should not be used except where absolutely necessary.

"If joists overhead are ceiled, insulation at least one-half inch thick should be used under the ceiling to prevent condensation when the hay is removed from the hay mow floor.

"The information in this and succeeding articles is based upon tests and experiments that have been made in hundreds of barns from the Atlantic to the Pacific Coast.

FIRE BRICK

We make several brands of fire brick made by every known process of manufacture from a selection of various high grade Pennsylvania clays. This enables us to furnish the best adapted fire brick for your boilers, dutch ovens, refuse burners, kilns, etc.

We specialize in fire brick for power plants and if you will advise us whether your boilers are hand fired or stoker fired and kind of fuel used we can then give you the proper brick for your work.

We carry a large stock of our different brands in various sizes and shapes in our Hamilton warehouse, which enables us to ship at once.

We manufacture the following well-known brands:

**"Elkco Special," "Elk Steel,"
"St. Marys," "Keystone" and "Rotex"**

Pyrene Fire Extinguishers

Are the Ideal Fire Protectors for your mill, for the following reasons:—

- 1st—Pyrene is death to all inflammable fires.
- 2nd—Pyrene does not freeze at fifty degrees below zero.
- 3rd—Pyrene does not deteriorate.
- 4th—Pyrene is easily operated and ever ready.
- 5th—Pyrene reduces your Fire Insurance rate 15 per cent when installed on your Automobile or Motor Truck.
- 6th—Pyrene has served with the boys at the front.
- 7th—Pyrene in one of our Holsters is ideal for your watchman in case he locates a fire in your building.

We also carry the 2½ Gal. Soda Acid Extinguisher

Ask for our Catalogue which contains a full line of fire appliances, also for our book on how to protect your factory. This book contains valuable information.

EDGINGS**Ontario**

Norman Hipel has started sawing logs and has opened a wholesale lumber yard in Galt, near the Grand Trunk railway.

The La Salle Lumber Co., Limited, Toronto, have been authorized by supplementary letters patent to change its name to the Whitefish River Lumber Co., Limited.

The Fesserton Timber Co., of Toronto, who operate a sawmill at Monticello, Ont., have begun sawing for the season and expect to cut about three and a half million feet of spruce.

The capital stock of the Canadian Mathews Gravity Carrier Co., Limited, Port Hope, has been increased from \$100,000 to \$300,000 and the name changed to the Mathews Gravity Carrier Co., Limited.

Graves, Bigwood, & Co., of Toronto, began sawing at their mill at Byng Inlet about the middle of April, the ice having gone out of the river a little earlier than usual. The company expect to have a very busy season.

The Harris Wood Products Co., Limited, Toronto, have moved their offices from Bay St. to 109 Church St. They are exhibiting at the new offices a small building built according to the specifications of the Harris system of sectional construction.

Wm. Stirrett, of the Stirrett Lumber So., was in Chicago recently, conferring with financial associates regarding the further extension of the Port Arthur Waggon Works building for the woodworking plant which the company intend to install.

The Eagle Lake Lumber Co., who have two mills at King Lake and Eagle Lake, near South River, Ont., started sawing early in April at King Lake and will cut over a million feet at this point. About half the cut will be birch and the rest spruce, hemlock and the white pine.

Messrs. Stevens & Groff, who recently purchased the planing mill and sash and door factory of James A. Hewitt, of Beamsville, Ont., are now conducting that industry under the name of the Beamsville Planing Mill. The firm is very busy at the present time and reports the outlook most promising for the coming season.

The Victoria Harbor Lumber Co., of Victoria Harbor, started sawing early in April. They have a good stock of logs on hand and the prospects for the coming season are regarded as promising. The Georgian Bay Lumber Co. at Waubesa, Ont. also put their plant in operation a few days ago and expect to have a good season.

J. A. Mathieu, Limited, with a capital stock of \$1,000,000, and headquarters at Fort Frances, Ont., has been incorporated to carry on the business of lumbermen and paper dealers in all branches, and to manufacture, buy, sell and deal in timber, lumber, wood pulp, paper, etc. Among the incorporators are James A. Mathieu, M.P.P. of Rainy River, and others.

The Little Giant Manufacturing Co., Limited, North Bay, were recently granted a provincial charter to manufacture and carry on a business in toys, furniture and other wooden products. The company will conduct lumber and timber operations in connection. Capital \$25,000. C. J. Collier and G. L. Bull, both of North Bay, Ont., are two of the incorporators.

Butler & Jones, Limited, with headquarters in Toronto and a capital stock of \$25,000, has been incorporated to carry on the business of manufacturers, importers and exporters and dealers in gum paper, coated paper, pulp, pulpwood, paper bags, cardboard paper materials, etc., and to carry on in all its branches the business of a paper mill, paper warehouse and paper dealers. Among the incorporators are R. P. Lock and Howard A. Hall, Toronto.

Work on the Southampton plant of "Panels Limited," Toronto, is progressing rapidly and it will not be long before the factory will be in operation. The Toronto plant is being dismantled and the machinery shipped to Southampton. Such is the demand, that it is doubtful if the new plant will be large enough for the requirements of this firm. In view of this, it is likely that an addition will be built some time during the coming summer.

In the gold mining districts around Timmins, where comparatively uniform wages are now being paid, and which measure up to the standard set in the silver mining camps, the migratory tendencies of the men have become less pronounced, and seem to be creating a condition entirely favorable. In addition to adding stability, as a result of less restlessness, the arrival of spring is causing the lumber camps to close, and is resulting in an improved supply of labor in point of numbers.

At a conference between representatives of the public utilities commission and the Collingwood Shipbuilding Company, H. B. Smith, president of the company, outlined the plans for the enlargement of the Kingston plant to meet the requirements of the big steamers that will ply the lakes after the new Welland canal has been finished. He was most emphatic in his statement that the company's big scheme for Kingston was a certainty, but he could not say when the work would be started.

Five actions against the Canadian Government Railways and the Dominion Construction Company for damage done by bush fires, alleged to have been caused by engines of the defendant companies, two of the cases being from McDougall township and three from Burpee township, were settled out of the court at Parry Sound, at the suggestion of Mr. Justice Logie, the presiding judge. The terms of the settlement were not made public. The Dominion Construction Company, one of the defendants, had a contract for improvement work on the railway at the time the fires occurred.

Eastern Canada

J. A. Turcott, of Barre, is erecting a new sawmill at Canton Lacorne, Que.

McDade's lath mill, Woodstock, N. B., which was recently destroyed by fire, is being rebuilt.

The directors of the St. Maurice Paper Company, Limited, will extend their ground wood plant at Three Rivers, Que.

The directors of the Brompton Pulp and Paper Company have decided

to proceed at once with the construction of a new pulp mill at East Angus, Que.

Recent Montreal registrations include the Lumber Supply Co., Limited, and the Parker Creek Lumber Co., Incorporated.

Bartram & Ball, Limited, Montreal, Que., have been authorized by supplementary letters patent to increase their capital stock from \$40,000 to the sum of \$100,000.

Ellwood Wilson, of the Forestry Department of the Laurentide Company, Limited, has been elected a member of the executive committee of the American Plant Pest Committee.

The Belgo Paper Co. Limited, Montreal, Que., were recently granted a federal charter as manufacturers and dealers in lumber, timber, pulp and other by-products. Capital \$15,000,000. A. R. Holden and C. J. Heward, both of Montreal are among the incorporators.

Five hundred mill employees of the Laurentide Company, Limited, Grand'Mere, Que., have requested the directors to establish a company store. A committee is investigating charges of profiteering and of the possibilities of establishing the store.

The International Construction Co., Limited, St. John, N. B., were recently incorporated to carry on a general lumber business in connection with their building operations. P. F. Saab and T. G. Tobias, contractors, both of St. John, N.B., are two of the incorporators.

The Bridge River Timber and Manufacturing Co., Limited, Montreal, P. Q., have been incorporated to carry on a general lumber business, manufacturing and dealing in lumber, timber and other forest products. Capital \$1,200,000. Two of the incorporators are J. Kerry and A. S. Bruneau, both of Montreal.

The Murray River Power & Pulp Co., Limited, La Malbaie, Que., were recently granted a provincial charter to manufacture and deal in pulp and paper. The company will also conduct a general lumber and timber business. Capital \$750,000. Among the incorporators are L. S. St. Laurent, K. C., and J. Alphonse, K.C., both of Quebec City.

A federal charter has been granted to Canadian Pulp & Paper Investments, Limited, with headquarters in Montreal and a capital stock of \$1,000,000, for the purpose of manufacturing and dealing in timber, logs, lumber, pulpwood, etc., and to erect pulp and paper mills, sawmills and factories. Among the incorporators are Wm. Taylor, of Montreal, and others.

A new milling company to be known as the Oak-Ridge Lumber Manufacturing Co., is to be established in the eastern part of Yarmouth County, N. S. The promoters are Capt. Ormsby Seeley, of Lower Argyle, and his three brothers. The company has recently acquired a tract of 1,200 acres of excellent timber land to the northeast of Pubnico and during the coming summer propose to erect a mill in the vicinity.

Western Canada

A new shingle mill has been built by Messrs. Butts and Nelson at Silverdale.

The Coats Shingle mill at Hoquiam was sold to the Eureka Cedar Lumber Company.

George Hanbury, son of John Hanbury, the well-known Vancouver lumberman, recently arrived home from the east.

The new sawmill of the Nicola Pine Mills, Limited, has started operations. The plant is now running in full force at Merritt, B. C.

The mill of the Smithers Lumber Co. is running again at Smithers. A new mill for Northern Interior Lumber Co. is also in the course of erection.

The federal railway commission finds that in the complaint of merchants of Qualicum Beach, B. C., a revision cannot be directed at the rates on lumber out of Qualicum, B. C.

Wall, Ellis & Company have purchased the saw mills of the McLellan Shingle Company at Mud Bay for \$8000, according to a deal negotiated a few days ago. The plant is located on the Great Northern Railway, two miles north of Colbrooke.

The Box, Crating & Manufacturing Co., Sidney Island, B. C., has been organized by the Sidney Island Brick & Tile Co. to manufacture crating and broom handles. J. S. Skeen is president and manager. About forty hands will be employed.

Among the new companies recently granted provincial charters are Alberni Shingle Co., Victoria, \$50,000; Kelley Johnson Lumber Co., Victoria, \$20,000; Townsite Lumber Co., Vancouver, \$25,000; Bonsol Creek Lumber Co., Westholme, \$20,000; Bernard Timber and Logging Co., New Westminster.

C. H. Cudemore the well-known British lumberman, recently arrived in Vancouver in the interests of the Twentieth Century Building Co. This latter company has been formed for the purpose of importing knock down houses from B. C. to Great Britain. Mr. Cudemore is of the opinion that this trade would reach large proportions in the near future.

John Brennan, pioneer lumberman of British Columbia, and one of the outstanding figures of the industry, died recently at Kamloops, B. C., aged 77 years. At the age of fourteen he became connected with the lumber industry of the Ottawa River, later transferring his activities to the Muskoka and Georgian Bay districts. He was a prominent athlete in his day.

The mill of the Mayo Lumber Co. at Sahtlam was recently destroyed by fire. The total damage done was about \$75,000, only part of which is covered by insurance. The loss includes a new lath mill, which was being installed at a cost of about \$5000. In addition, about 500,000 feet of sawn lumber was lost.

The following new B. C. companies have been granted a charter: Union Shingle Co., Limited, Mitchell Island, \$40,000; the Fanny Bay Lumber Co., Newcastle district, \$16,000; Lumber Specialties Co., Vancouver, \$10,000; Champion Shingle Co., Vancouver, \$10,000; Drywood Lumber Co., Vancouver, \$10,000; Shamrock Logging Co., Vancouver, \$10,000; Riverdale Lumber Co., Victoria, \$10,000; McBride Lumber Co., McBride, B. C., and Edmonton, \$10,000.

Would You Spend \$575 to Save \$2,000?

Last Fall a certain lumber concern in Ontario purchased a small 10 H.P. Double Drum Belt Driven Hoist from us for handling logs. This machine cost them \$550, plus \$25, freight, total \$575. They operated this small Hoist by a belt from a gasoline engine, the whole making a light, compact, portable outfit, easily moved from place to place.

They were able to work this outfit in the coldest weather, and found that it did the work of three or four teams.

As it required only one man to operate the Hoist, it is easy to figure the daily saving effected by the use of this machine. In other words, compare the wages and board of one man and the cost of a little gasoline with the wages and board of four drivers and the feed and upkeep of eight horses.

This machine handled up to one thousand logs per day.

We make these machines for either Steam or Gasoline Power, and in 7 sizes, one of which should be just right for your use.

Sales Agents: Mussels, Ltd., Montreal, Toronto, Winnipeg & Vancouver.

The Three Goodhue Belts

"EXTRA" "STANDARD" "ACME WATERPROOF"

These three brands are made for three different services and each brand is the best quality made from selected hides with the stretch taken out.

"Goodhue Belts" stretch less than any other belt by 15 to 25 per cent. This quality effects a great saving because it is unnecessary to be continually shortening the belt to keep it taut.

"Acme Waterproof" brand is made for the wet places in a mill and will give a remarkable service under the most trying conditions.

When you buy a belt—buy a Goodhue. Prices and particulars on request.

Name the five best engines in the world and in most of them, you will find our metals in the bearings.

Engine builders appreciate the importance of using a babbitt that must not fail; we fully realize that importance—that's why we place quality above price and every other consideration. *There is no speed too high, no pressure too heavy, no impact too severe, for Syracuse Babbitts.*

United American Metals Corp'n

BROOKLYN, New York

Let us help you determine what babbitt is best adapted to the requirements of your machinery.

The world-famous
Winton Engine

SYRACUSE BABBITT

QUESTION NO. 8

What difference does it make to a bearing if the babbitt is not absolutely homogeneous?

ANSWER

A non-homogeneous metal is one in which the ingredients are not unified, and such parts of the bearing where the antimony or copper predominate, are very liable to score the shaft. In alloying

SYRACUSE BABBITT

the metals are so absolutely unified that every grain is identical, physically and chemically, with every other grain.

Surely it's worth the little difference in price to know the bearings in your machinery are safe and dependable.

If It's Rubber We Make It

Rubber has become probably the most universally used material in the world. In every industry some article of rubber is used daily as an important part of the equipment. Few users recognize its utility or its quality—to them the important item is price.

When you buy rubber goods be certain that you get a Dominion Rubber System product. It is your assurance of superior quality and satisfactory service. These products include Rubber Goods for every conceivable purpose in standard stock sizes, or specially made to meet your needs, in lumber camp, factory, mill, mine, shipbuilding, marine, or other industry.

Dominion Rubber System Products

BELTING—For power transmission, conveyor, and elevator service. Bucket belts, Vanner belts, belts for lumbering, brick-making machinery, and all exposed or outside work.

HOSE—For steam, air, water, oil, acids, suction and sand—fittings and nozzles.

PACKINGS—Sheet packings and special packings for high and low pressure service, and for every other purpose.

MOULDED RUBBER—Plumbers' supplies, matting, tiling, special moulded and cut goods.

FIRE EQUIPMENT—Hose, coats, covers, reels, brass fittings, helmets, etc.

Our technical experts will gladly assist you, without cost, to select such equipment as you may require for regular or special service.

Phone or wire our nearest service branch.

Prescott's Valve Controller

Patented June 8, 1915

The Machine You Have Been Waiting for.

To eliminate every trouble with your Steam Feed Valves install one of these machines.

Six Real Reasons for Doing So:

- 1—Gives the sawyer the easiest kind of control of valve.
- 2—Hand lever stays put, making them safe against any jerk or kick of valve.
- 3—Gives the sawyer every confidence in handling valve.
- 4—Will prevent accidents—is easier on the nerves and carriage runs steadier.
- 5—Water flowing into valves from foaming boilers does not fret the sawyer.
- 6—This relief from all troubles of which sawyers have complained enables them to give closer attention to the logs they are cutting and a better inspection of the lumber they produce.

Read what one of the largest lumber companies on the north shore has to say about it.

We are sole Canadian manufacturers of these machines.

Pamphlets with full description and prices on application.

Let us quote you also on our new "Hamilton" Vertical Steam Feed Valves.

WHAT IS IT ?

PRESCOTT'S VALVE CONTROLLER

Waubushene, Ont., Sept. 11, 1917.
Messrs. Wm. Hamilton Co.,
Peterborough, Ont.

Gentlemen:—

Replying to your inquiry re Prescott Valve Controller, which you sent us last spring to try out: I beg to say that we installed this machine early in April, just previous to starting the mills, selecting the most difficult valve we have to handle, the steam having to travel through nearly three hundred lineal feet of pipe to reach this valve, and noting the fact that the pipes are well covered, there is necessarily considerable condensation, and every sawyer knows the annoyance caused by water passing through the valves which violently jars or jerks the lever, sometimes wrenching it from the hand and thereby inflicting serious damage to the machinery of the mill. And now after nearly five months of daily use, I am pleased to tell you that this device has put up all that is claimed for it. There is not the slightest jar or vibration to be felt, no matter where the lever is held. It is very easily attached and does not interfere in any way with the free movement of the lever, and the Sawyer, Mr. George Botting, also our Foreman, Mr. W. A. Gill, both speak of your controller in the most glowing terms. I can, therefore, congratulate you on securing an article that will fill many a long felt want.

Yours truly,

(Signed) D. B. Anderson,
Chief Engineer,

What You Want on Your Pulleys

A BELT WITH INDESTRUCTIBLE EDGES

PATENT

The Right Belt in the Right Place

Patent "Gripoly" is a British made product composed of 85% Pure Camel Hair and 15% Long Staple Cotton, and by its splendid qualities has won its place in the largest and most important industrial plants of Great Britain.

"Gripoly" is especially adapted to the lumber operations of this country. It is constructed to survive the severest tests of friction, strain, general wear and tear, and the many agencies that are usually destructive of belting.

Provided with indestructible edges "Gripoly" belting resists every form of friction to which belting is subjected, and is, therefore, proof against fraying. Its gripping power is perfect, and it is practically stretchless.

No acid, steam, oil, or changes of temperature can affect "Gripoly," and it is absolutely waterproof.

"Gripoly" belting has many advantages over other makes and textures, that you should know about, and on your pulleys it will prove your best investment by holding your transmission costs down to a minimum, preventing costly stoppages, and keeping your machinery going to full capacity.

**Manufacturers of
Saw, Shingle, Lath Mill and
General Machinery**

This cut represents our No. 2 Bolter, which is specially designed for cutting up small round timber into lath bolts, broom handles, pickets, short lumber or, in fact, anything that could be manufactured from small cheap material.

The machine is made quite rigid, the mandrel being 1 11-16" steel, the drive pulley 9 x 8. On our standard machine we supply a 24" saw. The carriage, which is automatic, is driven by a positive friction feed, and can be controlled by hand the same as a saw mill.

We also build this bolter with lath mill attached. This machine is known as our No. 2 combined Lath Mill and Bolter.

PETERBOROUGH ————— ONTARIO

Your day's work- and your need of sleep

© Simmons Limited, 1920

A BED is bought to sleep in.

Yet you will go into store after store—inspect beds beyond number—be told everything about styles and prices, but never hear a word about *sleep*.

Sound sleep is a state of absolute repose.

The body is relaxed—digesting food, eliminating tissues used up during the day's work, rebuilding for tomorrow.

The nerves are composed—but always alert.

No matter how sound asleep you are, your nerves catch the slight rattle of your bed, the little squeak in the spring, or feel it tremble or give. They tense the muscles. And while you may not actually wake up, there is a feeling the next morning of being "all tired out."

THERE is one organization in Canada that knows this subject from start to finish. For thirty years they have been thinking about *sleep*—producing beds that *invite* sleep.

Simmons Limited, of Montreal, makes metal beds—*good beds*—four square, steady, with not the slightest rattle or squeak. Beds you can sleep on—soundly—all night.

Their beds, springs and mattresses cost no more than the average.

SIMMONS LIMITED are the inventors of the practical *corner lock* of the Simmons bed. They are the inventors of the Waldorf Box Spring—the one spring that really *does* give freely to all the contours of the body, yet supports the spine in any sleeping position.

They are the inventors of the new *Three-piece Bed*—the spring combined with the side rails into one unit.

They are producers of beds and bed springs complete—not mere assemblers of commercial "parts."

They own and operate immense plants in Montreal, Toronto, St. John, Winnipeg, Calgary, and Vancouver.

They have given more thought than any other manufacturer to the *Twin Bed* idea, the principle of a sep-

arate bed for each sleeper—urged by physicians for years and welcomed by people of nice feeling everywhere.

The Twin Bed makes for deep repose and sound sleep. One sleeper does not disturb the other. Colds and other infections are not communicated. One sleeper does not draw on the vitality of the other. Twin Beds make for better health.

SIMMONS Metal Beds and Waldorf Box Springs are known and sold from Coast to Coast and have been for more than thirty years. Not by every dealer, certainly—but wherever there is a merchant who has given thought to *sleep* in choosing his beds and springs, you will find Simmons Beds.

The Simmons principle is that a bed is made to sleep in. This is worth remembering the next time you buy a bed, a spring, a mattress, or pillow.

And when you are selecting your Simmons Beds with an eye to their appearance in the room, you will see that Simmons has for the first time established *beautiful and authoritative design* in Metal Beds.

Sleep is a big subject! Write us for the brochure, "What Leading Medical Journals and Health Magazines say about Separate Beds and Sound Sleep." Free of charge.

GARLOCK-WALKER MACHINERY COMPANY, LTD.
TORONTO AND MONTREAL

The main drive in the mill of Gloucester Lumber and Trading Co., Bathurst, N.B. Goodyear Extra Power Belt still in use after 5 years' service.

Master Belts of Industry

Goodyear has solved the problem of belting the great main drives of industry—the backbone of production.

Experience, in a thousand Canadian plants, says Goodyear Extra Power Belts.

Because these belts are *strong*—with the strength of properly selected fabric, every thread perfect.

Yet *flexible*, hugging pulleys, taking advantage of every inch of pulley surface. Flexible because in Goodyear Extra Power Belting high-grade rubber is forced through and through the fabric in generous quantities. Every strand is cush-

ioned in it. No stitching to stiffen or weaken the belt. No separation of plies.

Its *friction* surface grips, even through dampness or dust. No slipping with Extra Power. No need for extra tight belts, pulling pulleys out of line. No need for belt dressing. No lost power.

The testimony for Goodyear Extra Power on main drives is very complete. For instance:—

The Norfolk Milling Company, of Simcoe, writing about their main drive belt, purchased a year ago, say:—

"Has been in continuous operation for one year, and has not stretched nor given us the slightest bit of trouble."

There are many others—some selected at random are:—

Swedish Crucible Steel Company, Ltd., Windsor, Ont.
 Dominion Sugar Company, Ltd., Chatham, Ont.
 Dominion Forge and Stamping Co., Ltd., Walkerville, Ont.
 Page Wire Fence Company of Canada, Ltd., Walkerville, Ont.
 Echo Flour Mills, Ltd., Gladstone, Man.
 P. Burns Company, Ltd., Edmonton, Alta.
 Hollinger Consolidated Gold Mines Co., Ltd., Timmins, Ont.
 Dome Mines Company, Ltd., South Porcupine, Ont.
 Burrard Saw Mills, Ltd., Vancouver, B.C.
 Silberton Lumber and Power Company, Ltd., Silberton, B.C.
 Woodstock Electric Railway Light and Power Company, Ltd., Woodstock, N.B.
 Gloucester Lumbering and Trading Company, Bathurst, N.B.
 Amherst Foundry Company, Ltd., Amherst, N.S.
 Hull Iron and Steel Foundries, Ltd., Hull, Que.
 Quebec Graphite Co., Ltd., Buckingham, Que.

The complete story of Goodyear Extra Power Belts on main drives is interesting. There are facts about other types of drives just as important to you. Let a Goodyear belting man call and talk to you. No obligation. Just phone, wire or write the nearest branch.

THE ECONOMY OF "BELL" OPERATION

Your haulage cost can be reduced to a minimum by the employment of a Bell oil burning geared Locomotive—while at the same time it will be performed with the greatest efficiency. Here are some of the reasons—It will operate on the cheapest fuels, kerosine, fuel oil, distillation or crude oils. It is easily operated by one man, with one valve fire control.

There are no ashes or sparks to fly out. This eliminates fire hazard. The engine is of standardized design—all parts being interchangeable, and kept in stock for immediate delivery. It has fifty per cent. greater haulage capacity than direct connected type locomotive of equal weight.

TAPATCO
REGISTERED BRAND TRADE MARK

GLOVES & MITTS

Well Known in the Lumber Camps

There must be more than ordinary quality in a work-glove to stand the lumber-camp test. The lumberman does not handle things gently—he works. And he wants a glove that will work with him. He has found such a glove in the TAPATCO Brand—and he likes it so well that thousands of these gloves go into the woods every year to help bring in the logs.

The styles the lumbermen like best are our heavy weight Canton Glove and the leather-faced glove which we make for heavy service.

"TAPATCO" COLLAR PADS

Keep the Horses Fit

A Pad so well made that it gives long service—with hooks so secure that they do not work loose. Use these pads to protect the necks of your horses. They prevent friction and so remove all possibility of sores, galls, and chafing.

"It's as wrong to slop over as to leak"

THAT was the criticism a famous mathematician used to make of careless work in his class-room. It applies to losses in power transmission through "overbelting."

Unless your belting is working under specifications laid down by engineering practice it is probably spilling or leaking a part of its power load.

One hundred per cent results can be obtained only through using the one right quality and size of belt on each specific drive. The one right belt can be selected only by working out the engineering problem surrounding each drive and harnessing the drive with the belt built to meet

that particular transmission demand. Guesswork in handling your power transmission is a costly variable.

In order that belting users might enjoy full results from their investment the Graton and Knight Standardized Series of Leather Belting was built up. It is standardized in its manufacture and in its application. It will supply the right belt to meet every power transmission need.

Graton and Knight Leather Belting quality rests on a sixty-year record in supplying thousands of the best belted plants in America. Graton and Knight expert service aims to make efficient application of belting to power transmission needs.

Write for our book "Standardized Leather Belting."

Graton & Knight

Standardized Series

Leather Belting

Tanned by us for belting use

A 30" Neptune Brand Double Leather Belt which has already been in service 10 years in the Thomasville Electric Light Plant, Thomasville, Ga. Neptune is the Pioneer Waterproof Leather Belting. It is made in all plies and widths from strictly first quality center stock oak tanned leather. It is guaranteed to be absolutely impervious to water, and for this reason is recommended for use wherever belting is exposed to dampness or unfavorable climatic conditions.

All that a Good Saw Gumming Wheel Should Be—Plus

IN a sentence is summed the features of the Aloxite Saw Gumming Wheel.

Clean, cool, fast cutting, it does its work so well that it has become the standard in hundreds of mills, big and little.

It is a wheel that you can trust your saws to. It holds its shape, stands up to the work without frequent dressing—saves on wheel costs—saves time—keeps the saws on the job.

Carborundum Products are:
Carborundum and Aloxite Grains and Powders, Grinding Wheels, Sharpening Stones, Paper and Cloth, Garnet Paper and Cloth and Carborundum Refractories

Oldest and Best

HOE

Chisel Tooth Saws Choice of Lumbermen Everywhere

The even temper of these saws and the fine quality of steel from which they are made have proved Hoe saws reliable for nearly one hundred years.

More than one hundred thousand "Hoes" are to-day successfully sawing lumber in all parts of the globe. The Hoe Chisel Tooth Saw, invented 40 years ago, is still the best for cutting hardwood.

Rubber Goods FOR LUMBERMEN

Belting Our long experience in the making of Rubber Belts enables us to specialize on this line. "P.M.S.," "Special Drive" and "Lion" are our leading brands for power transmission.

Packings "Redstone" High Pressure Sheet Packing has proved by test that it will outlast any other similar packing on the market. We make Spiral and Ring Packings, etc., that are equally reliable.

Hose for Steam, Water, etc., in various grades, made especially to give satisfactory and economical service under different conditions.

Fire Hose One or more of our twenty brands of Fire Hose will be found, not only in the best equipped Factories, Mills, etc., but in almost every Fire Department in the Dominion.

LUMBERMEN'S

EQUIPMENT

For Rapid And Continuous Work Put In Our No. 3 Lath Machine

From the standpoint of speedy work, convenient handling, and durability under the strain of continuous running, you could not install a better, more reliable machine than this No. 3 Lath.

It is doing splendid work in many of the largest mills, and we have received a number of expressions of approval from

lumber manufacturers on the accomplishments of this No. 3 Lath Machine in speeding output and in promoting quality of work.

Floor space required, four feet by four feet, six inches; weight, 1600 pounds.

Waterous

Kendall Nigger

The "WATEROUS KENDALL NIGGER" overcomes the greatest drawback experienced in the ordinary steam nigger—the chance of accident unless operated by an expert.

Where the carriage is of medium weight, unless in the hands of an experienced man, the danger of wrecking the carriage is especially great.

The "WATEROUS KENDALL NIGGER" is practically accident-proof. While it possesses both the speed and power of the ordinary Steam Nigger, it is so designed that a green operator can do quick and effective work without endangering the carriage in any way.

By attaching the Nigger Bar to one cylinder only, one motion of the operating lever turns the log and a quite distinct and separate motion is required to load it.

The stroke of the cylinder controlling the loading motion is made very short and thus further precludes the possibility of a serious mishap.

The Kendall Nigger is constructed to be powerful and rapid in action. The cylinders are 10 in. and 8 in. in diameter, pistons are steam cushioned at both ends of stroke, valves are adjustable to permit increase or decrease of operating speed without affecting the power in the machine.

Nigger Bar is of wrought iron, dogs are extra wide, top dog is winged, a steel roller is supplied. No floor plate is necessary. All lever and crank connections are made short and direct, so that the machine gives instant response to the movements of the sawyer's lever.

A great many of the Niggers are already in use in mills, where speed and accuracy on the log deck are essential, but where a medium weight carriage is operated. If your conditions are similar the WATEROUS KENDALL NIGGER will give unequalled satisfaction.

Waterous

Kendall Nigger

The "WATEROUS KENDALL NIGGER" overcomes the greatest drawback experienced in the ordinary steam nigger—the chance of accident unless operated by an expert.

Where the carriage is of medium weight, unless in the hands of an experienced man, the danger of wrecking the carriage is especially great.

The "WATEROUS KENDALL NIGGER" is practically accident-proof. While it possesses both the speed and power of the ordinary Steam Nigger, it is so designed that a green operator can do quick and effective work without endangering the carriage in any way.

By attaching the Nigger Bar to one cylinder only, one motion of the operating lever turns the log and a quite distinct and separate motion is required to load it.

The stroke of the cylinder controlling the loading motion is made very short and thus further precludes the possibility of a serious mishap.

The Kendall Nigger is constructed to be powerful and rapid in action. The cylinders are 10 in. and 8 in. in diameter, pistons are steam cushioned at both ends of stroke, valves are adjustable to permit increase or decrease of operating speed without affecting the power in the machine.

Nigger Bar is of wrought iron, dogs are extra wide, top dog is winged, a steel roller is supplied. No floor plate is necessary. All lever and crank connections are made short and direct, so that the machine gives instant response to the movements of the sawyer's lever.

A great many of the Niggers are already in use in mills, where speed and accuracy on the log deck are essential, but where a medium weight carriage is operated. If your conditions are similar the WATEROUS KENDALL NIGGER will give unequalled satisfaction.

Ask for details and descriptive catalog No. 123

EDDY FIRE PAIL**

Note how light it is and how strong. No metal to rust or corrode, no hoops to shrink or fall apart. Made of Eddy's Indurated Fibreware, moulded, pressed and baked all in one piece with a rounded bottom that assures its being always in its rack or on its hook—where you want it when you want it.

Made by Eddy at Hull and used all over Canada

The E. B. Eddy Co., Limited, - - Hull, Canada

ELIMINATES SLIPPING

PATENT

WITH • TRIPLE • TWISTED • INDESTRUCTIBLE • EDGES.

CONSERVES POWER

THESE EDGES

are composed of indestructible strands interwoven with the solid body of the belt.

Proves its Economy on the Heavy Drives

A solid woven waterproof belting with patent indestructible edges that cannot fray, composed of 85 per cent. pure camel hair and 15 per cent. long staple cotton, "Gripoly" is made to "grip the pulley" without slipping.

The saving effected in power alone should be sufficient to recommend "Gripoly" to lumber operation. Its wearing tenacity makes it a real investment.

"Gripoly" will insure the utmost supply of power constantly and do so at a minimum of belting expense. Write for information to—

Making Good Lumber

The product of a good run of logs is often spoiled by poor sawing.

"Crowding" the saw results in snaky lumber, or thick and thin boards.

Our lumber is carefully sawn; is uniform in thickness and width and properly trimmed and edged.

The marking on the trimmers is looked after by inspectors with years of experience assuring you the same grading each year.

McFADDEN & MALLOY

Red & White Pine **LUMBER** In Any Quantities

The above is supplied by us in all standard grades and dimensions. All lumber is of guaranteed quality and grade as ordered. Our location and facilities enable us to give our

patrons the utmost in service and prompt shipments. Let us quote on your requirements. You will find our prices right, and our product satisfactory.

Mills at : - SPRAGGE, ONT. & BLIND RIVER, ONT.

Yes! It is Quality Lumber

Our record of fifty years in successfully serving the Canadian Lumber Trade is proof of that claim. Yet our prices are always such as to leave the merchant a liberal profit and ensure him a brisk turnover.

Selling good lumber at a fair price can only mean one thing—greater

business. That's why we have customers who come to us season after season for their needs. They know it pays.

What are your requirements in
Pine, Spruce, Hemlock, Hardwoods,
B. C. Lumber and Timber?

WIRE YOUR ORDERS AT OUR EXPENSE

209 Winch Building,

VANCOUVER, B.C.

Many Eastern Canadian Firms have never used either WESTERN SOFT PINE or WESTERN YELLOW LARCH.

The extremely heavy demands for lumber in 1920 may force them to use these woods. We hope so, and also that some of our product may be available, for we know we will then have made many life long friends.

How to Reduce Costs of Building

Buy our "Utility" grades of Siding (made in Sitka Pine or Fir), and Flooring (Fir only). They effect a 20% saving. They satisfy the contractor because no extra labor cost is necessary and consumers appreciate the receipt of maximum value for their dollar. If you have not used "Utility" grades, write us—no others produce them.

Best Stock for Factory and Pattern Lumber

Ask **LOUIS WUICHET Inc.**
Room 712 Railway Exchange, CHICAGO, ILLINOIS

**B.C. Red Cedar
Shingles are now
being packed on
the "Square Unit" Basis**

The mills connected with the Shingle Agency of B. C. are now packing Red Cedar Shingles on the "Square Unit" basis. As rapidly as possible (with regard to stocks on hand) it is proposed to make the "Square Unit" basis the universal standard in the handling of the product.

Under the "Square Unit" shingles are packed so that each unit contains sufficient shingles to cover 25 square feet of surface on a basis of a fixed standard of weather exposure. Four bundles will cover the popularly accepted decimal standard of 100 square feet.

16 in. Shingles are packed 22-22 to the bundle and provide a surfacing unit of 25 square feet on the basis of 4½ in. exposure to the weather.

18 in. Shingles are packed 18-18 to the bundle and provide a surfacing unit of 25 square feet on the basis of 5½ in. exposure to the weather.

In packing Shingles according to the "Square" unit rule, the Shingle Agency believes it is taking an advance step. The method provides for the computation of surfacing on a basis which is easily understood by the consumer and conforms with the standard of measurement of the "square" which is generally accepted as the standard of measurement in all building and contracting operations.

Any special enquiries from dealers with reference to the new standard will be given prompt attention.

ADVANCES ON APPROVED CONSIGNMENTS

Seventeen Years' Experience

Tudhope-Anderson Detachable Lumber Trucks

Unequalled stand-up-ability on tough, rough and soft road-beds are the tests that explain the widespread popularity of these sturdy trucks among lumbermen. Cut shows Front Hauling Gear No. 41 coupled to Hind Gear No. 42. One or more Hind Gears may be attached or detached with ease.

Look at the wide tire steel wheels. They mean easy hauling. We guarantee them. Spokes may be renewed in case of accident—not so with others. Axles are high quality square steel ensuring many years' service. Wood parts are best oak, air-seasoned and kiln-dried. All parts well ironed and braced.

Built to the following specifications:—

No. of Truck	Size of Steel Axle	Tire Inches	Wheels	Frame Length	Width
41 Front Gear	1 ¼" square	4 x ½	26
42 Hind Gear	1 ¼" square	4 x ½	42	5 feet	40 inches

Here We Are Again

MacLean Machine Works,
Campbell's Bay, Que.

Dear Sirs:—

I am well satisfied with the feed-works I bought from you. I have used it for three seasons and I find it perfectly satisfactory. It runs my carriage steady at slow or fast feed.

I would not use any other.

Yours truly,

A. PROUDFOOT.

Mr. Proudfoot replaced a steam feed with one of our machines and states he saved enough wood in three months to pay for machine.

FULL PARTICULARS ON REQUEST.

The Machine That Made a Record in a Recent Lath Cutting, 10 Hour Test

Four Hundred Sawmills in the Dominion are to-day using this machine.

It has all the latest improvements and for quick, clean work has no equal.

The Payette No. 1 Bolter will cut, count, tie and pile 128,350 laths in a period of ten hours. The above consisted of 4 foot laths, 1 1/2 by 3/8 inches, and constitutes a record in rapid lath cutting.

If you are not using a Payette No. 1 Bolter you should be.

Shall we send you full particulars and prices?

P. PAYETTE & CO.

J. T. PAYETTE, Proprietor

PENETANG, ONT.

SIMONDS SAWS

Simonds Inserted Tooth Cut-Off Saws stand heavy feed and do not crack.

They are economical because teeth can be renewed at slight expense.

Feeding the Camp

IF that is your problem, remember that it is our business, too. We do a tremendous lumber camp trade and are fully acquainted with the food requirements of logging camps. We shall be glad to quote you on any lines you need this year, and will submit special quotations if you will drop us a card. We can supply you with all that's best in provisions and fresh meats, and give you a service you will appreciate

TERMS OF SUBSCRIPTION

Canada, United States and Great Britain, \$2.00 per year, in advance; other foreign countries embraced in the General Postal Union, \$3.00.
Single copies 15 cents.

"The Canada Lumberman and Woodworker" is published in the interest of, and reaches regularly, persons engaged in the lumber, woodworking and allied industries in every part of Canada. It aims at giving full and timely information on all subjects touching these interests, and invites free discussion by its readers.

Advertisers will receive careful attention and liberal treatment. For manufacturing and supply firms wishing to bring their goods to the attention of owners and operators of saw and planing mills, woodworking factories, pulp mills, etc., "The Canada Lumberman and Woodworker" is undoubtedly the most direct and profitable advertising medium. Special attention is directed to the "Wanted" and "For Sale" advertisements.

Authorized by the Postmaster-General for Canada, for transmission as second-class matter.

Entered as second-class matter July 18th, 1914, at the Postoffice, at Buffalo, N. Y., under the Act of Congress of March 3rd, 1879.

Vol. 40

No. 10

Co-operation in the Safety Movement

The importance of Safety work has been brought home to the readers of the "Canada Lumberman" in various reports of annual gatherings and Associations whose main object is to arouse interest and develop co-operation in connection with this modern movement. In the sawmill, planing mill, the pulp mill, the slasher, etc., the cry is for added production. Every effort is being directed toward crowding the equipment so that the largest output may be maintained from day to day. In this mania, this desire for speed, workers, incited by extra pay or a spirit of rivalry, are, perhaps, inclined to grow indifferent. The result is a larger percentage in the "casualty list," to employ a military term. A perusal of the daily papers reveals the number of untimely deaths and permanent disabilities, not to speak of mishaps of a temporary character, which seem to take place on every hand. No community appears to be exempt, and it is safe to say that 90 per cent. of these accidents and deaths in industrial plants and on city thoroughfares are caused either through the carelessness and shortsightedness of the victims themselves or lack of judgment, foresight and discretion on the part of others. Life at best is short enough, measured by the span of years, and when one sees the increasing number that are being cut off in their youth or prime, the record is appalling.

At a recent annual meeting of a Safety organization, the engineer of that industry took particular occasion to drive home a few plain facts which will bear repetition in the lumber and logging lines. Here is a digest of his observations and deductions which are of more than passing interest and worthy of serious attention on the part of those associated with the management and direction of industrial enterprises.

This is an opportune moment to recapitulate the fundamental principles underlying the Safety Movement. The movement is based on the co-operation of the management, foremen and employees. It

is in the interest of all, and the duties of each can be clearly outlined. An efficient Safety organization starts at the top. The management must do its part not only by a show of interest, but an active interest in giving effect to reasonable suggestions involving the safeguarding of physical hazards, sanitary conditions, lighting, plant housekeeping, etc. A Safety organization to get anywhere must be backed by enthusiasm on the part of the management. If this is the case it is not long till every foreman and employee realizes that the Company is, indeed, earnest in its efforts to make the plant safe.

The duties of the Superintendent are in effect the same as the management, but coming in direct touch with all foremen, his enthusiasm is communicated to his assistants and brings about wholehearted and intelligent co-operation. Where the Superintendent is not enthusiastic, Safety, if thought of at all, is treated as a side issue, whereas it should be considered of as vital importance as any other operating department. Only when this is the case will production benefit to the full from the Safety organization.

The duties of the members of Plant Committees are all embracing, in that the spread of interest throughout the whole industry depends on how they conduct themselves in the carrying out of the ordinary duties of their employment. The members of Committees should be examples to their fellow-employees, ready and willing to give a word of warning or advice to new men, keeping their eyes open to detect unsafe practices, dangerous places, defective lighting, exposed electric wires, etc., and making suggestions for the correction thereof; encouraging other employees to make suggestions and doing everything possible to establish a feeling of pride in their employment among their fellow employees. It is fatal to the success of the movement to have men acting on Committees who themselves take the very chances they warn others to avoid. Foremen, form the arch in the whole structure. There is no class of men in the mill who can more quickly or more effectually damn Safety work than the foremen if their sympathies have not been aroused and their interest secured.

The foreman is the man most intimately acquainted with the men, as he knows all the physical hazards of the work upon which his men are engaged; therefore, it follows that a foreman who is interested in Safety and is persistent in his efforts to prevent accidents will have few mishaps. The foreman should feel that if one of his men is injured by a preventable accident, he is to a certain extent responsible, or if he knows that employees under his charge are indulging in practices which involve risk to themselves or others, he should eliminate such practices, as otherwise he is morally responsible for any accident that may result therefrom. If all the interests mentioned could be brought to act in unison, it would be an easy matter to have a successful "No Accident" week, month or even year in any mill.

Boomerang Business—Does It Pay?

There has recently been introduced by Senator Underwood at Washington legislation which has in view the opening of negotiations with the Canadian provincial governments to see if they will not lift the restrictions on pulpwood on Crown lands and allow its free export from holdings or leases that are in the hands of American industries. The Senator even goes so far as to say that if the bars are not let down, that the United States should adopt retaliatory measures. Inviting reprisals is a boomerang business in the present age and generation. It is a game at which two can play, is mutually destructive, and never gets any firm or nation very far on the road to achievement or expansion.

There is no restriction in the matter of the export of pulpwood from private lands, and the settlers of Ontario, Quebec and the East still have a world-wide market. From time to time there has been an agitation that the federal government should enact a law completely cutting off the export of all pulpwood, but this measure has been regarded as too drastic, and met with the opposition of several members of Parliament, particularly those from the rural sections. The embargo on Crown lands is a matter purely of provincial administration, and the powers that be at Ottawa have noth-

ing whatever to do with the regulations that have been in force for many years now.

The whole situation has been discussed in the press and on the part of Canada, the proposed course of Senator Underwood and his threat have been received with tolerance and good nature.

Prior to the embargoes being placed upon pulpwood on Crown lands calling for its conversion into pulp or paper before leaving Canadian territory, there were few paper and pulp mills in the Dominion. Only limited employment was given lumberjacks in divesting the country of its great natural resources, but as a result of the wise precautions of Ontario, Quebec and New Brunswick, flourishing towns have sprung up in a number of centres, and whole communities have been changed from a wilderness into thriving, modern, progressive municipalities.

There is no industry which of late years has made such rapid and effective progress in the Dominion as pulp and paper. A decade or more ago every company had a struggling existence, for there were few who would venture a dollar in such propositions and, for a long period, many undertakings were carried on at heavy financial loss, but this is a story for another occasion. As far as removing the barriers on the export of pulpwood is concerned, the policy of Canadians will be one of development of their own assets, and here is the dispassionate way one leading authority has summed up the situation. He states that the very loss, of which Senator Underwood complains in the United States, has saved Canadian forests from being stripped, and his confession that the fact that the companies across the border have denuded their own lands, demonstrates that they would do the same if given carte blanche on this side of the 49th parallel.

In regard to retaliation in the matter of coal and sulphur, this is well summed up in the following statement:—

"The Senator's threat to stop Canada's coal unless we hand over pulp wood is ridiculous. Look at the figures. We buy from the United States \$60,000,000 of coal per month. We are her best customer. She buys from us less than \$10,000,000 a month in paper and pulp. To put the lowest figure call the year's coal \$500,000,000. Would the United States sacrifice half a billion to get a hundred million?

"Canada would then prevent Maritime Province coal going to the eastern states and use it herself. Nothing in that threat but words.

"He also makes the threat of cutting off all our sulphur. We use \$5,000,000 of sulphur yearly and will soon be quite independent. So that does not figure.

"But supposing for instance we did let them have the pulp, would it give them more paper? No, for the reason that every mill in the United States is working to capacity and more wood would not give them an extra pound of paper."

Loyalty in the Midst of Unrest

Of the many causes which have contributed to the high cost of lumber, one of the most important is the lessened efficiency of the men in the woods. The war resulted in great changes in this section of lumbering operations. Many men enlisted and others were attracted by the large money to be earned in munitions plants. Among these were hundreds who had been trained from their boyhood in lumbering, and the scarcity of help thus caused naturally had its effect on the cut and on prices.

With the end of the war, many men did not return to their former occupations, and even those who joined up again were affected by the wave of unrest which has since ruled the world. Reports indicate that notwithstanding the enormous advance in wages, the men who are engaged in woods operation are not giving of their best. They are independent, demand concessions of a fantastic character, and will leave the job without any apparent cause. Many of the men are foreigners, who have revolutionary ideas, and who have replaced the old time lumberjack, who had, at least, some idea of loyalty to his employer.

The French Canadian has been least affected by the I. W. W. and Socialist propaganda. While the men in the West and in parts of Ontario have been more or less impressed by Red doctrines, the

men in Quebec have, as a rule, been deaf to the appeals of the agitators. By nature and training the French Canadian is conservative—the existing order is good enough for him, and he declines to be led into paths of reckless revolution. He has his defects, like everyone else, but, at any rate, he is not to be scared or cajoled into believing that a new heaven and earth can be created by turning industrial conditions upside down and destroying capital.

The Inadequacy of Postal Stipends

Postmasters have long hours, exacting duties and many "bosses," particularly those in rural sections and smaller towns. The people apparently believe that it is perfectly justifiable to find fault with the local P.M.'s when the mail is misdirected or delayed in arrival or any of a score of one things occur to interrupt delivery facilities. Postmasters are supposed to be on duty early and late, and to-day they complain that, not only through the inadequacy of remuneration, are they unable to maintain themselves and their families in decent, comfortable style, but they are losing valuable and experienced assistants.

The allowance made by the Government is not generous and the Canadian Postmasters' Association recently set forth a frank statement of their case. Some really startling facts are brought out which present a bird's eye view of payments made to these public servants for salaries during 1919. In nearly 8000 offices the pay was 19c a day; 670, 24c; 1450, 48c; in 660, 80c; in 480, \$1.12; in 321, \$1.45; in 360, \$1.80; in 175, \$2.10. The highest remuneration was \$13.00 per day. This applies only to some thirty large centres where a staff of five assistants or more is required.

A schedule has been adopted by the Canadian Postmasters' Association and submitted to the federal authorities for consideration. The demands are certainly not excessive in view of the high cost of everything that the dispenser and despatcher of mail matter eats, drinks and wears.

The schedule is:—\$100 Minimum. Salary, abolition of commissions; but till salaries can be established on an equitable basis, the following commissions be paid for financial years ending March 31st, 1917, 1918, 1919, 1920 and 1921. 70 per cent. on the first \$1,000 of revenue; 40 per cent. of revenue over \$1,000 up to \$2,000; 30 per cent. of revenue over \$2,000 up to \$10,000; 20 per cent. of revenue over \$10,000. Rent, graduated scale now in use to be abolished. A minimum of \$25 be paid to every office and while commission remain in force 10 per cent. on revenue to be the allowance to cover the items of rent, light, fuel and caretaking.

Forward duty to be paid for both direct and indirect service at the rate of 15 per cent. commission on revenue of the offices served. City Postmasters to get 50 per cent. increase.

City Sub-offices to get 50 per cent. increase of salary and 3 per cent. commission on sale of postage stamps.

What Lumber Salesmanship Involves

There are varied conceptions of salesmanship. Some retail lumbermen think that when they have given a man what he asks for or requires and the deal has been closed, this is all that is necessary. True, the isolated transaction has been completed but that is not the Alpha and Omega. Salesmanship means very much more—not only satisfying the customer and selling him something that fits one's stock to the best advantage, but creating an impression in that caller's mind that he received a square deal, that you know your business and have rendered him good service. With this in view, he will return to your yard the next time that he has need of anything in structural commodities.

There is something subtle and undefinable which takes the majority of us to this merchant or that to have our wants supplied. We cannot exactly explain it and it is not altogether attributable to force of habit. It is due rather to an unconscious influence or instinct that exerts itself and sends us to the place we were before if we find that everything has resulted satisfactorily.

In the development of the subject of selling, many interesting points on the advantages of good salesmanship in the lumber yard have been brought out. Each dealer can add something anew from

Watchman! What of the Night?

WHETHER the action of the banks in issuing instructions for the curtailment of current loans has been the cause or whether the bankers merely interpreted indications of changing conditions, the fact remains that the past week has been marked by certain developments which tend to confirm observations that the end of the upward movement in prices seems to be within sight and that public apprehension is beginning to develop with attendant effect upon buying power.

Perhaps no more significant incident to emphasize the turn of events could be offered than the announcement of the big Wanamaker store in Philadelphia that all prices would be cut to make an average reduction of 20 per cent. Further it is stated that the store policy will be to make new purchases only on a basis which will permit of this reduction being made. The lead of Wanamaker will have a wide influence. Whether any such action will be taken by the big stores in Canada is a point upon which no information is available, but it is reported that one of the mammoth retail concerns has had the quietest period for the spring season of the past ten years. Certainly an effort is being made to make prices more attractive, to judge by the advertising.

It appears that clothing and apparel lines are being hardest hit. Whether this is the result of very unfavorable weather the public disapproval of high prices, as evidenced in the overall campaign, is having its effect upon consumption cannot be definitely answered, but perhaps it would be best to say that it is the effect of the combined influences. While there had been no tendency to produce in excess of prospective demand there is no doubt but that such unfavorable weather as we have experienced has tended to bring about an accumulation. Then it is reported that a lot of Japanese silks were dumped into Canada with some effect upon the market for dress goods and linings, and in the clothing trade there was an effort made prior to the last settlement with labor to get considerable stocks ahead to provide an available surplus in the event of tie-up.

Altogether the situation in the clothing and apparel trades indicates that high prices are having their effect and that people will endeavor to make their clothes wear longer rather than pay higher prices and, as previously stated, it takes but little slackening of demand to result in over-production and that is far from healthy at the present cost levels. In the hat trade, for instance, these tendencies are strongly in evidence. With practically no spring weather until this week the habit of getting the "old one" cleaned and blocked has increased, with the result that the average man is going from winter to summer so far as his headgear is concerned. Price and weather have both been factors here also.

In other lines there do not appear to be the same indications of a

reaction. True, speculation has been very largely discontinued under the double influence of curtailment of loans by the banks and the growing belief that it is not a time to stock up. In foodstuffs there is no indication of weakening prices nor does it seem likely that there will be any marked change until there is some marked increase in supply, for it does not appear likely that consumption can be further reduced to any marked extent.

In the steel and other metal trades the situation is firm. Here the shortage of material is still maintaining prices, but there is no tendency to buy stock at present quotations. Steel is being bought for quick consumption on a premium basis and few chances are being taken. In hardware lines there appears to be a fair spring movement and prices are firm to strong.

The general outlook is for higher rates of money. Capital is being demanded in many directions and interests are strengthening. The second decline in Victory bond quotations in a few weeks is an indication of the trend of money values. Bond dealers foresee difficulties in securing the funds desired for provincial and municipal purposes at anything like satisfactory rates. Should the Dominion Government desire to float a loan this fall it is hard to see how this can be done except at rates which will discount previous issues. However, it is more than possible that there is a connection between the Government's plans and the course being taken by the banks in putting on the brakes.

Higher rates on mortgage loans appear to be inevitable under such conditions. The general situation in the money market will be reflected here. This promises to add further uncertainty to the building situation. There is little to encourage the speculative builder and much to discourage him. Building will, therefore, be largely confined to those who are making homes for themselves. The solution of the housing problem seems as far off as ever.

The outlook for prices for building materials is very unsettled. Dealers and manufacturers say that they can see no reduction in costs and, therefore, nothing to warrant lower prices. On the other hand, it is understood that the policy of the banks may mean that some dealers will have to dispose of at least a portion of their stocks and this may force supplies onto the market.

Altogether it is a very unsettled situation and one in which the wise business man and investor will watch developments closely. And in sounding this word of caution we would like it to be distinct from pessimism. The position which Canada occupies to-day in world's relations leaves no room for pessimism. The world is waiting for our goods. If we cannot produce and market at prices to compete with other nations under present conditions then a readjustment is inevitable—and the sooner the better.

his extensive store of experience, and here is what one western manager has to say on the topic and particularly in regard to the keeping of stock.

"If one has a normal stock it is seldom necessary to allow it to become poorly balanced. There is no occasion for sending out 16-foot flooring, siding, ceiling, etc., when a little inquiry will determine in most cases that some other length would suit the purpose better, which in turn would allow one to keep his stock better assorted and permit of a lower average investment.

"One should continually keep a revised list handy at all times, showing slow selling stock, odd sizes of windows, damaged doors, and, in fact, any items which will require special effort to sell. A 2 x 4-16 or any other strictly stock item moves very readily, but selling attention should be directed especially to items which threaten to become slow sellers.

"With a prepared list of such stock, one is enabled to keep the less saleable items more nearly at a minimum than otherwise.

"Salesmanship is not so much a matter of experience, education or ability, as it is being alert to the situation, applying oneself, being pleasant, indulgent and attractive, knowing one's stock and taking time to go into the merits in detail of any article we may be trying to sell—remembering that because we know the uses and adaptability of certain stock is no sign the customer does. A little explanation regarding manufacture, composition or uses goes a long way toward making a sale.

"In the majority of cases a customer appreciates being waited on quickly. This serves the double purpose of impressing upon the customer the business-like methods of the salesman, as well as permitting the salesman to be more efficient by being in position to more quickly resume some other task or wait on some other customer.

"When we hear of some one who is thinking seriously of building, we try to be the first one to send him some building literature. We write him a personal letter, later making a personal visit to

explain the service we are able to render him. Follow up each building 'clue' and the results very shortly will be worth while. If you do not, the other fellow will—and the business will go to him.

"Any items of lumber, shingles, roofing, paint or anything else have abundant talking points if a salesman will only bring into display the merits each article possesses.

"It is hardly possible to dwell too long or too seriously upon the importance of trying to care properly for the requirements of each customer. Even if the individual sale of some small item may be an expense instead of an asset, consideration of the customer's future trade is far better than to tell him in an uninterested manner that we do not have what he wants and calmly allow him to make his purchase elsewhere."

Here is a grand and glorious chance for the lumber business in the Dominion! H. H. Stevens, M.P. for Vancouver, is out with a brand new, original and novel idea for a partnership between the federal government and the industrial, commercial and financial forces of Canada. This is his proposal in brief and in his own words: "I propose that this commonwealth, by the action of its Parliament, and through the agency of its Government, should enter into partnership with the industrial, commercial and financial forces of the country, replacing antagonism and jealousy with a common purpose. Such partnership to be attained by a taxation or profit-sharing scheme similar to the business profits tax in form, but instead of withdrawing the amount of the assessment in cash from the business, it shall be capitalized and remain in the business as new capital, ranking as preference stock and bearing interest or dividends as earned. Such capitalized surplus earnings shall become the property of the state. In other words, the state will become a shareholder in the business to the extent of the assessed portion of the surplus profits. Surplus profits would be estimated and assessed on a similar principle to that now followed in business profits tax."

Rapid Expansion of Railway Tie Industry

Where the Timber Comes From for Canadian Transportation Lines—How It Is Cut, Sawn, Treated, Marketed and Distributed—Woods Best Suited for Sleepers

It requires annually 20,000,000 ties—or sleepers, as they call them in the Old Country—to replace those on the 39,000 miles of Canadian railways, which, through wear, weather, strain and decay, are rendered unfit for service. In the United States the quantity needed every year for a similar purpose is 127,000,000. Owing to the building of many new lines, during periods of rapid development a much greater supply is called for, but within the last five or six years very little work has been undertaken in the way of extending the transportation systems of either Canada or the United States. Roadbed must be maintained in safe condition year in and year out, whether times are good or bad. With the development of the railway interests, the tie industry has grown appreciably. Not many years ago the railways entered into agreements with contractors or large jobbers in various sections of the country to furnish them with the requisite number of ties. Now the supply is obtained through companies who make a specialty of the business and do all the purchasing required from farmers, settlers, jobbers, sawmill men, lumber manufacturers and others who may have timber suitable for this purpose. During the period that the United States railways were operated by an Administration Board at Washington someone conceived the idea that such firms as make a business of providing ties for the railways were merely middlemen—a sort of fifth wheel to the coach. They were regarded as an unnecessary adjunct, an incubus upon the price of the product as well as its production, and with one fell swoop, the U. S. Administration eliminated them and sought to do all purchasing direct. The result was trouble and difficulty of every kind. Perplexities developed by the score in the matter of securing quantities, delivery, inspection, etc. A shortage of over 40,000,000 ties in Uncle Sam's domain, was the outcome. In Canada there is, at the present time, no scarcity of ties, although during the war they were none too plentiful in many sections.

Cutting Trees in Days of Yore

The history of the tie industry is as old as that of railway construction itself, and the only complaint heard by some tie producers is that prices in this department are not keeping pace with the values that prevail in other lines of forest products. There has been practically no increase in the quotation for cedar ties, while hardwood ties have gone up over 100 per cent. in the last five years. In the olden days when labor was cheap and material in the more central districts plentiful for the making of ties, many sawmills turned out thousands each year. They could do so at a fair profit and the manufacture of ties worked in advantageously with the other departments of the mill, but logs began to be farther removed from the mills, woods operations become more difficult and costly, wages jumped rapidly, the cost of living increased, but the price of ties remained practically the same. The result was that a number of mills went out of this line of business, claiming that there was no money in sawing ties. In certain sections of Canada to-day, ties are produced merely as a sort of stop-gap convenience, a marker of time or as a pot-boiler; in other words, little or no money is made on them

Peeling Ties in a Busy Yard in Northern Ontario

because prices have been kept down, and there are few, if any, plants in Canada which now devote their attention exclusively to ties.

Of course, things may change in the near future. The same observations relating to the value of ties ruled in the lath market a year ago. There was an abundance of lath on every side and no one wanted this material. In six months everybody wanted it and prices began to climb to an unheard of height. The result was that many firms, who had neglected this branch of the industry, are now devoting particular attention to it, and the production of lath in eastern Canada will be the greatest of any period during the past decade. It is probable, too, that the quotations for ties may some day start aviating, and both the pole tie and the squared tie bring a return commensurate with what they would, if converted into lumber and disposed of at the prevailing rate.

It is not the intention to trace the development of the tie industry from its inception down to the present, although a passing reference to expansion on this line of activity may not be amiss. Many years ago hemlock was the main timber in Canada from which ties were made. This wood disappeared, to a certain extent, and to-day ties are made of practically all woods. White oak, red oak, beech, birch, hard maple, white ash, second growth elm, cherry, chestnut, cedar, tamarack, and last, but not the least, jack pine, have the call.

The Pole Tie and Squared Tie

Ties are mostly divided into two kinds—pole ties and squared ties. The pole tie is generally divided into No. 1's and No. 2's, the difference being the width of the face. The same applies to No. 1 and No. 2 squared ties. No. 1 pole tie usually has a face 6 in. to 10 in., No. 2 pole tie 5 in. to 6 in.; No. 1 squared tie has a face 8 in. to 10 in., and No. 2, 7 in. to 8 in. The thickness of all ties is generally 6 in. to 7 in., and the length 8 ft. Of course, switch ties are much longer and are purchased on certain specifications, being paid for by contractors on the basis of so much per thousand feet, board measure. In switch ties the companies set forth certain specifications, according to the wood used. The Grand Trunk Railway, for instance, calls for long leaf Yellow Pine, White, Post or Burr Oak, Beech and Hard Maple woods in connection with its switch tie requirements.

One of the greatest developments of recent years in prolonging the life, service and strength of ties have been the establishing of treating plants. Much has been published in the columns of the

Twelve Thousand Cedar Ties Loaded on Barge for Canadian Tie and Lumber Co., Limited, Toronto.

"Canada Lumberman" on the creosote treatment of jack pine and hemlock for cross-ties. Treated ties were first used in Canada about 1896. Since that date a small number have been used each year, but possibly not more than 10 per cent. of the annual consumption. These were all imported from the United States. The first commercial treating plant in eastern Canada was erected in Trenton in 1911 and is known as the Canadian Cresoting Company. It has a capacity of treating 4,000 ties per day. Since then other plants have sprung up and are located at Fort Frances, Ont., and Sydney, N. S., while in the west similar plants exist at Transcona, Van-

couver and North Vancouver, and Winnipeg, Man.

Preservative Treatment of Ties

Much might be written on the wood preservative treatment of ties, and in a recent publication entitled "Creosote Treatment of Jack Pine and Hemlock for Cross-Ties," which is issued by the Forestry Branch of the Department of the Interior and compiled by W. Kynoch, B. Sc. F. E. and J. A. Coderre, B.A., F.E., one or two interesting statements are made. These gentlemen point out that by efficient preservative, decay in ties can be prevented or very greatly retarded and, consequently the life of the tie in service can be increased.

Respecting some objections that have been raised to the treating process, they say: "In connection with mechanical wear the question of heaving of track and the consequent shimming, which necessitates the frequent drawing and re-driving of spikes, has frequently been brought forward as a serious objection to the use of treated ties in Eastern Canada. It has been claimed that where shimming is done ties are often spike-killed before they fail from decay, and that preservative treatment under these circumstances would be merely a waste of money. A point of the greatest importance is that heaving does not necessarily entail shimming. Shimming is only necessitated at certain points where unsatisfactory drainage conditions, combined with the presence in the sub-grade of heavy clay or other soil with high water-holding capacity, cause unequal heaving of a marked character which renders the track unsafe. These points are practically the same every year and are, therefore, in most cases known beforehand from previous experience. Only a relatively small proportion of the total number of ties in track is subject to shimming. Further, trouble from this source is being gradually eliminated owing to improvements in drainage."

One of the veterans connected with the tie industry in Canada is Mr. A. R. Thompson of Belleville, who has been associated with the Grand Trunk Railway for a number of years, and has held the position of chief tie and timber inspector of the system for a long period. Mr. Thompson has a wide acquaintance with forest products men in all parts of the country, and previous to the railways dealing with contractors for their supplies, which system was instituted a few years ago, he bought large quantities of railway timber from sawmill men and woodsmen in all parts of the country. In a recent conversation he stated that about half of the ties now used by the G. T. R. system undergo preservative treatment, and that the principal native timber for tie purposes in eastern Canada at the present time is jack pine, which comes first. A considerable quantity of hardwood is used, the principal varieties being our own native woods, birch, maple and beech.

Growing Use of Hardwood Ties

On the point of using hardwoods, the Bulletin already referred to and issued by the Forestry Department, gives the following timely information: The question of the more extensive utilization of hardwoods for tie purposes is occupying a good deal of attention at the present time. Considerable quantities of hardwoods are to be found on lands from which the coniferous growth has been removed by logging, or on which it has been destroyed by fires, the hardwood growth then replacing the former stand. Hardwoods on account of their relatively high mechanical strength, make very good ties provided they are properly handled in seasoning and receive a suitable preservative treatment. The latter, on account of rapid decay of hardwoods in exposed service, is absolutely necessary. The problem of the utilization of hardwoods for tie purposes in Canada pre-

A Portable Mill in Quebec Cutting Ties and Lumber

gether constitute over 50 per cent. of the total number of ties annually used in Eastern Canada in ordinary years, the reduction of the drain on forest resources which could be brought about by materially increasing the life of these ties is of considerable importance to the country at large. In view of the above it was decided to devote attention to the treatment of jack pine and hemlock before dealing with other woods."

The Life and Durability of Ties

After being left in the yard until properly seasoned, which requires on the average from 4 to 6 months, according to the nature of the timber, the ties are loaded on a tram train and run into the huge cylindrical retorts. At the large creosoting plant in Trenton as many as 1,000 ties can be treated at one operation. Jack pine ties remain in the retorts for about two hours, and to become properly impregnated, a longer time is required for hardwood ties. All kinds of ties undergo treatment except cedar, tamarack, white oak, cherry and chestnut. Previous to the establishment of wood preservative plants on this side of the border, all treated ties were brought in from the United States. The equipment of modern creosoting plants in Canada, as already stated, not only marked a new industrial development, but also brought about an increasing use of Canadian native hardwoods for railway track service.

The white oak is the longest lived of any and will last, on the average, about 15 years. Next comes cedar, with an average duration of 9 or 10 years, and all other woods are in somewhat lessened proportion so far as their longevity is concerned. It is estimated that the life of most softwood ties is extended from four to five years by the creosoting process, or, in other words, if two ties are laid side by side, the one which has been treated, will outwear the other by a considerable period.

The process of treating ties—in fact all lines of woods—has been the subject of considerable discussion in the "Canada Lumberman," and it is not the purpose of the present article to refer in detail to this modern development. In the December 1st edition, 1919, there appeared in these columns an able and comprehensive article, along this line, from W. Kynoch of the Forest Products Laboratories of Canada. It may be stated, however, in passing, that, as a general rule, the preservative treatment lengthens the life of native hardwood ties more perhaps than it does coniferous timber.

All ties are peeled, with the exception of tamarack and Jack pine, before they are delivered f.o.b. cars for shipment. The peeling is done by various processes, with a drawing knife, axe, etc. As to the number of ties that can be barked or peeled in a day, there are some woodsmen who are more expert than others, and also certain woods which can be "skinned" more quickly than the tougher and more tenacious varieties.

The sawn tie or squared tie, as it is usually called, is prefer-

Sidings Cut from Railway Ties in Western Tie Camp

red by the railways to the hewn tie, owing to its evenness, uniformity and general appearance. About 50 per cent. of the pole ties purchased in this section of the country are hewn, and some workers, who are clever with the axe, can hew as many as 100 ties a day, but the average runs from 20 up to 50. Many producers of pole ties turn them out by means of twin slabber, which takes off two sides

Relative Sizes and Shapes of Average Railway Ties

of the log at once. It is then carried on live rolls and transferred to butting saws which cut the log into the required 8 ft. lengths.

It may be asked who furnish all the ties which the railways consume annually. Supplies come from practically all parts of Ontario, Quebec and the Maritime Provinces, and the logs are taken out by sawmill operators, portable mill men, jobbers, settlers, contractors and others. One of the developments of handling ties and providing the railways with a requisite number each year, has been the formation of companies who specialize in this line of service.

One of the newest and best known organizations in Canada is the Canadian Tie & Lumber Co., Limited, whose headquarters are in the Temple Building, Toronto; G. F. McCandless is president of the company, and S. F. McCandless, secretary and sales manager. Both these gentlemen have had a long and varied experience in the railway tie business in the United States and Canada. The firm handle over 2,000,000 ties every year, and have exclusive contracts for supplying the Grand Trunk Railway, the Michigan Central and the T. H. & B., so far as their lines in Canada are concerned, and other large users of ties. The Canadian Tie & Lumber Co. were organized three years ago, and have established a wide connection.

Piling, Loading and Inspecting

All ties are bought f.o.b. cars and some of the methods of piling in the yards and loading cars are illustrated in this article. The railways supply the necessary cars for carrying the ties to whatever point desired and, at the time of loading, an inspector is also on duty to see that the specifications set forth in each contract for so many thousand ties are lived up to.

At present in Ontario the largest number of ties are jack pine, the northern part of the province furnishing the largest quota. Contracts for each year's supply are usually placed in August and September. The contractors and the sawmill men have always worked well together, their interests being closely associated and mutually helpful. Many hardwood logs are so small that they can be converted into ties, and in the case of larger growth, the heart of the log is boxed, and makes an excellent tie, while the cants are converted into lumber of one, two and three-inch thickness. The hardwood operator is thus enabled to get the most, in a productive sense, out of each log, the finer cuts and sidings going into lumber of various grades and the least desirable part of the log being worked up into ties.

In hardwood ties there has been an increase of about 20 per cent. in price during the past few months, but in softwood ties the prevailing quotations are about the same as last year. Between No. 1

Dining Room and Living Room of a Tie Camp

and No. 2 ties, both pole and squared, the average difference in value runs about 20c to 25c.

Some conception of the development and expansion of the use, production and demand for ties on the part of Canadian railways may be gauged from the fact that the G. T. R., over its entire system in the United States and Canada now requires three and a quarter million ties, and a third of a century ago about a million answered all the needs. It is not unusual for several lumbering or logging firms to take out large quantities of ties. Quite a number of concerns in northern Ontario produce from two to three hundred thousand ties each year and without entering into a detailed list, it may be said that some of the largest organizations in this line take out as many as one million ties annually.

Hundreds of thousands of ties are often seen at railway yards and on premises adjoining wood preservative plants. At one time during the past winter there were no less than 785,000 ties in the yard

One of the Yards of the Canadian Tie and Lumber Co. Showing How Ties are Moved and Loaded

of the Canadian Creosoting Co. at Trenton, awaiting "a bath," as the handlers term the present method of treating them, in order to add to their vitality and endurance.

How Much Are You Worth?

By Harold Whitehead

How much are you worth?

Well, what's the answer in your case?

Figure it out for yourself? Your salary represents interest on you. You are the principal and what you earn is the return you get on the principal—yourself—which is invested in your work.

Suppose you earn (and get) \$3,000 a year. That represents interest at six per cent. on \$50,000!

Now, suppose you get \$3,000 a year but only work half your time or only indifferently well. You are worth \$100,000, but have invested yourself at three per cent. instead of six per cent.

Silly thing to do, isn't it? Yet, most people invest themselves at less than six per cent.—and then wail and rail against their hard luck.

Why not give yourself the same consideration as you do money? What would you think of the simpleton who had some money and used it up with no care or thought as to its safety or interest? Yet you probably do that very thing with the most precious capital you have—yourself.

How carefully the investor considers the use to which to put his money. What painstaking care he exercises in studying the market in general and the various offerings which he is considering in particular.

He avoids investing his money in something from which he must soon withdraw because of insecurity or insufficient interest.

Have you ever invested yourself in a job for which you've had to withdraw because it did not give a satisfactory return?

What you would have saved yourself if you had investigated first!

From now, think of yourself as capital to be invested and your salary as the interest on the capital. You will have an accurate estimate of your capital worth from the amount of salary you can command (and earn) in the open market.

Keep your capital growing by exercising the qualities of skill, knowledge and health which you possess, for as you grow in experience and the ability to get results, so will you get your six per cent. on the increased valuation.

Retail Lumbermen Hold Splendid Meeting

Enthusiastic Gathering of Southwestern Ontario Association—New Officers Elected and Live Issues Discussed—The Progress of the Work

Enthusiastic and harmonious was the annual meeting of the South Western Ontario Retail Lumber Dealers' Association, which was held in St. Thomas on May 27th. There was a large and representative gathering and everything passed off remarkably well.

W. A. Hadley, of Chatham, president of the Association, presided and expressed his gratification at seeing such a splendid attendance and announced that business would be proceeded with without delay. B. F. Clarke, of Glencoe, secretary-treasurer of the Association, then read the report of previous annual meeting. The election of officers was next proceeded with, after deciding that the annual membership fee should be \$5.00. W. A. Hadley was nominated for the presidency for another term, but declined the honor. George H. Belton, of London, vice-president, was also asked to take the chair, but stated that it would be impossible for him to give adequate attention to the work this year, but that on some future occasion he would be pleased to act in such a position.

A. R. Sanders of St. Thomas, was then unanimously elected President, while a nominating committee, consisting of Messrs. George N. Kernohan, London, C. H. Belton of Sarnia, and W. A. Taylor of Ridgetown, was appointed to nominate and bring a report of directors for the coming year.

The following now constitute the officers for 1920:

President—A. R. Sanders, St. Thomas.

Vice-President—A. Ludlam, Leamington.

Secretary-Treasurer—B. F. Clarke, Glencoe (re-elected).

Directors—John T. Wallace, London; Col. W. J. Green, St. Thomas; W. A. Hadley, Chatham; J. C. Scofield, Windsor; Chas. Hubbell, Thamesville; George D. McPherson, Merlin; John McGibbon, Sarnia; T. C. Warwick, Blenheim.

What the Associations are Doing?

Horace Boulton, secretary of the Ontario Retail Lumber Dealers Association, Toronto, spoke on the work and progress of that organization and the advantage of forming local branches. The latter had immediate home problems to consider, and where the dealers in two or three towns got together and talked over matters of mutual concern, they became more closely in touch with one another and enthusiastic association workers. With the development of active local branches, he had no anxiety regarding the general welfare and usefulness of the Ontario Association. The more local branches organized, the better for the parent body. The O. R. L. D. A. could assist district associations in many ways by devoting attention to larger affairs such as disputes with wholesalers, parties selling to farmers' clubs, non-fulfillment of contracts, traffic matters, etc.

The O. R. L. D. A. existed to put into effect the combined influence and strength of the dealers throughout Ontario, and to carry

on to completion many matters that might come up first in the local branches. There was no clashing of interest between the local bodies and the provincial organization. Local associations could bring greater pressure to bear on purely local problems that are of special concern to members in neighboring towns or villages. The aims, however, of the district and Ontario bodies were, as stated, identical, but some problems were more concentrated and distinct in certain local sections. "If you can only join one association," concluded Mr. Boulton, "become identified with your local and I feel confident if you do so you will soon see the advantages of belonging to the larger federation of Ontario Retail Lumber Dealers."

Scope and Purpose of the Work

The retiring president, W. A. Hadley, when asked by one of the members what the particular aims of the South Western Ontario Association were, said that one of the chief purposes was for the members to meet on friendly terms and become better acquainted. The organization was not a price-regulating concern in any sense, as such an object would be illegal. There was no law, however, to prevent members engaged in the same line of business coming together and discussing freely and fully such objects as the cost of manufacturing, the handling of yard stock, delivery, service, etc. "Profits are not discussed, as the Federal Government takes care to get away with all that we make." (laughter). "Very few dealers," continued Mr. Hadley, "are conversant with the cost of manufacturing, particularly odd-sized doors, which some might be selling on the same basis as regular stock doors. The lumber dealer to-day should get a fair margin on his stock at present ruling quotations and take into consideration the replacement value of the goods that he handles."

"As an organization," concluded Mr. Hadley, "we can do many things that we cannot carry out as individuals, and belonging to such a body as this places every man in the organization in a better position with his fellow dealers and in his own individual business."

Every speaker paid well-merited tribute to the energy and industry of B. F. Clarke. Secretary of the South Western Ontario Retail Lumber Dealers' Association, and the incoming executive was authorized to see that an honorarium, as a slight recognition for his faithful work, should be given him.

Mr. Boulton announced that with the return of John B. Reid, of Toronto, president of the Ontario Retail Lumber Dealers' Association, from Atlantic City, where he has been spending several weeks, it was proposed to take up a number of matters which were discussed at the provincial gathering in Hamilton in February last.

W. A. Hadley, Chatham, Ont.

Re-elected Director of the Association

Among these was the drafting of a uniform order blank, incorporation of the O. R. L. D. A. and other undertakings.

G. B. VanBlaricom, editor of the "Canada Lumberman," Toronto, gave a short address on the benefits of co-operation and organization, and spoke of the advantages of local branches in creating interest among dealers in the smaller centres. The result was that in the larger body—the Ontario Association—greater strength and activity were developed by reason of such aggressive factors.

Why Lumber Retailers Should Advertise

Chester H. Belton, of Sarnia, spoke interestingly on "Advertising from the Retail Lumberman's Standpoint." Without advertising, he said, nothing great in the business world had been achieved. In the days of our forefathers, who had to clear the bush before establishing their homes, little thought was given to the value of timber. Now the sources of supply had gone farther and farther back and the price was constantly ascending. Our forebears had not thought it necessary to advertise a natural product like lumber, and the same feeling seemed to follow down among a large proportion of the present generation. This was all a mistake. "We should," said the speaker, "keep the need, attractiveness and comfort of a home ever in the mind of the public." The sale of many a commodity had been stimulated largely because it had been advertised. We may think because our business is, perhaps, a small one, and we need not advertise—that newspaper publicity is all right for the big fellow to adopt, but not for us. As a result of the retail lumberman not making use of printers' ink, the ready-roofing manufacturer, the cement man and other competitors had come in with their products to take the place of wood. So extensively had they advertised that in many cases they have encroached upon the legitimate lumber trade.

"Lumber is our chief commodity, and you, gentlemen, should put aside every year a certain appropriation to use in newspaper publicity. We cannot create a want unless we at first create a desire, and we must create a desire in the minds of the people for owning their own homes. If this is not done, they will not build for there will be no incentive. If money is not used to bring comfort to our families then money is of very little use and benefit to us."

Mr. Belton added that the lumber dealer might be inclined to think that people would come to him in any event and that business in his line would not go by the door. Advertising is to get more and more customers to our office and yards, and have them realize that they need what you have created a want for and a desire in their mind to possess. This will not be brought about if people are left to themselves.

"How many retail lumber dealers are advertising to-day? Are creating a desire in the minds of the people to build, or simply trusting to haphazard ideas and methods. We cannot," he continued, "expect to enlarge our business, increase our sales, and compete with others unless we, too, as lumber dealers, adopt publicity, the same as others have done."

As an instance of what advertising will accomplish, Mr. Belton stated that white pine had been used for years for underground sewer construction in New York City, but cypress had taken its place. The latter had been extensively advertised as "the wood eternal," and the phrase had caught on. Although not to be com-

pared with white pine in many points, cypress had gained its foothold because it had been given splendid publicity by a southern association of lumbermen. "If this can be done in large centres," concluded Mr. Belton, "the same can be carried out in smaller ones. I believe, as retailers and as an association, we should all give more thought to this matter of advertising in the press and thus make more widely known the facilities, service and possibilities of the business in which we are engaged."

There was a general discussion regarding the building outlook, scarcity of dry stock, non-delivery of shipments and other matters.

Among those present were W. A. Hadley, Chatham; B. F. Clarke, Glencoe; J. McGibbon, Sarnia; C. M. Smith, Aylmer; W. J. Taylor, Ridgetown; T. C. Warwick, Blenheim; W. R. Stephenson, Appin; M. R. Bogart, Chatham; Col. W. J. Green, St. Thomas; John T. Wallace, London; W. Saunders, Dutton; George N. Kernohan, London; R. Sanders, St. Thomas; A. R. Sanders, St. Thomas; George H. Belton, London; E. C. Penwarden, St. Thomas; Chester H. Belton, Sarnia; G. D. McPherson, Merlin; W. H. Jackson, Tillsonburg; E. G. Lusty, Rodney; J. E. Burge, Sarnia; Chas. Hubbell, Thamesville; E. S. Hatch, St. Thomas; L. G. Jackson, Toronto; H. Boulthbee, Secretary of Ontario Retail Lumber Dealers Association, Toronto, and G. B. VanBlaricom, "The Canada Lumberman," Toronto.

History of the Organization

It is six years since the South Western Ontario Retail Lumber Dealers' Association was organized and the membership to-day is between fifty and sixty. It has followed the practice of changing officers annually, and making every man assume a certain amount of responsibility and do his share of the work. This has resulted in the interest in the Association being kept alive and further adds to its effectiveness and strength. The society has been holding meetings at different points each year. This is the first time that the Association ever met in St. Thomas, and the visitors were accorded a hearty welcome, being entertained to a dinner at the Grand Central Hotel, where the meeting was held. At the close, a cordial vote of thanks, moved by B. F. Clarke and seconded by George H. Belton, was carried, expressing appreciation of what St. Thomas retailers had done to add to the success and enjoyment of the gathering.

In the spring of 1914 a few dealers got together with the idea of becoming better acquainted and studying local problems in lumber retailing. These men were Chas. Hubbell of Thamesville, B. F. Clarke, of Glencoe, L. McPherson, Glencoe, and others. There was no thought then of having other than a small district body, but soon the influence of the little band began to extend over wider ground and the movement gained recognition and prestige. From this small beginning the present association has grown until it now takes in all the south western peninsula in Ontario from London to Windsor, and as far north as St. Marys. The first annual meetings were held at Chatham, the succeeding year in Windsor, next year in Sarnia, next in London, and last, but not least, in St. Thomas. The dealers of Sarnia have extended a warm invitation to the Association to meet in the border city in 1921. The first president of the Association was F. H. Laird of Dresden, and the succeeding occupants of the presidential chair have been Chas. F. Hubbell, Thamesville; W. J. Taylor of Ridgetown, W. A. Hadley of Chatham, and now A. R. Sanders of St. Thomas.

The Importance of an Efficient Cost System

Retail Lumbermen Should Learn the Truth About Their Business, Know It All and Then Guide Themselves by Known Established Facts

That you must know kinds and grades of lumber.
 That you must know its adaptability for certain specific purposes.
 That you must know how to buy this lumber properly.
 That you must know how to store it properly in your yards and sheds.
 That you must know how to sell it properly.
 That you must know how to deliver it economically and efficiently.
 That you must know how to give credit to those worthy of credit.
 That you must know how to advertise and in various ways increase your business year by year.
 That you must know how to finance your business properly.

In the foregoing list one thing on which many lumber dealers are weak is the knowledge of how to sell properly. I do not mean by this to criticize your salesmanship, but what I mean to speak of is the alarming lack of cost knowledge that prevails among lumber dealers, and prevents them getting a proper selling price and makes them timid. Yes, it does make you timid. You figure up a price on a bill of lumber and the buyer may say to you that he can buy it cheaper elsewhere and you are likely to weaken. To get cured of this timidity and lack of confidence, and to sell properly, you must know your cost, and you must not only know it at the end of the year, but you must know it at the end of every month, and at the end of every month this cost of handling lumber must contain all the items that you sometimes hold until the end of the year.

I am aware that most of you have just closed up a year's business that has very likely been a satisfactory one. You have had a heavy demand for lumber, and you have been doing your buying on a continually advancing market. It may be that some of you feel; we are satisfied to go along as we are; what is the use of going more deeply into cost matters than we have already. I entreat you not to take this view. It is just as necessary to be guided by cost knowledge today as it is when business is dull. When you are doing business on an advancing market you should still be able to say, "I am making so many dollars per thousand purely on the operation of my lumber business, and not counting any purchase profits that I have been fortunate to make."

There are some of you who perhaps dread the work and detail that may be entailed by running your business with modern cost methods, but I can assure you that there will be nothing irksome or difficult about it. There is nothing mysterious or forbidding about the study of costs. It will be the most interesting part of your business if you go about it in earnest.

The Advantage of Good Cost System

I wish to outline to you briefly what would take place if you were to have a cost accountant who is acquainted with the lumber business go to your plant and install a cost system. He would first look over the physical property so as to know the various lines that you handle besides lumber, and become familiar with the location of the various commodities. He would then look over your present method of accounting so as to see what you are doing. Then he would be able to take up with the owner and executive a plan for rearranging your accounting system in such a way that every month you would automatically get the knowledge that you require. From then on all work would be done in consultation with the owners and executives and when it was completed they would feel that they had been instrumental in installing this cost system, and they would be right. They would understand it, even though they are not familiar with bookkeeping.

One of the matters that would be taken up would be the depreciation which you should charge into the expenses each year, and an amount would be arrived at that would be fair to yourselves, fair to the government, fair to your industry.

The question of salaries would be taken up and after discussion the owners and executives would decide on salaries for themselves that were fair and commensurate for the responsibility of conducting the business, where perhaps they had been drawing nominal salaries.

We would take up the matter of a reservation for bad accounts

and arrange to charge up each month a certain sum that would be sufficient to take care of the possible bad debts of the coming year.

We would take up the matter of shrinkage that inevitably occurs during the year in a lumber yard, and arrange a per cent. to cover such shrinkage.

Then we would analyze an entire year's business and all the actual expenses of conducting the business would be put in the proper place; if you handle coal, if you handle masons' supplies, if you have a planing mill or a fabricating mill or if you do a wholesale lumber business, the expense accruing in these departments would be kept separately.

How the Advantages are Divided

In the end, to take care of the lumber business, you would have three divisions of expense; one would be the expenses necessary in unloading lumber from cars and getting it into the pile and sheds; the next would be the expense made necessary to load this lumber on your wagons and trucks and deliver it; the third group of expenses would be the administrative and selling expense of your business. In the course of our analysis we would determine how much lumber you had handled during the period. This is one thing that I very rarely find at a lumber yard. It is absolutely necessary that this record of footage should be kept; not only what you have on hand at inventory, but the footage that you purchase, and the footage that you sell.

We are now ready to present this year's business which we are analyzing to you in just such a manner as though you had kept that year according to our plan, and are prepared to give you the facts. We will take the group of expense accounts that were necessary to get lumber into the pile and we will divide into it the number of feet that you bought, and it may show \$4.00 per thousand. We will take the group of accounts that were made necessary to deliver your lumber and divide into it the amount you sold, and we will get perhaps \$3.00 per thousand. Now then, we will take the average cost of the lumber that you sold and it might be \$60.00 per thousand. Now to this \$60.00 we must add \$4.00 for yard handling, \$3.00 for delivering, which makes \$67.00 of cost taken care of so far. Then we take the expense of administering the business and selling the lumber and apply them as a per cent. on our previous figures, and we will say that they amount to 10 per cent. or \$6.70 per thousand. This gives us a total cost of handling lumber at your plant of \$13.70, which added to the \$60.00 average cost would give a total cost of \$73.70. If you think you should make 10 per cent. profit you would add \$7.37, which would be a selling price of \$81 for \$60 lumber.

Now we are ready to start on the new method for the coming year, and we will begin by using these figures and as the months go on we will correct these figures as may be necessary from the knowledge that you will get every month in exactly the same way as we get these from the previous year. You understand, of course, if lumber at a certain price figures out that you should sell it for \$81 you could use your judgment about making it a more natural price, such as \$80 or \$82.50. Your cost will know to a penny, but you are not tied on the selling price.

Looking Contingencies in the Face

In pursuing this method in the coming year you are taking care of your contingencies and looking them squarely in the face in the month of January, and February, etc., instead of waiting until the end of the year and trying to forget them and doing business on just what you pay out in cash. In the past when you have had a good year you rearrange your first profit and loss statement by handling these matters after the year is closed. All during the year you do business without knowing the truth or else ignoring it, and the consequence is that you continually tempt yourselves to make prices that are not justified, but you console yourselves with the idea that they are profitable. In doing this you wrong yourselves and you wrong the industry.

Let us take an example of a lumber yard owned by two men that is selling five million feet of lumber, and we will say that the average selling price of this lumber is \$75, which makes the total sales \$375,000. We will say for example that a fair and commensurate salary for these two men as executives and owners of this business or representing owners, under present conditions, was \$6,000 a year each. But at the beginning of the year these two men would

get together and say, now here we will just draw nominal salaries this year, say \$2,500 each, and at the end of the year we will see how we come out. The consequence is that all through the year they are leaving out of their cost a certain sum of money that in twelve months amounts to \$7,000 or \$1.40 per thousand on the output. Now, if things work like checkers they are leaving \$140 out of their true cost, thereby deceiving themselves and hurting their competitors.

We will say that this firm's previous five years experience had shown an average of \$5,000 a year on bad accounts, but they start in this year by making no reservations. At the end of the year they are very likely to find that it is necessary to write off \$5,000 worth of accounts. This means another \$1.00 per thousand, which all through the year they left out of their cost.

We will say that this lumber operation is entitled to a depreciation on its buildings, equipment, trucks, etc., of \$5,000 a year, but they do not touch this the end of the year. Here you have another \$1.00 per thousand that is left out.

We will say that in handling 5,000,000 ft. of lumber that in various ways through the yard there is a shrinkage of 2 per cent. or 100,000 ft. We will say that this per cent. would be figured on an average cost of \$50 per thousand and here you have \$5,000 or \$1.00 per thousand that is not taken care of.

The above items amount to \$4.40 per thousand. If you figure out that you can handle lumber for \$10 per thousand why the real truth of it is that it is costing you \$14.40. Why not know this all through the year, and if you buy lumber at \$50 per thousand that you have got to add \$14.40 to cover your expenses before you make a penny?

If you feel that you should have a clean profit above cost of 10 per cent. you would add \$6.40 to get your selling price of say \$71.00.

Cost Knowledge From Your Figures

Using the method many of you use at present time you would add only the \$10 per thousand and then add 10 per cent., which would make a selling price of \$66, or really \$5 too low. Still, at the end of a normal year you might show a profit, but it would not be profit enough to give you the salaries you had left out and to take care of depreciation and bad accounts, without making it show a loss. If it was an abnormal year, such as 1919, you might show profit enough to take care of these items, but it would not leave you what you should have made on your operation.

I am not criticising your brains and energy. You have more than men in other lines or you could not get along at all. You have to continually be determining costs from experience and judgment instead of from figures. Why not get all that you can in the way of information and cost knowledge from your figures, such as inefficiencies, and then you will get a full return in proper profits for the brains, energy, and money you have invested in your business.

Get your feet on the ground. Know the truth about your business, and know it all. Then guide yourself by these known facts. It may be difficult at first because perhaps you have some competitors who are still using the old methods, but you can go to these competitors if you have actual figures that represent the truth, and you will find that you can talk to them as you have never talked before. You will find that the knowledge that you gain from your business by a proper cost system will unconsciously instill courage into you. It will stiffen your back bone, and it will make you want to co-operate with your competitors more than you ever have before. This same confidence will enable you to explain your prices to contractors and other customers; if they think your price is too high you can call them into your office and show them your books and how those prices are arrived at, and they will meet you. Every buyer wants to feel that the person he buys of is making a fair profit, but we have not allowed them to have that feeling. The discrepancies on bids for a bill of lumber have been such as to make the buyer suspicious. This will all be changed in a few years through co-operative cost systems and the buyers will have a confidence in you that will be inspired by the confidence you have in yourself and the open way in which you deal with them.

When you first start on this work and get it under way you will be very anxious to have this feeling spread over the entire industry.

I sometimes think of cost knowledge at a plant as a light which has been lit and according as you use it the light grows brighter and brighter until it illuminates every corner of your business, and gentlemen, this light is not stingy or selfish. Its rays lighten up your neighbor and through you he will find the benefit it has given and soon a new light is above his place.

Moving the Product Cheaply and Quickly

Cutting the cost of manufacturing and of handling the output is one of the most important ways of effecting savings to-day, when so many factors tend to increase cost. In the lumber industry, with its bulky product, being turned out quickly and in such large quantities daily, this is particularly true. Transporting the product from

mills to yards and to loading platforms is made much simpler and cheaper by the use of motor power. The industrial tractor has quickly become a recognized part of the labor-saving equipment of the modern mill. In this age of mechanical motive power which is replacing old laborious hand methods and inconvenient and expensive horsepower, lumbermen have been quick to see the advantages of the handy industrial tractor around mills and yards. In many other industries where the quick and convenient transporting of bulky or heavy materials in quantities from one part to another of a large plant is a necessity, the new tractor has found a wide field of usefulness.

Years of study and experiment by experts, not only in methods of efficiency, but in construction of motors, have developed the industrial tractor. In the lumber industry one tractor, using several easily detached trailers, greatly cuts down the labor and speeds up the rate of handling the lumber cut. While the tractor is making a quick trip with one loaded trailer, the freshly-cut lumber is being

An Industrial Tractor on the Move

piled on another, ready for the second trip as soon as the tractor returns. Operated in this way a saving of two horses and three men in moving lumber is effected by the Tupper & Steele Industrial Tractor. This tractor, manufactured in Vancouver in a well-equipped, modern plant, has been adopted by many of the large mills, shipyards and other large industries. In every case the greatest satisfaction has been given and users strongly recommend it.

Capable of carrying a load of one ton itself, and at the same time hauling three to four tons on trailers, the Tupper & Steele Industrial Tractor is itself an example of efficiency and economy in construction. It is simple in design, without sacrificing strength, power or durability. Every unnecessary moving unit has been dispensed with, reducing weight and cutting down wearing of parts. Tremendous power is developed by its system of gear reductions, and with its short wheel-base the tractor can turn in very small radius, an important feature in a crowded mill yard. Hard rubber tires reduce the cost of upkeep of roadways and are themselves seldom in need of repair. A set will run over 20,000 miles on ordinary conditions. Checking reports of various firms using the Tupper & Steele Industrial Tractor, it is shown that operating expenses over a period of a year or more run from \$1.50 to \$2.00 per day, according to the nature of the work.

This tractor is helping to solve labor and transportation problems in many mills and industrial plants to-day.

The Passing of Mr. J. A. Sinclair

John Archibald Sinclair, who was a widely-known and highly esteemed lumberman, died recently at Glen Blair, Cal. He had just recovered from a severe cold and was able to be out when he was stricken very suddenly with heart failure and passed away in a few minutes.

The late Mr. Sinclair was born in Douglastown, N.B., in 1849, and in his early youth gained experience in the lumber business with his brother, Edward Sinclair. In 1876 he went west and settled in Eureka, Cal., where he secured his first employment, tallying lumber in a shipyard. He then entered the employ of the Occidental Mill Co. first as an accountant and afterwards securing an interest in the firm. He sold out his holdings in 1888 and next went to Scotia, taking an interest in the Pacific Lumber Co. and remaining there as manager of the plant until 1898. During the following four years he was interested in various development schemes and built a shingle mill at Elk River, Cal. In 1902 he was associated with others in the purchase of the Navarro Lumber Company's timber tract and plant, and the following year they purchased the Blair property.

Giving Greater Impetus to Safety Movement

What Co-operation and Leadership Can Accomplish—Record in the Pulp and Paper Industry is Better Than That in Lumbering Arena—Situation Reviewed

Mr. S. Price, of Toronto, chairman of the Workmen's Compensation Board, in a recent article in the "Canada Lumberman," reviewing the accidents and fatalities which occurred in the industry during 1919, stated that the record was an unfavorable one in both the logging and sawing end. The total accident cost in logging and sawmills in mixed operations was \$414,363 last year as against \$229,716.61 in 1918. Mr. Price remarked that the experience in both sawmills and logging was bad, but that it was considerably worse in the sawmills than in the logging. One of the contributing causes was, no doubt, a large proportion of inexperienced help that had to be used, a great deal of it being foreign labor. Other reasons given were the careless attitude of a great many workmen following the war and also the present social and industrial unrest. The total wage expenditure in the lumbering industry in Ontario during 1919 was \$19,806,857.00, and the number of full-year workers was 16,930.

The Workmen's Compensation Board, with a view to reducing the number of accidents, has made arrangements by which particulars of all compensable accidents are being sent from time to time to the Lumbermen's Safety Association. This will afford the Safety Inspector a better opportunity of keeping in touch with what is happening in the industry and suggesting preventative measures.

Some interesting lessons in the Safety movement and what co-operation and leadership in this matter will accomplish is evidenced in the work of the Ontario Pulp & Paper Makers' Safety Association. This body, which comprises the thirty-five pulp and paper mills in Ontario, has its own Safety Engineer and Secretary, Mr. A. P. Costigane of Toronto.

At the recent annual meeting of the Association, Mr. I. H. Weldon, president of the Provincial Paper Mills, Ltd., Toronto, referred to the work of the past year, stating that education and co-operation were still the watchwords, and it was gratifying to know that the work along educational lines had become more intensive during 1919 than ever. Meetings of employees were organized on a larger scale, and judging from the year's statistics, their influence was beginning to show in the downward accident curve. Great strides had been made in securing the co-operation of employees in those mills where the management was right behind the safety movement, but there were still instances of where the desired support of the management was not forthcoming. Mr. Weldon remarked that one would think in the latter case a study of the annual report issued by the Workmen's Compensation Board, which shows clearly the ever-increasing cost of compensation, would carry the conviction that accident prevention pays.

Removal of Safety Appliances

He recalled the number of accidents caused by directly or indirectly by discarding or removing safety devices provided. One would imagine if an employer is willing to provide safeguards, that in the event of an accident taking place owing to wilful misuse of such safeguards, a portion of the burden caused by such accidents should be borne by the individual. If a lower rate of compensation was paid to the party injured under such circumstances, there would be a decrease in the frequency with which safety devices are discarded or removed by employees.

Mr. Weldon also referred to the educative work done in the form of a "Safety Calendar," which was the first of its kind produced in Canada. These calendars were hung up at home and in the mills, and became a daily reminder of the importance of carefulness. He next touched upon the merit-rating system which had been recently introduced and seems to be giving general satisfaction. Under this system each firm's assessment is regulated by the cost of their own accidents. Companies with a good accident record received a merit rebate, whereas companies whose accidents during the year cost more than the estimated amount are called on to pay a supplementary assessment.

Mr. A. P. Costigane, Safety Engineer and Secretary, in his report, said that the difficulties of carrying on the work of accident prevention during the year had been somewhat lessened owing possibly to more stable conditions in the labor market. The difficulty of obtaining skilled help was not now so great, large numbers of skilled men having returned from service in France to the industry in which they were formerly engaged. This fact alone helped toward a reduction in accidents, as during the war period the victims of a large

percentage of accidents were green men attracted to the industry at that time by the high wages being paid.

During the year a marked improvement was shown in the attitude of superintendents and foremen toward the movement. In the majority of cases not only was a sympathetic attitude exhibited, but active assistance was given in organizing meetings and making suggestions for improving conditions; especially was this the case where the management let it be clearly understood that the company was sincerely behind the movement.

Good Effect of Safety Rallies

There are unfortunately still a few cases where official apathy prevents progress, declared Mr. Costigane. Under these circumstances the only thing to be done is to confine our efforts to the guarding of physical hazards. Quite a number of safety rallies were held during the year, mostly in the western and northern parts of the province, in fact in all the mill towns, in which a standard moving picture machine could be secured for an evening. These meetings were all well attended, and in several instances repeat shows had to be given to accommodate those who had not been able to gain admittance to the first show.

Taking the pulp and paper industry only and including woods operations, the total number of compensable accidents have increased from 753 and 20 deaths, in 1917, to 1461 and 16 deaths, in 1918, equal to an increase of 94.02 per cent. in non-fatal, and a decrease of 20 per cent. in fatal accidents, but during the same period the total number of full-year workers increased from 9,650 to 10,045, equal to 4.09 per cent. The total time lost increased from 21,094 days, in 1917, to 22,489 in 1918, equal to 6.6 per cent., showing the severity of accidents only slightly on the increase.

The increase in the total number of accidents, in 1918, is accounted for by the large percentage of accidents requiring medical aid only, included in the figures. For the year 1917 only 130 such accidents were included, as the medical aid amendment to the Act only came into force during said year, whereas in 1918 the number of such accidents included was 628.

The total amount collected from class 2, (pulp and paper mills), was \$136,565.72, from which was deducted a debit balance of 2,167.81, brought forward from 1917. Of this amount \$38,141.96 was paid out in actual compensation, \$24,753.84 was taken as the capital value of pensions awarded, \$3,917.51 was paid to the Safety Association, \$1,616.93 for administration expenses, \$2,875.00 for deferred compensation, \$13,584.80 paid for medical aid, \$1,116.57 for disaster reserve, \$15,172.85 for continuing disability, \$20,235.92 for outstanding accidents, \$2,966.79 for estimated medical aid, making a grand total of \$134,397.91, charged against the class, making a provisional balance of \$10,015.74 to be carried forward.

An Analysis of Accident Chapter

The total number of accidents, exclusive of woods operations, reported by the pulp and paper mills during the year 1919 was 1032 non-fatal and 8 fatal accidents, compared with 1124 non-fatal and 11 fatal for the year 1918. This means a decrease of 8.2 per cent. in non-fatal and a decrease of 27.27 per cent in fatal accidents. During the same period the total number of full-year workers increased from 7064 in 1918 to 7159, or an increase of 1.3 per cent. The total time lost decreased from 18,650 days in 1918 to 14,251 in 1919, or in other words, 23.5 per cent.

The figures are satisfactory in so far as they indicate that we seem to have passed the peak of yearly accident increase and have started on the downward curve, concluded Mr. Costigane. Notwithstanding the fact that the number of full year workers for 1918 and 1919 is practically the same, the figures quoted above show a decided reduction in both frequency and severity of accidents in the pulp and paper industry during the year 1919. Possibly the improvement in labor conditions since the war came to a close will mean a more decided downward curve next year.

The annual convention of the National Association of Railroad Tie Producers was held recently in Chicago, when there was a representative attendance and officers were elected for the coming year. It was decided to hold the next convention in San Francisco, Cal., on January 27th and 28th, 1921.

Production Must be The Aim of Lumbermen

Expedients of All Kinds Are Being Tried to Correct Present Situation but Without Avail—No Practical Remedy Except Through Much Greater Output

By Dr. Wilson Compton, Chicago, Secretary-Manager of the National Lumber Manufacturers' Association

Dr. Wilson Compton, Secy.-Manager,
National Lumber Manufacturers' Association

War, it seems, does not end when it is finished. When it involves such stupendous social and political readjustments, as has the late war, the struggle to achieve for peace-time industry a stable basis for the resumption of what is left of its normal relationships, is quite as difficult a task as conducting the war itself.

War does more than upset industrial organization, disarrange the channels of distribution, and throw out of normal balance all financial arrangements. It confuses the minds of men. It derails men's judgment of things. It causes imagination, sentiment, and fad to prevail over reason. Fantastic and impossible ideas of immediate social regeneration lead to equally fantastic and impractical proposals. Some of

these find their way into legislation. And thereat well-meaning but misguided men come to believe that all people may be legislated into prosperity and happiness, if only the right kind of laws could be passed.

This is a world-wide and not an exclusively American phenomenon. "Hope springs eternal" and as long as men the world over think they can get "something for nothing" or that governments and legislatures can legislate the world into prosperity, just so long will people be deprived of the very things to which they most aspire—happiness, peace and plenty.

It is a striking fact, I think, that so many men who have always heretofore been accustomed to work, are to-day trying to find some way to get more by giving less. This is par-excellence the doctrine of non-work that is threatening the vital social and industrial processes of the world.
